'By and by after we have worked out all these facts for buildings, for highways, for other types of structures and have standardized facts for the various sizes of contracts, say fifty thousand, one hundred fifty thousand, two hundred fifty thousand, a half million, a million ,etc.—and when those facts are known not only to the constructor, but the engineers, the architect, the banker, the owner, the material supply and equipment men, (generally by means of a questionnaire), you find out what resources a man must have available for any particular contract. It is necessary, sometimes more vital to know that the constructor has a trained supervising organization available for the prospective contract than to know about his physical resources and his own skill. You know whether the bidder is justified in taking the contract or whether he is not. The fellow who is not is the irre-

sponsible man. Thus as the uncertainty is eliminated by facts, credit can be curtailed by each class of lenders to safe limits.

'The above suggestion of education and publicity tends to render all more conservative and to set up a definite standard for wisely extending credit or justification for withholding it where it is not deserved.'"

ANOTHER MONTH'S BUILDING TRAILS LAST YEAR'S FIGURES

Nevertheless, June Volume of Business at Indianapolis Is the Best Posted So Far This Year

June building in Indianapolis showed improvement over that of May and the other preceding months of 1929, turning in the best monthly volume of new work so far recorded this year. That was the one redeeming feature of the past month's building report. However, the figures submitted by Mrs. Clara Oxley, statistician for the city building inspection department, ran true to the form that has prevailed steadily each month since the first of the year, they trailed the figures recorded for the corresponding month a year ago. In June, 1928, the estimated valuation on the 983 permits issued totaled $2,321,913 while last month there were but 837 permits granted for a valuation of $1,986,432, the drop-off being 146 permits and $335,481 in the estimated amount of money involved.

An analytical check on the work launched shows:

Accessory buildings, 136, $55,581; apartment buildings, 3, $16,700; business buildings, 21, $286,025; dwellings, 118, $568,200; industrial buildings, 3, $289,000; miscellaneous work, 133, $87,348; public buildings, 1, $490,000; repairs, 422, $193,578.

A tabulation of the monthly volumes of new work for which permits were issued for the first six months of this year together with the total recorded for the first six months of 1928 are shown below:

Month	Per.	Est. Val.
January	472	$ 595,010
February	414	887,898
March	804	1,930,185
April	969	1,300,741
May	907	1,658,779
June	837	1,986,432
Total 6 mos., 1929	4,403	$ 8,359,045
Total 6 mos., 1928	5,707	11,380,780
This year's arrears	1,304	$ 3,021,735

BIG TIME HAD BY THOSE OF THE HUGH J. BAKER AND COMPANY

Well-Known Indianapolis Firm Holds Annual Mid-Summer Golf Tournament

"Fore!"

That was the slogan, the battle-cry, the rallying call to which the employes, branch managers, et al., of Hugh J. Baker and Co., well known fireproof building specialties firm of Indianapolis, responded Monday, July 1st.

And, having responded, the whole outfit went zipping up State Highway Fifty-two to Lebanon, Ind., and out to the Ulen Country Club for the company's annual summer golf tournament.

It was a jolly and happy affair for the crowd who for the day took the well-known Scotch pastiming and let business drift for the time being.

While no "holes-in-one" or any "breaking of par" was recorded, nevertheless, the seven foursomes who participated in play had some great sport. The winners for the day were: First (low net), Roger A. Hay of the Ft. Wayne, Ind., office, Silver Trophy Cup, also a Suede Leather Sport Jacket, the President's Prize. First (low gross), Eugene E. Rich., Indianapolis Sales Department, Target Rifle, the Directors' Prize.

The day's festivities closed with an evening dinner at the club house. There were forty-three in attendance including, besides the Indianapolis force, the men from the branch offices at Chicago, Ill., Cincinnati, and Dayton, Ohio, Decatur, Ill., Evansville and Ft. Wayne, Ind.

ARCHITECTURE AN IMPORTANT FACTOR IN THE BUILDING SCHEME

Small Builder Should Be as Much Interested in It as the Man Who Builds a Mansion

The science of architecture is one without which the world would, probably, still be living in mud houses with thatched roofs. There would be no skyscrapers, no beautiful homes, no wondrous cities, nor many of the comforts of living which people today consider necessitiess.

Architecture is a combination of the exact sciences and the fine arts. An architecturally correct building or home is as much a thing of beauty as any landscape by Corot, any figure by Rodin or any symphony of Beethoven. In order to be correct from an architectural viewpoint it must possess harmony of line and proportion of mass; it must be strong structurally; it must be correctly situated with respect to its surroundings, and it must possess color in keeping with the subject.

The small home owner should be as vitally interested in the architecture of his new home as the millionaire real estate operator is interested in the architecture of his latest skyscraper office building. Is it conceivable that the builder of a huge office building should go to a concrete or steel worker and say: "Bill, I want to build a building about 32 or 38 stories high. I've got a piece of ground down on Main street that I guess is about 100 feet wide by 165 or 168 feet deep. Guess you'd better go down about 75 feet for your foundation. Oh, yes! I suppose you'd better leave space enough for an elevator, and, of course, I'll want store space downstairs, and offices upstairs. You've got the general idea, though, so go ahead and let's get busy."

Sounds ridiculouss, doesn't it? Yet if one drives around his city any afternoon he will see countless homes which offend the sense of proportion or beauty—houses that seem restless and uncomfortable; houses with gingerbread ornamentations here and there, which are just as modest and retiring as so many bandaged thumbs. Or he'll see a home which bulges in unexpected places, from a tower or porch, or a room, which seem to have been stuck on as an afterthought.

In addition to the advantages of pride in ownership and comfort in living, the house correct architecturally has a greater resale value and suffers less depreciation than one built haphazardly. Being correct in design, age does not dim its grace and dignity; rather, it gains a mellow charm which increases with every year.

The family intending to build a new home should satisfy itself on the following points before a contract is let:

1. Will our new home, when completed, be correct from an architect's viewpoint?

2. Are our plans and specifications complete enough to avoid any controversies, and to assure us that we are getting our money's worth?

3. Will our home be well constructed, so as to minimize the inevitable yearly depreciation?

4. Will its interior arrangement be such that it will appeal to the majority of people and thus have a ready resale value?

Since the small home owner is entitled to sound architecture, but hesitates to employ an architect because he fails to appreciate what an architect and his services mean to the prospective builder, it does seem a pity the real message of architecture can not be gotten across impressively to the layman at large.—(Houston, Tex., Post.)

PROMISE OF A GREAT DAY HELD FORTH TO STATE ARCHITECTS

Mid-Summer I. S. A. Meeting and Special Outing at Michigan City July 12

Next Friday is Indiana Society of Architects Day, and what a day it promises to be. Think of it; out at the Long Beach Country Club near Michigan City, with old Lake Michigan rolling, tossing, lapping and the lake breezes wafting in to temper the effects of the July sun.

There have been I. S. A. summer meetings before but none of them with the setting of the aproaching one. Here is an opportunity for a delightful day with the members of your profession and an ideal week end trip. The whole is made to order for a good time.

Last February at the annual meeting of the I. S. A., at Indianapolis, Architect John Wright, of Michigan City, extended an invitation to the state architects' association to hold a mid-summer meeting up along the lake and the matter was taken under advisement. At that time, with winter all about and the wind howling around the corners of the Columbia Club at Indianapolis, mid-summer seemed a long way off and the thought of Lake Michigan and her whistling winds sent a shiver up one's spine. That was then, but this is now. Winter winds and snow and ice are gone, in their place has come sunshine, summer days and the lure of the open places. What more attractive than a day up along the beautiful Indiana shore of Lake Michigan? That is what the Indiana Society of Architects has planned for its members.

There is to be a Board of Directors meeting in the morning to which all I. S. A. members are invited. This session will be held at the Hotel Spaulding in Michigan City following which there will be a noon luncheon at the hotel.

Then the fun starts. After lunch all visitors will be conveyed by autos out along the beautiful lake shore drive to the country club where there will be golf, swimming and other recreation. In the evening there will be a special dinner, entertainment and a featured speaker.

Don't let the worry of having to dress up stop you. It will be an informal affair, sports clothes or business wear will be in order. The main idea is to carry on in such a way that all will have an enjoyable time.

Think it over, think seriously, conclude to go and write to Secretary George Wright to that effect, or notify Fred Ahlgrin, Michigan City, of your intent.

THE SKYSCRAPER IN EUROPE

It's Need Not Felt Yet

A firm in Manchester, England, proposes to erect a 17-story "skyscraper," and the Manchester Council is dubious about it. Suppose there was a fire, how could the fire department squirt water to such a height? Until this question is answered satisfactorily, Manchester will have no tall buildings.

The statement has been made that there is not a modern skyscraper in all Europe. There are good reasons. Most of Paris was built before the days of steel and concrete, when a seven-story building was about the limit of safety for stone, bricks and mortar; and because Paris was circumscribed by fortifications, a great part of it was built up to the legal height. Thereafter, the laws of beauty and uniformity came into play. Modern London grew up not as a city, but as a collection of small towns that spread until they touched one another's boundaries. It is a great, sprawling place which has never felt the necessity for tall buildings. So with Berlin. The skyscraper was born in New York as an economic necessity. Lower Manhattan, where the shipping men, the brokers, the financial interests had to be, was narrow and congested. Even after the retailers were crowded north, there was not room to grow in any direction but upward. So the skyscraper came. Thereafter in other cities, high land values and a certain amount of civic pride, caused the erection of tall buildings.

Paris is spreading into suburbs in every direction. London is still a vast collection of scattered communities with room for growth. Berlin has plenty of room. The economic urge for tall buildings is not yet strong in Europe. Fire protection is a minor consideration, since each skyscraper is supposedly fireproof and has its own installed methods of fighting, even automatically, any blaze that might develop. When tall buildings become absolutely necessary, Europe will have them, and until that time she is getting on nicely without them.—(Bulletin Michigan Society of Architects.)

WHY NOT?

One Answer to Request for Preliminary Figures

A contractor received an inquiry from a surgeon who wanted preliminary bids on several different sketches, with alternates for all kinds of materials and finishes, relates Roger Allen in Architectonics. The contractor wrote back: "Am in the market for one operation, for appendicitis, one, two, or five-inch incision with or without ether; also with or without nurse. Quotations must include putting appendix back and canceling the order if found sound. Successful bidder is expected to hold incision open for 60 days, as I expect to be in the market for an operation for gall stones, and I want to save the extra cost of cutting."

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

***Office Building:** $1,000,000.00, 9-stys. and bas., southeast corner Maryland and Meridian streets, Indianapolis. Archt., D. A. Bohlen and Son, 1001 Majestic Bldg., Indianapolis. Owner, Meridian and Maryland Realty Company Leslie Colvin, president, 823 Continental Bank Bldg. Plans completed; wrecking old building. General contractor, Leslie Colvin, 823 Continental Bank Bldg.

***School Buildings** (4 dormitory buildings and superintendent's residence): $425,000.00 (appropriation for all work de-described herein), 75th street and College avenue, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Owner, Indiana State School for the Blind, George S. Wilson, superintendent, 40 East North street. Indianapolis. Bids in; will award contracts Wednesday, July 10th. Low bidder on general contract: Service Construction Company, 301 Castle Hall Bldg., $277,-433.00; on heating and ventilating: Freyn Brothers, 1028 North Illinois street, $55,-686.00; on plumbing, Freyn Brothers, $45,-901.00; on electrical wiring, Charles L. Smith Electric Company, 122 South Pennsylvania street, $25,380.00, all of Indianapolis.

***Factory Building:** $200,000.00, 1- and 2-stys. and bas. (103,000 sq. ft. of floor space), Martindale and Roosevelt avenues, Indianapolis. Archt., Charles E. Bacon, 605 Odd Fellows Bldg., Indianapolis. Owner, U. S. Corrugated Fibre Box Company, H. J. Lacey, president, 1315 Martindale avenue. On working drawings; plans ready for bidders about July 10th; will award contracts about July 20th. Reinforced concrete exterior walls, composition built-up roof, steel sash, steam heating system, concrete floors.

***School Building:** $50,000.00, 1-sty. and bas., 72x91 (4 rooms), District School No. 15, Bridgeport, on National road, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving new bids to 2 o'clock p. m., Thursday, July 25th. Brick, fireproof construction, terrazzo corridors, hollow tile, stone trim, composition built-up roof, steam heating plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

***School Building:** $31,250.00, 2-stys. and bas., 45x63 (4 rooms), District School No. 1, Flackville, Lafayette road, south on 30th street, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving new bids to 2 o'clock p. m., Thursday, July 25th. Brick, semi-fireproof construction, stone trim, composition built-up roof, steam heating plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

***School Building:** $30,750.00, 1-stys. and bas., 69x71 (4 rooms), District School No. 8, Rockville road at Garden City, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving new bids to 2 o'clock p. m., Thursday, July 25th. Brick, semi-firepoof construction, stone trim, composition built-up roof, steam heating plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

***Church Building** (addition and remodeling): $50,000.00, 2-stys. and bas., Ames, Iowa. Archt., A. A. Honeywell, 413 Peaway Bldg., Indianapolis. Owner Congregational Church, Edgar V. Collins, care of Iowa State College, Ames, Iowa, chairman of building committee. Owner is receiving bids on the Sunday school unit to Wednesday, July 10th. Will not build auditorium addition until next summer. Consists of new parsonage, 2-stys. and bas., brick, stone trim, slate roof, plumbing, entire new steam heating system, remodeling church auditorium, addition to Sunday School unit, remodeling Sunday School rooms, remodeling tower new composition built-up roof, structural steel, steel sash.

***Church Building** (auditorium remodeling, fixtures): $10,000.00, Owensboro, Kentucky. Archt., A. A. Honeywell, 413 Penway Bldg., Indianapolis. Owner, First Christian Church Congregation, Rev. Howard S. Stephenson, pastor, 616 St. Anne street, Owensboro, Ky. Will start work about July 10th. Owner will build by day work and award all sub-contracts. Work consists of new chancel, installing pipe organ (already purchased) plastered grilles, millwork, new electrical fixtures including 15 lanterns.

***Consolidated Grade School:** $50,000.00, 2-stys. and bas., Noble township, Shelby county. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, Alfred C. Howe, trustee, Rural Route 3, Flat Rock. Receiving new bids to 1 o'clock p. m., Thursday July 18th. (See legal advertisement in this issue.) Brick,

STEEL INSURES STRENGTH AND SECURITY

Addition to the plant of the Fairmount Glass Co., of Indianapolis. Steel fabricated and erected by Robert Berner Structural Steel Co., Indianapolis.

ONLY STEEL CAN ME

Here are two striking examples of steel's supremacy over all other structural materials. In both cases, it was demanded that the new structure be erected in, around and over an old building, without interfering with the plant's production schedule. With any material other than steel, it would have been necessary to shut down both plants. Yet, because the steel framework could be fabricated away from the job, then simply transported to the work and erected, it was possible to build

July 6-13 Controller.

NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Noble Township, Shelby County, Indiana, will receive bids at the office of the Township Trustee, Geneva, Indiana, until 1 o'clock p. m. of Thursday, July 18, 1929, for the erection and completion of the general construction of a one story Grade School Building to be erected on a site near Geneva, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building. In accordance with the revised plans and specifications prepared therefor by Norman H. Hill, Architect, and adopted by the Trustee and Advisory Board, said plans and specifications now being on file in the office of the Trustee, the Architect and the State Board of Accounts. The estimated cost of such work is $42,-000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the State Board of Accounts and sealed and in every respect must conform to the laws of the State of Indiana and to the rules and regulations of any governing State Board of the State of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble School Township, Shelby County, Indiana. and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a surety bond for the full amount of his bid, approved by the Trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the School Township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware St., Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank Building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

ALFRED C. HOWE,
Trustee.
GEORGE GREGORY,
CHRIS REIGER,
CLAUDUE SHAW,
Advisory Board.

End View of Type "J" Skylight, 8 ft. Wide on a Public Garage

American Ventilating Skylights meet every demand for perfectly controlled ventilation with a full measure of daylight. Because of this **double** value, the skylights are ideal for public garages, laundries, shops, foundries, gymnasiums, schools, public auditoriums, etc.

Made in two types—Type F, ridge ventilating, and Type J (illustrated above) full ventilating.

Standard construction: Sash made of 18-gauge galvanized copper-bearing rust resisting metal. Glazing bar is shaped to provide deep condensation gutter. American Ventilating Skylights can also be furnished in copper or other suitable metal. Trusses made of 2" x 1½" steel angles, riveted or welded, spaced not to exceed 6'0" apart. Gable ends made of 18-gauge copper bearing metal. Curb flashing extends 4" below top of curb. Operators are controlled by a pole with crank handle or by an endless chain as preferred. Motor operators can be funished when desired.

Prompt shipments from factory stock may be obtained on standard widths of 4, 6, 8, 10 and 12 feet and lengths in multiples of two feet. Special widths must be fabricated to order.

American Ventilating Skylights are sold either knocked down, freight allowed to destination (with or without ¼" ribbed wire glass) or erected and glazed complete, including flashing (but not counter-flashing).

INDIANA CONSTRUCTION RECORDER

FOR ARCHITECT ENGINEER

Devoted to the Interests of the Indiana Construction and Engineering Industry

FOR SUPPLYMAN CONTRACTOR

Vol. XI INDIANAPOLIS, INDIANA, JULY 13, 1929 No. 16

A BUILDING CODE IS A PROMOTER OF SOCIAL, ECONOMIC AND PUBLIC WELFARE

That and That Alone Is the Purpose of Such Legislation

The building code is quite generally looked upo nas a quasi-specification for building construction and too often it is one. This is not its purpose. The building code prescribes the minimum requirements of plan, construction, allowable working stresses and live loads as they are related to safe construction and sanitation.

Safe construction depends upon the correct use of suitable materials; the maximum safe working stresses for structural materials and foundations and minimum roof and floor loads for various occupancies; protection from fire and prevention of its spread beyond its origin; safe egress under fire and panic conditions.

Sanitation requirements are a minimum of daylight illumination, natural ventilation, cubic contents per occupant, drainage, sewerage, water supply and sanitary plumbing; maximum ground coverage and building heights; minimum court and yard areas and other provisions.

These building code provisions insure stable construction, personal safety and healthful living conditions and promote public welfare.

The building code should permit the use of all materials of prescribed qualities in their maximum capacities of strength, durability and fire-resistance in order to secure their greatest and most economical utilization. The code should definitely prescribe the maximum limitation for the use of all materials, and prevent misinterpretation, favoritism and other harmful conditions of administration. Valid engineering data which pertain to the quality, strength and durability of all materials are available and have been established by their performance in use, research and tests.

The building code is an important factor in the cost of building construction and it has a definite influence upon the volume of building construction which affects the prosperity and welfare of the community. The code can and does invite or repel capital investment in building construction. It is one of the most important items of community or State legislation in its effect on social and economic welfare.

The building code is a very technical document and is quite incomprehensible to the layman, and its economic influence is not always appreciated. Its preparation should be delegated to a competent committee which should be empowered to retain a consultant who is competent because of technical training, practical experience and, if possible, the administration and enforcement of such laws. All of these persons should be dissociated from commercial interests or influences.

Data relative to the code should be invited from every source and given careful and unbiased consideration and evaluated by acredited engineering, sanitation, economic and public welfare standards. Cognizance should be given to the commercial or financial interest which may have actuated its presentation. Criticism of the proposals submitted by one interest should be invited from competing interests and thus all available evidence developed and recorded for consideration. No one industry or interest should be permitted to control decisions pertaining to their own or competing industries or interests. The entire procedure should be conducted in an eminently impartial and judicial manner.

The preparation of a building code shoul denlist the active interest of all property owners, architects, engineers, contractors, manufacturers of and dealers in materials of construction and citizens generally. Every safeguard for the public interests should be employed in its preparation. The welfare of the community justifies all of the effort and expense that may be entailed in the enactment of a modern, adequate and impartial building code.

AN EFFECTIVE REMEDY

One That Should Be Applied in Indiana

Frequently there arise in the building construction field reminders to impress with the thought that contractors and others engaged in building should be united in trade and professional groups for their own and the industry's protection. There is every evidence pointing to the absolute importance of united effort on the part of the various elements in the building construction field to organize strongly ,and in so doing provide for some central point of contact with the other organizations in the field so that all may get together to thresh out mutual problems, promote the general welfare of the industry and stand solidly against evils from without that are constantly seeking to make inroads on the business.

Every legitimate contractor, sub-contractor, architect and so forth, should be affiliated with his own individual city and state associations, and these in turn should have direct contact with each other in order to cover the field thoroughly and have direct knowledge of what is going on. Further, there should be machinery in operation whereby all could act in unison when the occasion demanded.

Organizations are only as strong as the members make it and unless they have the full cooperation of the men engaged in their own particular line of endeavor any given goal, any set purpose, any real archievement is hard of accomplishment. And when reverses are suffered they effect not only members but even those on the outside, in fact, the whole building group.

The thorn in the side of the building construction industry, is the man therein engaged, be his calling what it may, who prides himself on going it alone, or free lancing. He don't want to be in any way restricted, as he terms it, he wishes to go "gunning" as he pleases, don't wish to be held to trade agreements or ethics. The

Went Up
—Remarkably
Fast!
The Capital Garage, Washington, D. C., is one of the largest in the country. It has 10 floors and a mezzanine. Floor area totals 260,000 square feet. 1200 cars can be accommodated.
Reinforced concrete construction was used. And so, the job was done in record time. Concrete was poured in 94 days. 7 floors went up at the rate of 1 per week.
And, what made this speed still more remarkable—each floor has 2 decks—really making 22 different decks to pour!
Freezing cold and wet weather added a handicap.
About 10,000 cubic yards of concrete and 1000 tons of reinforcing steel were used.
Remember: Reinforced concrete assures speed, permanence, beauty, strength, economy.

A NEW TURN WORTH FOLLOWING

Way Opens for Architects to Further the Interest of Their Profession

Arousing public interest in architecture and to an appreciation of the profession is a slow tedious process, but it can be done and is being done right along.

Certain professional standards and ideals of years gone by have proved costly to the members of the profession in this commercial day and age, and have placed a handicap on the architect of today. There is a dignity to the profession that must be maintained, that is as it should be for no man can be a thorough architect who has not had the proper schooling and training. However, in the olden days the architect was inclined to hide his light under a bushel, he was more or less aloof and had to be sought out when needed. As a result no one seemed to take it upon himself to do any missionary work for the profession and the result was that laymen generally, left alone, did not come to appreciate the value of the service rendered by an architect, lost sight of what painstaking design meant, and no educational means were followed to teach the people an appreciation of real architecture.

Those were the days when the profession slipped, resulting in conditions that grew steadily into a menace not only to the architect but to the public as well. During those "dark ages" commercialism crept in and the public unwittingly fell into its maw. It was a situation made to order for the new element that had stepped into the picture. Unappreciative of what was back of architecture and the traditions that went with it, the service involved, etc., the public came to look upon plans as plans regardless, and because the "architects' fee saving" agitator was after him constantly the layman swallowed the bait, hurriedly gave his work to the "plans furnished free" man and repented at liesure. There is no necessity to comment on the result of what followed, every city presents evidence of that result, poorly constructed structures of atrocious and garbled design for which the owner, with no one to supervise the work or look after his interests, paid dearly. But, he "saved the architect's fee" under the impression that an architect was a luxury.

The pendulum, however, seems to be swinging back. The public is evidencing more interest today in architecture and this is the architect's opportunity. Every member of the profession should leave no stone unturned to push across the profession's message to the public." There are agencies that are helping the cause, special courses for women, club women, in art and architectural history, the tendency toward tasteful ornamentation and beauty in building, etc. One reads now and then of talks on architecture before clubs, excerpts from which are good. Thus the interest in architecture is being aroused. It is a good work and should be encouraged. It is bound to result in better structures, will protect the public, will give the architect his rightful position and recognition in the community and none of it will lower, in any way, the dignity of the profession.

STATE ARCHITECTS HOLD THEIR SUMMER MEETING

Members of Indiana Society of Architects Gather at Michigan City

Business first, but don't overlook a good time!

That was the slogan sounded by Indiana Society of Architects' members who visited Michigan City, Friday, July 12, to attend the semi-annual summer meeting of the organization held in that city.

The attractiveness of the site selected, up along Lake Michigan holding out a prospect for a glorious day of recreation, carried an appeal which aroused quite a response for reservations, and the affair was expected to draw quite a crowd of the architectural profession.

An attractive program for the day was arranged by the Michigan City architects who acted as hosts to their fellow architects from other sections of the state.

The activities for the day began with a regular quarterly meeting of the directors of the Indiana Society of Architects at the Spaulding Hotel at 10 a. m., to which all visiting architects were invited. This session was followed by a noon luncheon and social period at the same hotel.

Later there was an auto sightseeing trip around the city which concluded with a drive out along the lake shore, terminating at the Long Beach Country Club. The remainder of the afternoon was given over to golf, swimming and other forms of diversion affording the visitors pleasant recreation.

The festivities for the day were brought to a conclusion with a delightful luncheon meeting at the attractive country club house that evening.

STEEL INSURES STRENGTH AND SECURITY

Steel framework for St. Patrick's Church, Indianapolis. Adolph Scherrer, Architect; Wm. P. Jungclaus & Co., General Contractors. Steel fabricated and erected by Insley Manufacturing Co., Indianapolis.

For Permanence Build with STEEL

The church is built to serve generation after generation. While buildings all around it change, a church remains. Therefore, to frame a church in structural steel is to guarantee its permanence. Structural steel will last indefinitely. The consensus of opinion among leading engineers is that no steel structure, which has had even the most casual attention in cleaning and painting, has ever been seriously affected by corrosion. The permanence of steel is an inherent characteristic, and is determined by the standards of its composition, manufacture and fabrication. Fixed scientifically, it is a factor not dependent on construction conditions or the human equation. If you want to build for years, possibly centuries, to come, see that your structure is framed with steel.

KOEHRING

No interfering bail— that's another thing you'll like when you need to lift out boulders, old timbers, stumps, etc. — that's another reason why the Koehring is the all-service shovel!

Raise or lower boom at command of levers! No need for adjusting crowding cables! Instant readiness for any situation—high bank work, close-in digging — stripping — shallow grading—high or low dumping! Fast on its feet and as easy steering as a motor truck! Know the Koehring!

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Shovel Capacities

Line of plate struck measure. Shock absorber on boom. Quickly convertible to pull shovel, crane or dragline.
No. 301 — ¾ yd. dipper on 16′ stick, standard. Other dippers on proportionate stick lengths. Wisconsin 4 cylinder gasoline engine, 5¼″x6½″, 1000 R. P. M.
No. 501 — 1¼ yd. dipper on 16′ stick, standard. Other dippers on proportionate stick lengths. Wisconsin 4 cylinder gasoline engine, 6″x7″, 1030 R. P. M.
No. 601 — 1½ yd. dipper on 16′ stick, standard. Other dippers on proportionate stick lengths. Wisconsin 6 cylinder gasoline engine, 6″x7″, 760 R. P. M.

Sealed Proposals

NEW ROOF
NOTICE TO CONTRACTORS

Bids will be received by the board of trustees of the Indiana State Teachers College, Terre Haute, Indiana, at twelve o'clock noon, Tuesday, July 23, at the Columbia Club, Indianapolis, Indiana, for a new roofing on the Library building.

Bids must be made on form No. 96 prescribed by the state board of accounts and must be accompanied by a certified check equal to 5 per cent of the amount of the bid.

Detailed plans and specifications will be on file in the office of the Registrar of the Indiana State Teachers College, Terre Haute, and in the office of the state board of accounts, statehouse, Indianapolis, Indiana. Additional plans and specifications, together with bidder's blanks for the individual use of the bidder may be secured from Johnson, Miller, Miller & Yeager, 819 Ohio street, Terre Haute, Indiana.

BOARD OF TRUSTEES OF THE INDIANA STATE TEACHERS COLLEGE,
By Helen C. Benbridge, Secretary.
June 29—July 6-13

COLLEGE BUILDING
NOTICE TO BIDDERS

Sealed proposals to the Board of Trustees of Purdue University for the completion of the present unit of the Purdue Memorial Union Building on the grounds of Purdue University, West Lafayette, Indiana, and the erection of a new wing in addition to the present unit, in accordance with plans and specifications prepared by the University architect, will be received at the office of the Controller, Purdue University, West Lafayette, Indiana, up to 10 o'clock a. m. Tuesday, July 16, 1929, at which time they will be publicly opened and read.

Plans and specifications covering general construction, electric wiring, plumbing, heating, etc., are on file in the office of the State Board of Accounts, State House, Indianapolis, Indiana, in the Builders Exchange at South Bend, Indiana, and in the office of Pond & Pond, Martin & Lloyd, Architects, 180 N. Michigan Ave., Chicago, Illinois, and from which office copies may be obtained.

Bidders may submit proposals on the general contract and/ or one or more major divisions thereof according to craft. Proposals will be submitted on form 96, accompanied by bidders questionnaire form 96-A, as prescribed by the State Boards of Accounts of Indiana, in accordance with the provisions of the Acts of the General Assembly, State of Indiana, 1929, Page 680, chapter 202. Each bidder will submit with his bid or bids a certified check to the amount of 5% of such bid or bids.

The Board of Trustees reserves the right to reject any or all bids.

R. B. STEWART,
July 6-13 Controller.

NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Noble Township, Shelby County, Indiana, will receive bids at the office of the Township Trustee, Geneva, Indiana, until 1 o'clock p. m. of Thursday, July 18, 1929, for the erection and completion of the general construction of a one story Grade School Building to be erected on a site near Geneva, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building. In accordance with the revised plans and specifications prepared therefor by Norman H. Hill, Architect, and adopted by the Trustee and Advisory Board, said plans and specifications now being on file in the office of the Trustee, the Architect and the State Board of Accounts. The estimated cost of such work is $42,-000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the State Board of Accounts and sealed and in every respect must conform to the laws of the State of Indiana and to the rules and regulations of any governing State Board of the State of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble School Township, Shelby County, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a surety bond for the full amount of his bid, approved by the Trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the School Township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware St., Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank Building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

ALFRED C. HOWE,
Trustee.

SCHOOL BUILDING
NOTICE TO CONTRACTORS

Notice is hereby given that the board of trustees of the school city of Batesville, Indiana, will receive sealed bids at the office of the president of said board of trustees at 102 West Pearl street in the city of Batesville, Indiana, until 1:30 o'clock p. m. of Saturday, July 20th, 1929, for the repair of the grade school building located at Sycamore, Catherine and South streets in Batesville, Indiana, and will at the same time and place receive bids for the heating, ventilating, plumbing and sewerage and electric wiring for said building, all in accordance with the plans and specifications prepared therefor by Raymond Fuston, architect, and adopted by said board of trustees of said school city, said plans and specifications now being on file in the office of the president of said board of trustees in the city of Batesville, Indiana, the state board of accounts and the state board of health, at the statehouse, in Indianapolis, Indiana. The estimated cost of such work is seven thousand ($7,000.00) dollars.

Separate bids will be received on different portions of the work as follows: General contract, heating, ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be on form No. 96 prescribed by the state board of accounts of Indiana. Each bid must be accompanied by a certified check for ten (10) per cent of the amount of the bid. Certified checks must be made payable to the school city of Batesville, Indiana. And check of successful bidder will be forfeited as liquidated damages in the case the bidder fails to enter into contract, and to furnish bond for the faithful performance of the same within ten (10) days after such contracts are awarded. Each proposal shall be in a separate sealed envelope with writing thereon plainly indicating the character of the work to which the bid relates, and in every respect must conform to the laws of the state of Indiana, and to the rules and regulations of any governing state board of the state of Indiana. The right is expressly reserved to reject any and all bids and to used sufficient time to investigate the bids and the qualifications of the bidder.

Copies of the plans and specifications may be obtained from the office of the president of said school city, at 102 West Pearl street, Batesville, Indiana, and bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day of receiving bids.

(Concluded from Page 3)

latter is a much misunderstood word and scares some men. In the last analysis, ethics means honor among men, as a prominent Indiana architect, now dead, expressed it several years ago. The same man said, "if less stress was put on ethics and more attention was given to an attempt to know and understand the other fellow, if the professional building men and the contractors would make it a point to get together, become acquainted and mingle, much of the petty stuff that holds us apart would disappear and much of our trouble would vanish into the air."

Organizations, composed of earnest, intent, men giving of their time and effort, sometimes at great personal sacrifice, struggle along doing things, not infrequently, big things, and the members profit through the conditions brought about, but, that is not all, the good that the organizations achieve reaches out to the whole industry. The organizations are not selfish. How about the "free lancers"? Do they hesitate to convert the good to their own use? Not much. Rather, they appropriate to their advantage the good that results and go merrily on their way, taking, taking, taking, but never giving anything in return. And there are times when their methods and their practices cause plenty of "grief" to the industry and call for more effort on the part of the organizations who are compelled to build up what the "go it aloners" have torn down.

All building contracting and professional bodies should make a more determined effort to increase their membership, convert more men to the organization idea. It will take much time, it will be hard work, but in the end it will result in strong, powerful bodies, who, working together, would give to the Indiana Building Industry a force prepared to carry on for good without fear of aspersion or acts and moves detrimental to the industry from those who seek to look at things in other ways than from the viewpoint of responsibility and "the greatest good for the greatest number."

"SCRAPS OF PAPER"

Certain Labor Unions at Chicago Toss Agreements to the Winds

Two Chicago Building Trades Unions, members of an international organization affiliated with the Building Trades Department of the American Federation of Labor have wilfully and deliberately violated and broken their trade arbitration agreements with their respective employers associations.

The Architectural Iron Workers, Local No. 63, went on strike. An injunction was secured by the employers and the men returned to work. They again violated their agreement by individually, separately or collectively striking on June 3d in sympathy with their sister organization. They again violated their agreement by failing to appear before the Joint Conference Board on June 4th in accordance with the terms of their agreement.

The Bridge and Structural Iron Workers, Local No. 1, without notice violated and broke their agreement with their employers by going out on strike June 1st. They again violated their agreement by refusing to order their members to resume work after the umpire on June 4th declared that they had violated their agreement both in letter and spirit and ordered them to put their men back to work.

These two unions representing a great international organization which has always publicly stated that their constituent members must respect and live up to their obligations with their employers, without any notice to the employers, ignored their agreements in every respect, casting them aside as mere scraps of paper, created a breach by their wilful and unfair action, which will take a long time to heal.

The agreement of Local No. 1 was in full force and effect, was made in good faith by the employers and did not expire until 1932. The agreement with Local No. 63 did not expire until 1933. Collective bargaining has always had the approval of Chicago employers. Agreements have been made with all of the unions for a number of years and with but few exceptions they have been considered as sacred obligations of both parties to them.

The actions of these two unions has caused not only contractors, but the general building public to question whether it is good practice to make agreements with labor unions. If the confidence of those interested is to be restored, not only the international organization, but the Chicago Building Trades will have to take immediate action to convince the contractor and the building public that they are or are not able to control their affiliating trade units or compel the keeping of trade agreements inviolate.—(Monthly Bulletin, Buffalo, N. Y. Builders' Exchange.)

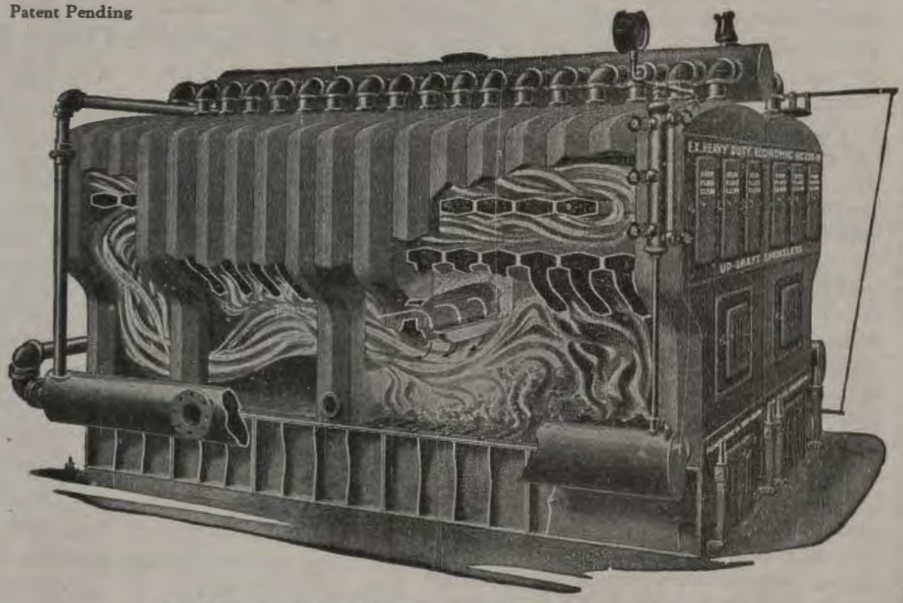
JUNE BUILDING IN INDIANA APPROACHES FIVE MILLION DOLLARS LEVEL

State Activity, However, Still Lags Behind That Recorded a Year Ago

In line with the general trend that has prevailed in the building construction field in Indiana since the first of the current year, new work launched in June continued to be in less volume than that of the corresponding month a year ago.

Figures submitted by the building inspection officials of eleven Indiana cities, where records are kept of new building construction activities, show that the estimated valuation on new work for which permits were issued in June totaled $4,884,721 as against $5,609,159 for June, 1928, a decrease of $724,438 or 12.9%. These eleven cities issued 278 less permits the past month than were issued during the corresponding period a year ago.

However, the June building performance, taken as a whole, was not so bad in that it showed a steady tone for the state, holding close to par on the figures recorded in May of this year.



Comparative individual records of the various cities for June, 1929, and June, 1928, show that of the eleven localities, six registered varying degrees of gain while the other five had to stand a wide range of losses. Those on the gain side were: Terre Haute, 207.4%; Kokomo, 87.5%; Evansville, 81.1%; South Bend, 72.5%; Fort Wayne, 62.8%; Richmond, 26.6%. The losses sustained were by these cities: Mishawaka, 71.2%; Michigan City, 70%; Hammond, 49.7%; Gary, 46%; Indianapolis, 14.4%.

The official figures sent in by the building commissioners and inspectors are:

	June, 1929		June, 1928	
City	Per.	Est. Val.	Per.	Est. Val.
Evansville	435	$ 730,066	630	$ 403,073
Fort Wayne	199	543,448	152	333,749
Gary	138	203,695	183	1,007,345
Hammond	78	263,200	94	523,200
Indianapolis	837	1,986,432	983	2,321,913
Kokomo	88	100,215	48	53,432
Michigan City	26	18,990	42	63,755
Mishawaka	***	115,043	***	339,820
Richmond	45	95,773	59	75,609
South Bend	457	621,515	390	360,130
Terre Haute	***	206,344	***	67,133
Totals	2,303	$4,884,721	2,581	$5,609,159

INDIANAPOLIS

The Old Trails Building—Pierre and Wright, Architects, and A. V. Stackhouse Construction Co., Contractor—marks the growth of Indianapolis to the west and indicates the trend forward toward fire-resistive construction, eliminating combustible trim.

For this building we furnished the reinforcing steel, and accessories; Baker Removable Wood Joist-Forms; Kalamein and tin clad fire doors; Hollow-metal passenger elevator doors; Sanymetal Toilet partitions; Bayley-doors; Sanymetal Toilet partitions; Bayley-Springfield Steel windows; 3-Way flush watertight sidewalk doors; and metal lath and accessories.

The economy and popularity of Baker Removable Wood Joist-Forms is best illustrated by the "repeat" user. Many contractors have used this system for ten or more different structures; three contractors have used it for more than twenty-five separate operations. The A. V. Stackhouse Co., Contractors, for the building illustrated, have built twenty-seven different structures with the aid of

IMPORTANT DOCUMENT FOR THE BUILDING CONSTRUCTION INDUSTRY ABOUT TO BE PROMULGATED

Committee on Standards, New York Building Congress, After Several Years Work Offers Specifications Along Standardized Lines

Standard specifications for the general construction trades, that for which there has been serious agitation for some time, are at the point of realization.

The New York Building Congress through its Committee on Standards has completed a standard set of specifications for the building industry and will soon make them available to architects, builders, owners, manufacturers of building supplies and others. The standard specifications have been approved by the trades for which they were prepared and are now being printed for distribution.

The large number of inquiries from building centers throughout the country concerning the standard specifications shows that they are eagerly awaited by the industry and that they will at once become the standard practice in the trades to which they apply.

Students of production costs have for many years recognized that appreciable economies would ensue if manufacturers could be persuaded to confine their products within the limits of acceptable standards. The United States Department of Commerce through the Bureau of Standards and special committees studying elimination of waste by means of simplified practice have done a great deal toward establishing such standards for many products entering into building construction.

Another Move Toward Standardization To Effect Economy

The New York Building Congress conceived the idea that if in a like manner acceptable standards could be established for materials and workmanship entering into general building construction similar economies would result and much of the uncertainty in estimating be eliminated. It was generally agreed that such standards could best be established through specifications.

A Standards Committee was accordingly set up under the chairmanship of Mr. Joshua Barney of Barney-Ahlers Construction Corporation, to study the possibilities of developing specifications to describe acceptable standards covering materials and workmanship in each trade division. It at once became evident the specifications as heretofore written did not lend themselves to standardization due to the practice of combining the "Scope of the Work" for each building, with the descriptive clauses covering qualities of materials and workmanship, qualities which are more or less common to all buildings. The obvious solution therefore was to separate "Scope of Work" from the purely descriptive, and then develop clauses specifying acceptable and established methods for execution of work and setting up quality standards for materials.

Building Trade and Professional Groups Invited To Co-operate

Such methods and standards to be of value must be acceptable to the architect, contractor, sub-contractor, manufacturer, and labor. Representatives from these groups were invited to assist in the work and from them sub-committees were selected, each under the chairmanship of an architect.

A great deal of consideration was given to the form of the specification, it being finally decided to re-recommend dividing specifications into parts "A" and "B"; part "B" to consist of the New York Building Congress Standard Clauses establishing standards for all materials and workmanship which could enter into the work of any trade division on any type of building; part "A" a specification written by each architect for each job consisting of items of work in each trade division for the particular building with references by number to the paragraphs or clauses in part "B" which defined the quality of both materials and workmanship.

Deemed Best To Centralize Task of Editing

The preparation of specifications for the various trade divisions was at first assigned to sub-committees but after two years of effort it was decided, owing to the difficulty of co-ordinating the work of the sub-committees, that better progress could be made and more uniformity obtained if the actual editing of the specifications was centralized.

Mr. W. A. Payne, vice president of C. T. Wills, Inc., general contractors, was then appointed chairman of the Standards Committee and Mr. H. R. Dowswell of the office of Shreve and Lamb, architects, selected as editor.

Under their direction specifications for trade divisions as they were written, were sent to trade organizations, contractors, sub-contractors and manufacturers for their consideration and criticism. All suggestions received were carefully considered, conferences were arranged at which all points raised were fully discussed, after which the specifications were re-written and again submitted. This process continued until it was agreed that acceptable standards had been established and clearly described. Wherever trade associations existed, such as the Employing Plasterers' Association, Marble Employers' Association, Allied Metal Industries, Standard Steel Board of Trade, National Terra Cotta Society and Master League of Cement Workers, the several specifications were submitted to such associations and after final editing received their approval.

Where a trade association did not exist the specifications were submitted to two or more men recognized as authorities in that trade group, and through conferences revised until agreement was reached.

Put To Practical Tests

As these standards were developed, Shreve and Lamb put them into actual practice in order to test their workability and practical value and for the last three years have written two-part specifications

for their work both within and beyond the metropolitan district. A very complete test of this system was made early in 1928 on a large building in one of the Southern states, now nearing completion. On this building a complete specification in two parts was issued for all of the trades except mechanicals. In order to carry out certain pre-determined policies the bidding, especially for sub-trades and materials, extended from New York to Florida. After the reception of the bids, which were remarkably close, letters were written to all of the general contractors from whom bids had been received, explaining that the specifications were based on the New York Building Congress Standards and asking for comments from their own organizations as well as from subcontractors bidding through them. Their replies were, in practically every case, an unqualified endorsement.

One large contracting firm stated that it was very much in favor of a two-part specification especially if the part containing the clauses describing materials and workmanship were printed as a standard document. Their Estimating Department labeled Part I, "Where," and Part II, "How."

Value of Documents Weighed by Acceptability To Architects

In establishing standards acceptable to the trade, Mr. Dowswell, as an architect, has constantly kept in mind that the specifications if they are to be of value, must also be acceptable to the architect. The specifications have accordingly been written so as to leave the architect absolute freedom in the choice of materials while at the same time standards of quality have been set up which are understood by the trade can therefore be estimated, and so eliminate from estimated allowances for uncertainties and ambiguous requirements.

To further assure the architectural profession that their interests had been fully guarded the New York Chapter of the American Institute of Architects was invited to appoint a committee from its members to consider and report on the work Congress had done.

Specifications To Be Printed Serially in the American Architect

In addition to printing the specifications for general distribution arrangements have been made with the American Architect to publish the specifications serially. Along with their publication they propose to publish a series of articles by Mr. Dowswell explaining how they may be used in actual practice. Mr. Dowswell will also be available, through the American Architect, to answer questions regarding the use of the Congress Specifications and to explain how they may be used either in whole or in part for any type of building.

It is believed that these specifications will, as they become known assist greatly in reducing disputes, will aid in establishing a higher and more uniform standard of construction and will be found as useful as the standard documents of the American Institute of Architects.

General Construction Trade Specifications Completed

The work is not complete, but all of the general construction trade divisions have been approved and are ready for printing, and soon can be obtained upon application to the New York Building Congress, 101 Park Avenue, New York. There will be a nominal charge sufficient to cover cost of printing and handling.

The specifications about to be issued cover the following:

Demolition.
Excavating.
Piling.
Structural Steel.
Waterproofing by Bituminous Membrane.
Waterproofing by Plastic Coat.
Masonry and Concrete Materials.
Masonry.
Mass and Reinforced Concrete (including Waterproofing by Integral Method).
Concrete Arches and Fireproofing.
Furnishing Granite and Cut Stone.

Carpentry.
Window and Door Screens.
Weatherstrips.
Metal Windows.
Hollow Metal Work.
Metal Covered Wood.
Revolving Doors.
Glazing.
Painting.
Mail Chutes.
Elevators and Elevator Accessories.

Similar standards are now being developed for the Mechanical Division and for divisions dealing with special equipment. As soon as these have been completed notice will be given through Architectural and Engineering publications.

TO DEMONSTRATE A SPEED SCHEME IN BUILDING CONSTRUCTION

Steel Framing for Home Building To Be Used

Moving into a house just 100 days after starting to dig the foundations is a record which is planned for demonstration this month, according to the American Institute of Steel Construction. Such rapid construction is made possible by the use of steel framing. The house, of eight rooms and two baths, and attached garage, will be erected in Indianapolis. It will measure approximately 40,000 cubic feet. The contractor, in this instance, will be something in the nature of an assembler, for the materials will be fabricated in plants at a distance while the foundation is being built, and shipped to the site ready for erection. By carefully scheduling the arrival of the materials and parts it is expected to have the house ready for occupancy within one hundred days.

This Indianapolis house is being erected as a demonstration of the durability and economy through speed of erection that is possible with steel framing. The organization doing the work has built or is building similar demonstration houses of steel framing in Philadelphia, Lancaster, Syracuse, Rochester, Toledo and Columbus.

The plans for this house were made by Frederick Wallick, architect, of Indianapolis, who is also supervising the construction.

VACATION TRIP COMES AS REWARD OF A GOOD GUESS

Mrs. Clara Oxley, Statistician of Indianapolis Building Inspection Department, Is Lucky

A burning candle, a moment's hesitation, a chance guess, has all worked out to result in a nice vacation trip next month for Mrs. Clara Oxley, statistician of the Indianapolis Building Inspection Department.

It so happened she entered the depot of the Colonial Stages on Monument Circle where a candle burning guessing contest was on. She was urged to register a guess on how long the candle would burn. She guess 120 hours even. It burned 120 hours and 26 minutes. That gave her third prize, a round trip to Cleveland and a week's stay at the Hollanden Hotel.

MICHIGAN CITY

A Story With a Moral

This is the chronology of the meeting of the I. S. A. at Michigan City, and we've tagged a moral at the tail and so as to induce you to read through. We all do enjoy morals so much.

These attendants whose chronometers were operating under the blessings of D. S. T. arrived at 10 a. m. Friday. Those whose operating time had been the subject of some dirty political footballery arrived one hour later. It made little difference, however, because the morning was devoted to business, and we just weren't there for business, but rather to enjoy ourselves.

Reception Committee Extends Cordial Welcome

Strangers were received by Mr. Fred Ahlgrim, architect, of Michigan City, and Mr. Nate Rosenberg, secretary of the Chamber of Commerce of Michigan City, and from the moment of arrival through the entire day the time was planned and engineered by these men and those whom they had called on to help.

The business cited above being as expeditiously disposed of as the well known loquacity of a group of architects would permit we had luncheon at the Spaulding Hotel, and then surrendered ourselves to a delightful program of entertainment for the afternoon.

Inspection Tours Included in the Day's Program

We visited the Weil-McLain Boiler Works where was demonstrated with vivid clarity the theory made a topic of conversation by Einstein—we refer of course to the matter of relativity. The day was hot, but the boiler works was much hotter, and if you wish to feel delightfully cool and comfortable on a hot day, spend a half hour in a boiler plant. We saw them making cores and moulds—we saw them charging the furnace where we were advised that the temperature was 2700 degrees, and saw them pour—we saw the casting in the rattler and saw it being machined—and then saw the finished sections all piled high ready for next winter's coal. Mr. Howard, who conducted us through, was most courteous and careful in explaining everything—even to the women in the party.

We also visited the Josam plant where we were shown the line of equipment manufactured by these plumbing specialty folks. Some of us—not all of us—also saw a very fine little home incinerator which is just being put on the market by the Josam Company.

(It should be interjected at this point that while most of us were enjoying these nice cool, refreshing trips, that Merritt Harrison was out on the hot burning golf course playing a hot game. But then Merritt knows all about incinerators.)

State Prison Visited

From the Josam plant we went to the State Prison. A moral could be inserted at this particular point. Suffice it to say that after seeing the home which is provided for the guests of the State; the occupations furnished for them so that no hands or minds are idle; and the cleanliness, amusements and good healthfulness offered for the men, we were nevertheless impressed with the tiny horizon which the walls of the prison gave to its inmates. Now that's almost a moral. At any rate we were impressed with the "damfoolishness of criminalizing." Incidentally we did not see a single architect among the inmates.

Marvel at Nature's Gift

And then a delightful ride in and out among the dunes, all populated with the carefree abandon which seem to go naturally with homes in an undisturbed nature preserve. For the place has been left very much as it was made, the roads going up and down and in and out where they can, and the homes being tucked in with as little disturbance to the natural landscaping as possible. Of course, the largest thrill of the trip was along the lake shore—the greatest beach in the world—and that, ladies and gentlemen, is not dealing in exaggerations—it's a fact. We may not have all been in agreement as to whether or not the development had been properly handled—one couldn't really expect that of architects—but I believe all were impressed with the tremendous opportunity which a generous nature had presented to its children in this delightful spot.

A Glorious Rendezvous

And then the evening meeting in the Club House, high on a hill and looking across dunes and woods to the old lake just barely rippling in the moonlight—or was there a moon Friday? At any rate it was lovely.

The speaker of the evening was Dr. Allen Albert, secretary to the Architectural Commission for the Chicago World's Fair of 1933. In our short history in the affairs of the society we have yet to hear a more thrilling story, better told than the story of the architecture of this World's Fair as told by Dr. Albert. It would take a very mild mannered man (and of course no architect is that) not to feel tremors of ambition race through his system as he listened to Dr. Albert's story.

A Tremendous Opportunity Held Forth To Architecture

We concluded that never had there been offered to architecture an opportunity that approaches this one of the

fair. It is to be sheer Beauty. The one theme of Beauty is held up to its architects and they are to play up to that theme in its highest and noblest expressions. The history of this beauty as expressed in the fairs of the world was traced. The white splendor of the first Chicago World's Fair, the institution of color at San Francisco, and magnificent design and gobs of color at San Diego. And gradually we were impressed with the fact that this 1933 Fair would be expressed in the very fartherest reaches of which the human imagination is possible, not only in shape and color, but also in sound, all harmonized to the same tremendous pitch of beauty. (That was certainly a thunderous sentence, but none too much so.) I tell you we just tingled all over with the possibilities offered.

Ponder and Muse On This

Imagine please, sitting in a gayly decorated barge on a placid lagoon while a combination of the world's greatest orchestra plays the Moonlight Sonata and an accompanist sits at the keyboard of an organ, and plays the entire theme through for you in a myriad of colors.

Or picture again, a receding tower or campanile all glass with a film of water streaming down its sides and a multitude of colored lights playing on it from the inside. And when asked how high this tower should be, the nonchalant dreamer who dreamed it, said, "Oh, one or two thousand feet." It just illustrates how these fool architects are thinking.

Well, these and many more dreams Dr. Albert told us relative to this 1700 acre island, spotted, lagooned, and beautifully landscaped exposition. And then he sprung on us the prize package of the whole series of excitements. This fair is to be in the truest sense a World's Fair, for the entire world will sit and see in its natural colorings and hear in its true tones the presentation of the pageantry as shown at the fair, all through the aid of the radio and the television, for the use of which special preparations are being made! Wow! Doesn't that just bowl you over?

And In the End

And now for the moral of our story. First, Michigan City certainly set up a pattern of the proper way to entertain. We thank you, Michigan City. And second, we were impressed with the fact that the clam architect who shuts himself up in his own little shell, and insists on being non-fraternal, and whose prime joy, and delight is to turn up the nose in criticism of the efforts of an organized profession, certainly misses a great amount of broadening which might be acquired through shaking hands with the real he men in his profession, and through experiencing just such meetings as the one held at Michigan City—Amen.

PALLADIO.

* * *

P. S.—Send in your applications for membership to the office of the secretary.

IT WOULD KEEP BUILDING GOING AT A STEADY PACE

Labor Flare Ups Causing Uncertainty Drive Capital to Other Investment Fields

Organized labor should get wise and not let their leaders run wild to the detriment of those who are in the unions and who are sincere in their desire to keep peace and harmony on building construction work. It is the union's job to see that the necessary men are available to meet the demand and that the wages set and agreed upon in their trade agreements should prevail at all times. Workmen should not be allowed to go on strike and all disputes of any kind should be taken before a properly organized tribunal for immediate settlement and adjustment without any delays on the work.

STEEL INSURES STRENGTH AND SECURITY

This gigantic forest of structural steel is the machine shop of the Studebaker Corporation, South Be... Steel fabricated and erected by Indiana Bridge Co., Muncie, Ind.

You know

There never is any question about the quality of structural steel. Steel is *proved right* in the making. It is worked and reworked—rolled again and again—and every manufacturing operation is controlled by tests and analyses.

Long before a steel member appears on the building site it has been proved, through and through, time and time again. Architects and engineers working with steel know steel's every property *before* it goes into construction. No other

...ural steel is employed in the drive-away garage of the Studebaker Corporation. This steel was fabricated and erected by the Indiana Bridge Co., Muncie, Ind.

...EL is *right*

building material provides such accurate knowledge of its characteristics—consequently none can be used with the same confidence.

This modern age is an age of steel—for every kind of building or bridge in every size. Modern efficiency calls for the saving of building time and material, more floor space, less weight, less bulk–quicker returns. Only steel is good enough to provide all these.

Sealed Proposals

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned the Baugo Township School Building Company of Baugo Township, Elkhart County, Indiana, that it will on Thursday, July 25th, 1929, at 10 o'clock a. m. at the school house in Jamestown, Baugo Township, Elkhart County, Indiana, receive sealed bids for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel and Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Building, Indianapolis, Indiana. Plans and specifications have been adopted and approved by the Building Company, and various Boards of the State of Indiana excepting the State Board of Accounts.

Plans and specifications are now on file in the office of Edwin C. Diefenbaugh, President of the Building Company, the office of the State Board of Accounts and in the office of the Architects.

All bids must be in writing on form No. 96. Building Company reserves the right to reject any and all bids and have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Edwin C. Diefenbaugh, President Baugo Township School Building Company, to be held by the Company as a guarantee of good faith and that the successful bidder will execute a contract and furnish a surety bond for the full amount of the bid. Checks of bidders not awarded contract will be returned within ten days.

Should a successful bidedr fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check to the Building Company as liquidated damages.

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

The success or failure of a heating installation depends upon getting the right boiler. Next to efficiency, the matter of economy is an important point. PROX BOILERS are built for economical service and lasting satisfaction. They are so constructed that the maximum number of heat units are generated from every shovelful of coal consumed.

PROX HOT BLAST SMOKELESS BOILERS
Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood

The Indiana Theatre Building houses not only one of the most beautiful theatres in the country, but other recreational features including the Indiana Ballroom, bowling alleys, etc. Rubush and Hunter were the architects and William P. Jungclaus Company the contractors for this building.

We furnished the reinforcing steel and accessories, Baker Removable Wood Joist-Forms; Kalamein doors and windows; hollow metal passenger elevator doors and Vamanco counter-balanced freight elevator doors.

The Indiana Theatre furnishes an interesting example of adaptability of Baker Removable Wood Joist-Forms. The forming of the theatre floor involves a "dished" floor; the balcony framing is intricate; the dance hall floor provides for unusual rythmatic stresses, while the roof construction provides for the usual light loads. The smooth surfaces and clean lines produced through the aid of Baker Removable Wood Joist-Forms permitted the use of decoration applied directly to concrete joist construction in some portions of the building, notably under the balcony in the Ballroom, and the ceiling of the directors' room and the ladies' lounge.

Vol. XI INDIANAPOLIS, INDIANA, JULY 27, 1929 No. 18

BUILDING INDUSTRY MAY YET BE RID OF MANY PREVALENT UNFAIR PRACTICES

Trade Associations in Building Field in Co-operation With Federal Trade Commission Seeking to Improve Questional Methods That Have Injured the Industry

What may eventually evolve into a program for improved trade policies, with the ultimate elimination of such unethical practices as shopping for bids, is foreseen in the program launched by nine trade associations of manufacturers and distributors of building materials and equipment in establishing standard codes of practice with the cooperation of the Federal Trade Commission. It is a new experiment in the administration of improved trade practices. Utilization of police powers of the federal commission in the enforcement of approved practices agreed upon by the industrial groups is a feature of the new experiment. The Constructor, in discussing this new policy, says:

New Department in Building Industry

"While a development of the last twelve months, so far as it affects the construction industry, this program has been under way since 1919 in other branches of business. It is still under process of development even as regards basic principles, for it has not been determined definitely how far the Federal Trade Commission can go in preventing those practices which, while violations of agreed upon rules and detrimental to business, are not direct violations of existing law. This new activity, it appears, will delimit and legalize itself as various questions arise and are settled in the courts. The procedure involved is simple. Representatives of a branch in setting up standards of an industry or trade gather together and formulate a body of rules covering approved and disapproved business practices, both as they relate to unfair competitive methods within the trade and as they relate to ethical relationship with other trade groups of both buyers and sellers.

"Once these fair practice rules have been agreed upon, they are presented to the Federal Trade Commission for review, approval, rejection or revision as the case may be. It has been the policy of the Federal Trade Commission in a number of recent instances to separate these rules in two classes; rules in one class being enforcible by the commission upon its own initiative as constituting unfair competition when violated. In the second class has been grouped those rules which, while recognized as beneficial, business-like and ethical, yet do not pertain to activities definitely established to be illegal in the same sense.

"It is with regard to enforcement of this latter group of rules in formulated codes that the Federal Trade Commission seems to be feeling its way. So far, it has appeared to be the policy to use the good offices of the commission to discourage such borderline violations of good practices rather than to attempt any drastic enforcement program. Contractors in evaluating this new trend in the activities of the Federal Trade Commission will at once see the probabilities of a new factor being injected into the settlement of those problems of relationships between groups in the construction industry.

Nine Groups Have Rules

"Among the nine groups that are setting up trade practice rules with the cooperation of the commission are several, such as the paint and varnish, face brick, gypsum, stone and reinforcing steel industries, which come in very close touch with the operations of contractors. Some do subcontract work on building and other projects. Hence, the rules set up for the guidance of these groups in following fair practices will have a direct bearing on relations with general contractors. Such matters as bid peddling are, of course, to the fore in any discussion of ethical business relationships, and sooner or later the Federal Trade Commission will be forced to take some position on the matter. As an instance of the demand for a ruling on the shopping of bids, the National Association of Builders' Exchanges in a recent case laid a complaint before the commission, charging a general contractor with this practice.

"The general contractor, it was specifically claimed, shopped subcontract bids after being awarded a federal contract. The charging of one firm with a practice which is as widespread as the peddling of bids, is of little importance except when seen in connection with this much broader movement which is tending toward utilization of the police power of the Federal Trade Commission in the enforcement of trade practice rulings. Under the circumstances, however, a ruling against bid peddling may well start a train of events in motion that will permanently outlaw this practice."

MEMBERS OF INDIANAPOLIS BUILDING CONGRESS CELEBRATE

Initiation of New Members Cause for Enthusiastic Meeting

The success that crowned the efforts attendant upon the recent intensive new membership campaign instituted by the Indianapolis Building Congress was celebrated in great style by that body Thursday noon, July 25, with a luncheon and jollification meeting at the Hotel Lincoln.

Team captains and members, together with the sixty-seven new members, were grouped together while others of the Congress in goodly numbers gave "the workers" and the initiates a big hand. Much enthusiasm attended the introduction ceremonies.

Tone was added to the meeting by the presence of Mayor L. Ert Slack, Indianapolis, who spoke, taking for his sub-

ESTABLISHED 1897

Fireproof—
costs very few dollars more

An addition to the Plains Hotel, Cheyenne, Wyoming, was originally planned as steel frame with wood floor joists and wood stud partitions.

However, when a *fireproof* structure of reinforced concrete was found to cost *very little more*, it was naturally the choice.

Now, acting as a firestop between two wood buildings, the Plains Hotel addition boasts a reinforced concrete frame with clay tile partitions, steel doors, windows in the court.

It measures 55 by 65 feet, has 5 stories with basement. Concrete was started March 15, 1928, and finished less than three months later.

Build Fireproof from ground to roof.

ARCHITECT'S NAME ON BUILDING GIVES DIGNITY TO PROFESSION

Credit Is Due the Man Who Creates a Good Structure

Buildings, like books, should be signed by their authors in the interest of public appreciation of architecture, says William Orr Ludlow, vice president of the New York Building Congress. It is no more unprofessional, he continues, for an architect to sign his building than it is for the sculptor to place his name on the fold of the garment of his statue, or for the artist to place his signature on the corner of his canvas.

Mr. Ludlow says this is the duty of the architect to the public and to himself. Architects consent to it, yet it is not generally done. By signing the building, the public is interested in architecture by attaching to worthy buildings some personality. The public will be taught that a really good building is a work of art, not merely a structure, and that its author is an artist as well as master builder, and therefore signs his work like other artists. Public recognition is brought to the architect in proportion to the merits of his building.

"We not only let the public know that the architecture is not merely a perfunctory performance," declared Mr. Ludlow, "but that the authors of good buildings have given of their individuality to their work and have produced something to be proud of; we give the architect a dignity in his own eyes that will make him ashamed of mediocre effort.

"In an age when mechanical process and organization is submerging the individual and stifling individual expression, we preserve to the members of this profession a recognition of individuality that will be an inspiration to better art, better building, and a more unselfish service to their fellow men through the great profession of architecture."

In Europe architects are accorded recognition in connection with their work. In Athens, even today, the names of their great architects are venerated along with their great sculptors, statesmen, and philosophers.

INDIANA ARCHITECT DIES

Hiram Elder, Long in the Practice at Marion, Summoned

Another one of the Indiana architects of the old school is gone.

Hiram Elder, 68, for many years engaging in the practice at Marion, Ind., passed away at his home Thursday, July 18.

He was an architect of the old master builder type laying out in his own office plans in their entirety and prided himself in his ability to lay out his own engineering, structural, heating and ventilating and electrical. During the course of his practice he built many of Marion's prominent structures from homes to commercial and factory buildings. He also made plans for structures in surrounding cities and any number of school houses in various localities in Indiana and Ohio.

AROUND THE STATE AMONG THE ARCHITECTS

A Little Chatter

George J. Stoner, architect, Terre Haute, has moved his offices from the Chanticleer Building, over to the new Chamber of Commerce building, on Cherry street, near Sixth street, where he has one of the most attractive architectural quarters in the state.

* * *

Architect William Gregory Rammel, Logansport, has moved from Room 510 to Room 203 Barnes building, where he has enlarged office accommodations.

* * *

E. R. Austin, prominent South Bend architect, has been on the sick list for the past week or so.

* * *

Architect Wilson B. Parker, Indianapolis, just back from Toledo, O., is sounding the praises of that city. He says it is the busiest building community he has seen in a long time, structural activity being evidenced throughout the city, big office buildings, store buildings, factories, fine residences and gigantic dock improvements.

* * *

No, we do not know what the fare to the northern Ohio city is at this writing.

* * *

That was a great meeting and outing held at Michigan City by the Indiana Society of Architects. It is too bad all those of the architectural profession in Hoosierdom couldn't have been on hand for the occasion.

* * *

Architect Fritz Anderson, Evansville, licensed engineer, and a member of the State Engineers Registration Board, was in Indianapolis last week-end attending a regular quarterly meeting of the board.

STEEL INSURES STRENGTH AND SECURITY

Indiana University's great Fieldhouse is framed with structural steel. Robert Frost Daggett, Indianapolis, Architect. Charles A. Pike, Bloomington, Contractor. Steel fabricated and erected by Bedford Foundry & Machine Co., Bedford, Ind.

STEEL for "the Great Open Spaces"

STRUCTURAL steel is responsible for a better architecture. It has made possible the spanning of great areas without the use of columns or posts. In theatres, colosseums, armories and indoor stadia it has effected an entirely new architectural treatment. It has civilized the masses by bringing mankind together for the closer enjoyment of popular sports and pastimes.

No other building material is as strong as steel, and it is the only one equally useful in resisting tensile, compressive and shearing stresses. Less bulk of structural steel is required for safe construction than any other building material. This compactness means that columns and beams occupy less space, resulting in greater net floor areas, better lighting and ventilating facilities. Under any conditions, you can build better with steel.

Owner, Board of Education, Slater Bartlow, Jr., Supt. of Schools, Huntingburg. General contract awarded to E. G. Hemmerlin, Jasper; heating and plumbing awarded to Huntingburg Machine Works, Huntingburg; electrical wiring awarded to R. B. Collins, Huntingburg.

Sealed Proposals

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of German school township, Bartholomew county, Indiana, will receive bids at the office of the township trustee, Taylorsville, Indiana, until 10 o'clock a. m. of Friday, August 16, 1929, for the installation and completion of heating and ventilating, plumbing and sewerage in and for the one-story Grade School Building now being erected in Taylorsville, Indiana, in accordance with the plans and specifications prepared therefor by Norman H. Hill, architect, and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect and the state board of accounts. The estimated cost of such work is approximately $17,000.00.

Separate bids will be received on heating and ventilating and on plumbing and sewerage. Combination bids will be considered.

All bids must be in writing on forms prescribed by the state board of accounts and sealed and in every respect must conform to the laws of the state of Indiana and to the rules and regulations of any governing state board of the state of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to German school township, Bartholomew county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a surety bond for the full amount of his bid, approved by the trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

SCHOOL HOUSE

NOTICE TO HEATING CONTRACTORS

Sealed proposals will be received, as required by law, by the Township Trustee and Advisory Board of Clinton Township, Boone County, Indiana, in the office of the Township Trustee at the school building, located in the township, at 2 p. m., Wednesday, July 31, 1929, for the erection and completion of a heating and ventilating system to be installed in and for the Clinton Township Grade School Building, in accordance with the plans and specifications as prepared and furnished by John E. Frost, architect, Lebanon, Ind.

All bids are to be accompanied by a certified check in the amount of five (5%) per cent of the bid submitted, made payable to J. S. Anderson, township trustee.

Plans and specifications are on file in the office of the architect above mentioned and copy thereof may be secured upon application. A deposit of $25.00 must be made upon receipt of plans and specifications which will be returned upon the return of such plans and specifications, and the submitting of a bona fide bid. The right to reject any and all bids is expressly reserved by the township trustee and advisory board.

(Signed) J. S. ANDERSON,
Trustee, Clinton Township, Boone County, Indiana.
July 27

SCHOOL HOUSE

NOTICE TO CONTRACTORS

The undersigned, Charles Rowe, Trustee of Johnson School Township, of LaGrange and Noble Counties, Indiana, hereby gives notice that he will receive sealed bids for the construction of a new school house building at the town of Wolcottville, in said counties, said building to be erected in said town of Wolcottville, in the county of LaGrange, Indiana. Said bids will be received at the office of said trustee in said town of Wolcottville, Indiana, up to and until the hour of 2 p. m. on Saturday, August 17, 1929, at which time and place all bids received will be opened and read in the presence of the Advisory Board of said Johnson School Township of LaGrange and Noble Counties.

Plans and specifications of said work are on file in the office of said trustee and copy of the same may be seen and examined and consulted at the office of Bradley & Babcock, architects, at Fort Wayne, Indiana, where blank forms of proposals and bids may also be had.

Each and every bidder shall, with his sealed bid, and in the same envelope, deposit a certified check for at least three (3) per cent of his bid payable to the order of the undersigned, Charles Rowe, trustee of Johnson School Township of LaGrange and Noble Counties, Indiana, to be retained by him as evidence of good faith and until a successful bidder has, or successful bidders have furnished bond or bonds to the approval of said trustee and said Advisory Board. And each of said bidders is also required to file with his bid or proposal all of the statements and forms required by and in all ways comply with Chapter 202 of the Acts of the General Assembly of the State of Indiana, of 1929.

The successful bidder or bidders will be required to sign each a written contract with said trustee and enter into a bond for the amount of his bid secured by an approved surety company or by personal sureties to the satisfaction of said trustee and advisory board and conditioned for the faithful performance of the covenants and conditions of said contract.

Said contract or contracts will be awarded to the lowest and best bidder or bidders, as determined by said trustee and said advisory board.

Said bidders will be permitted to bid on the said building, including foundation walls, complete, without heating, plumbing or lighting, and on the heating, lighting and plumbing jobs, separately, and also on any combination thereof and on said work of construction as a whole.

The right to reject any and all bids is hereby expressly reserved. Only bids for the work as set out in the plans and specifications therefor will be considered.

The estimated cost of said work, complete, is the sum of $49,500.00.

CHARLES ROWE,
Trustee of Johnson School Township of LaGrange and Noble Counties, Indiana.

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

ject, "What the Building Congress Means to the Building Industry of Indianapolis." His was an interesting talk in which he manifested much interest in what the Congress had done and is seeking to do. He lauded the motives and purposes of the body and encouraged members to continue to co-operate earnestly in the great work that is being carried on not only for the good of the industry but the city at large.

This was the last general summer meeting of the Congress, a halt being called until October when the regular monthly meeting schedule will be resumed for the winter season.

COUNTRY GENERALLY NOT TURNING OUT THE NEW BUILDING VOLUME OF FORMER YEARS

June Figures Again Show Varying Degrees of Declines

According to reports made by city building inspection officials to S. W. Straus & Co., building financiers, of building plans filed or permits issued in 579 cities in all sections of the country, there was a loss of 29% from the same month last year and of 3% for the half year ended June 30th. The decline from May was 16%, and, with the elimination of New York City, 14%. The normal seasonal variation from May to June in the principal cities of the country is 11% loss and for the urban districts outside of New York, approximately 15%.

The volume for the half year just passed was $2,016,948,080 compared with $2,083,537,220 for the corresponding period in 1928. The same 579 cities reported $265,147,516 for June this year, and $371,164,175 for June of the preceding year.

Twenty-five Leading Cities

In the group of twenty-five cities in which the greatest amount of activity was shown there was a gain for the half year period of 4%, the comparative figures being $1,315,237,985 and $1,263,860,757. In June, however, these important centers reported impressive declines amounting to 39%. It is to be noted that the bulk of this loss came from New York City where plans filed in June were $37,179,718 compared with $94,672,681 in June last year. San Francisco, Cincinnati, Yonkers, Newark, Oklahoma City and Akron were the only cities in this group which showed signs of increasing building operations on the basis of permits issued last month.

Indiana's and Indianapolis' building performances for June were not of sufficient volume to put either up among the leaders of the country in building activity but other localities, too, that have rated high heretofore have failed to make much of a showing this season, in fact most localities have shown steady declines as compared with last year's work. Hence, Indiana's and her various cities' performances in building are running true to the form shown throughout the country and should not cause alarm.

Building Materials

The falling off in construction activity made itself felt in the building material market. With the exception of steel, all of the materials suffered in some locality or other.

The demand for lumber in general was rather slow. Common brick dealers in Detroit and New York reported especially low activity accompanied by price declines. The price of structural steel shapes has remained unchanged in view of the demands for big building projects in some of the larger cities.

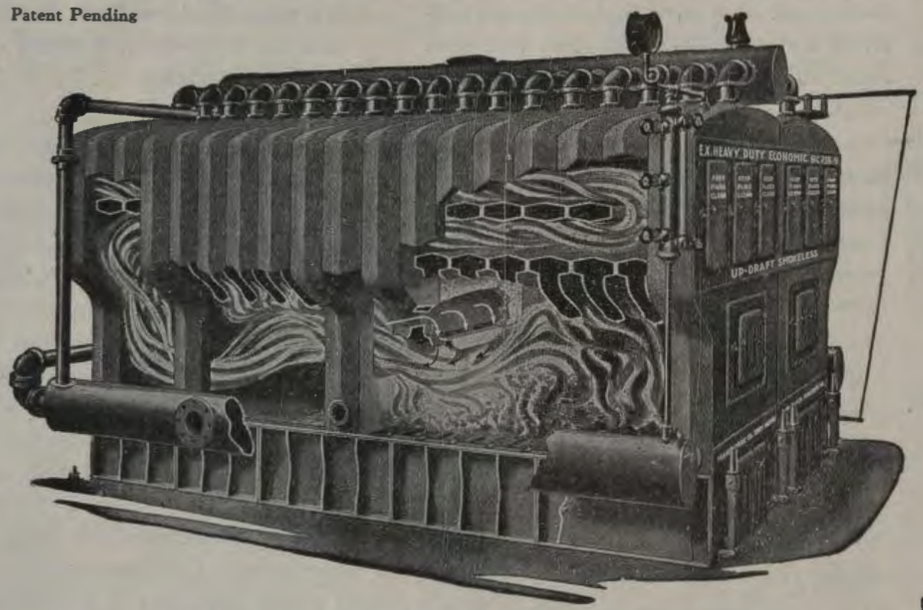
The Labor Situation

The five day week movement for building craftsmen continues with favorable reactions in many parts of the country. While many Chicago builders, regarded as a weathervane in building circles, oppose the five day week on the basis of the overtime problem much favorable sentiment has been expressed in its behalf. The Journal of Electrical Workers and Operators claims that the five day week is already a major victory for labor, and that the present status of this shorter week movement is the termination of a generation of labor education. A review of the five day week plan reviewed in the Monthly Labor Review, published by the United States Department of Labor, indicates that in all sections of the country, with the exception of the South, the five day week has at least gained a foothold. Of great social significance is the statement of Thomas A. Edison to the effect that as the introduction of automatic machinery in industry becomes more general it will be compulsory to have the five day week in order to prevent over-production. George B. Cutten, president of Colgate University, goes even further, saying "The five day week is just around the corner and it does not take a very powerful telescope to give us a glimpse of the five hour day."

CONTRIBUTIONS WELCOMED

Recorder Columns Always Open to Those with Progressive Ideas That Would Improve the Indiana Building Industry

Occasionally we receive from some member or other friend some suggestion as to what in his opinion would embellish the pages of The Indiana Construction Recorder, or add to its value. We wish to assure everyone of our friends that any contribution of that kind is received with greatest pleasure. Even if the article offered or the illustration, report, or whatever it may happen to be, does not exactly meet our own views or ideas upon the particular subject, it may prove to be better than what we have had before and by reproducing it in the magazine, it might arouse others to give some thought to the matter, and induce them to send in their contributions. It might stir still others into taking a hand in the case, just as they would when attending a meeting where any subject of consequence is being discussed. That is one way of finding out what contractors may know or think of matters pertaining to their business. We would, therefore, be pleased to hear from anyone who has a question upon which he would like more information, or possesses facts which he would like to convey to others.



While we are discussing the subject of contributions, it occurs to us that we sometimes may produce an article in The Recorder which may not coincide with the views of some members. They may have different and better views on the subject. We certainly would like to hear from them in such instances.

We are doing the best we can, and have written hundreds of articles for publication, all of which were probably not fully correct or did not contain all the information or points which might have been brought out. But we never receive a "kick," and only once in a great while we get a little pat on the back, with a few complimentary remarks. This leads us to the belief that we have given our readers some worthwhile talks. If we haven't, or if anyone has any good suggestions to make, or desires particular information, let us hear from him.

If you have an idea you think would help the industry, your trade, the business generally send in your contribution to The Recorder.

THE GOOD OF THE WHOLE PARAMOUNT TO INDIVIDUAL INTEREST

So Asserts Indianapolis Mayor in Speech to Builders

Mayor L. Ert Slack, in a talk before the New Members' Luncheon of the Indianapolis Building Congress recently at the Hotel Lincoln, said the civic organizations and business organizations of Indianapolis should work independently of individuals for the upbuilding of the city. "Let us not have any regard for individuals," said the Mayor, "and see what is best for Indianapolis right now. In this campaign that is going to be on us very shortly, the individual makes no difference, but the conditions of the city are important. You are going to find a more complex situation in this city than we have had in a long time. Beware of the smooth politician and also of the sanctimonious citizen. This business of the city government is no different than that of private business institutions. In the business of the city it is business and that is all it is, and we have no time for the politician in this city yet. I believe in city management, and I think you should have it. Indianapolis has built in a constructive and physical manner in the last two years that is going to tell immensely in the next ten and twenty years. The Indianapolis Building Congress and its members have a large credit on this account. The development of the north side of Indianapolis is the most superior and permanent development that I have ever seen in any city. There may have been booms and conditions in other cities but I do not think that they can compare to the conservative permanent growth of the north side of Indianapolis. The city as a whole has just begun to realize the growth in different parts of Indianapolis, and I have been exceedingly disturbed by the lethargic movement on the part of the tax board when they stated that they would not recommend the highroad the city needs and needs badly. The state tax board has its place but when the city of Indianapolis decides it needs a boulevard, it has no business to risk its future on account of the viewpoint of some organization."

The Mayor stated that the concensus of opinion of such organizations as the city board of health should carry weight and respect when their findings have met with the approval of the entire body.

In mentioning the city budget, Mayor Slack stated, "When I took office the city had to assume a bonded indebtedness of one million and a half dollars worth of judgments and we had to borrow money to pay them, because the previous administration had used the money for other purposes. The interest rate on that account is going to cost you one and three-fourths cents this year."

The Mayor concluded by emphasizing the importance of the city hospital improvement, stating that he was glad to assume the responsibility on that account as it is very badly needed. He stated that everybody believes, and he does too, that the airport is going to be worth all it cost. "These two bonded indebtednesses," the Mayor stated, "are the only two items promoted by me during my term of office."

Robert Frost Daggett, president of the Indianapolis Building Congress, presided and introductions of the new members were made from the floor.

The next general meeting of the Congress will be held in October, when it is probable that Harvey Wiley Corbett, noted architect and exponent of the skyscraper will speak on the Chicago World's Fair.

FORT WAYNE BUILDERS TURN ATTENTION TO SUBJECT OF TIGHTER CREDIT

Enthusiastic Meeting Sponsored by Local Associated Building Contractors

Contractors and building men generally are gradually but surely awakening to the realization that something must be done toward establishing sounder credits in the building industry. It is the concensus of opinion that loose credits have done much to lower the bars and allow undesirable and irresponsible elements to flock into the field to the detriment of the business.

The matter has been taken up by the Associated Building Contractors of Fort Wayne and resulted in an interesting meeting recently in that city at which ggeneral and sub-contractors, also material supply men, turned out in force to hear men conversant on the subject speak.

Plans for the affair were handled by George Schack, secretary of the local A. B. C.'s, who engaged Turner Hall and had for speakers Col. George Waldbridge, president of the Allied Construction Industries, Detroit, Mich., N. G. Biddle, general manager of the same organization and founder of its credit bureau, Frank R. Young, Chicago, National Association of Credit Men, and J. E. Vaughn of the Trade Group Department, National Association of Credit Men.

The methods for eliminating loose credits, as put into effect in Detroit by the Allied Construction Industries, were explained and the good that has been effected brought out. Also the evils of careless credit and the dangers of extending it promiscously were set forth in no uncertain terms.

Interest in the meeting was intense and those attending were enthusiastic for the introduction of the Detroit system in Fort Wayne, believing it would go a long way toward the betterment of building conditions in the local field.

PRICE FIXING IS FALLIBLE AND UNETHICAL

It Will Never Work Out in the Building Contracting Field

In practically every business or industry, when operations are proceeding smoothly, a few over-ambitious but strictly unethical members of the industry will cry out to their fellowmen to get together and bring about a distribution at a higher price of whatever business there is and thus establish a shorter lived and false prosperity to those participating. Of course their idea is price fixing. This method, in every sense, legal, ethical and

PRICE FIXING

(Continued from Page 3)

practical, works against its own success, and in a recent article in the Central Constructor, price fixing is interestingly discussed. The occasional advocate of this system should benefit by reading the story. Price fixing rings have repeatedly been built up and repeatedly have failed, yet this has not always dampened the enthusiasm of a few advocates. The code of ethical conduct that governs the members of the Associated General Contractors has done much to bury the price fixing idea, but the ghost of this unbusinesslike practice occasionally stalks into circles of contractors who do not believe they have received their fair share of the building dollar. The Constructor, in discussing the situation, says:

"Not infrequently when contractors gather, someone may be expected to mention the cut-throat competition prevailing in the industry, and the seeming impossibility of obtaining contracts on any basis affording what might conservatively be regarded as yielding even a modest profit. Various remedies may be expected to be suggested and discussed. Not infrequently one of the suggested remedies will be price fixing. The question is asked as to why it is not possible to round up contractors in one meeting, establish among them some basis of computing a minimum profit, and obtain their agreement never to bid below such an established standard. Suggestions in all seriousness are advanced adovcating that a worthwhile state-wide organization of contractor could and should, by the exercise of some form of magic, abate the present highly competitive conditions and supply each contractor with a reasonable volume of business at a fair price. Those who advocate price fixing as a remedy for present conditions are of course in the minority.

False Idea Prevails

"This price fixing myth might be entirely disregarded if it were not for the fact that some really worthwhile people, who ought to be better informed claimed to have the notion that the proposition really possesses merit. As a matter of fact it would be more stimulating mentally to work a cross-word puzzle than to discuss the practicability of price fixing among contractors. It would be much safer and more profitable to enter the bank robbing industry than to embark on any scheme involving the element of price fixing, while the legal and moral standings of the two occupations are about on a par.

Practice Illegal

"Any practice involving the fixing of prices among contractors or interfering with free competition conflicts with both the civil and criminal statutes of the state and nation. Contractors caught in a price fixing deal would stand an almost perfect chance of being permitted to make at public expense an extended personal investigation of conditions is a state or federal penitentiary.

"As a practical proposition, however, the repeal of every law found on the state and federal statute books, and dealing with this situation, would not have any substantial effect upon the matter now under discussion. In the first place, in the absence of any restrictive statutes, it would be absolutely impossible to obtain from all or even from a majority of the contractors of the state, a promise to adhere to any agreement of the character described. Secondly, human nature is so consttituted that if it were possible to herd all of the contractors of the state into one room, and obtain their signatures to a price fixing agreement, a substantial number of such signers would find reasons satisfactory to themselves for breaking such agreement at the first subsequent letting. Furthermore, if it were possible to obtain unanimous adherence to such an agreement on the part of the contractors of the state, and enforce compliance with such agreement and thereby artificially raise the price level on state work, there would be an immediate invasion of out-of-state contractors, and the state people would have on their hands a perfectly lovely price fixing agreemeent but no work. Finally, if the foreign invasion could be repelled, the outraged citizens of the state would attend to the case of the state price fixers with tar kettles and featherbeds, and the aforesaid citizens would not be far outside their rights.

Scheme Proves Futile

"Price fixing usually defeats its own purpose. The effort of the British rubber producers to fix the price of crude rubber furnishes a recent and striking illustration. Their effort to fix prices was not only sanctioned but actually compelled by law. They enjoyed a long profit for an exceeedingly brief period, lost their domination of the crude rubber industry to their Dutch competitors, witnessed the collapse of their pool, and now find themselves in a worse situation than they were originally.

"The farmers, home owners, and business men of the state are entitled to all the advantages resulting from the full operation of the law of fair competition in the building business. Price fixing arrangements are illegal and criminal in their character under statutes sanctioned by public opinion and by every dictate of sound common sense. Attempts at price fixing would place a very powerful argument in the hands of every bureaucrat and political schemer anxious to enlarge his day labor operations. Aside from statutory inhibitions price fixing always ultimately defeats its own purpose.

"In the final analysis, however, American business men engaged in building, and related lines will not engage in price fixing operations because they are jealous of their good names and will insist upon protecting the same by strict adherence to the highest standards of business ethics. They will neither participate in nor give encouragement to any practice calculated to bring their business into disrepute and shock the sensibilities of decent citizens. We suspect that even among those who discuss price fixing in friendly fashion, the great majority would refuse to participate, were the opportunity actually offered.

"Business men are strictly within their rights, however, and are really rendering a distinct public service when they fight unfair competition, whatever may be its form. The responsible contractor is the victim of more than one form of unfair competition. False credit built for the irresponsible by surety bond and mechanics' lien statutes creates one form of unfair competition. Day labor activities of bureaucrats and political schemers constitutes another. Why not abandon the hunt for the pot of gold at the end of the rainbow and close up the ranks for a campaign with real objectives?"

CAPITAL CITY BUILDING CONSIDERABLY OFF THIS YEAR

Will Have To Spurt from Now On To Compare Favorably With Volume of 1928

Building operations in Indianapolis this year show a slump compared with the corresponding period in 1928, according to a report issued by William F. Hurd, city building commissioner.

The record shows $8,830,019 valuation on new building operations this year, compared with $11,985,898 in 1928. Weekly estimates show the same ratio of decrease, since 221 building permits were issued in the week ending July 13, 1928, and only 196 issued during similar period in 1929.

NEW STATE ARCHITECTS' REGISTRATION BOARD DILIGENTLY ENGAGED IN WORKING OUT FINAL DETAILS

General Announcements To Be Made Within a Few Weeks

Many inquiries are constantly being made regarding the new Indiana Architects' Registration Law and when it is to go into effect. The announcement of the appointment of the members of the new Registration Board several weeks ago aroused much interest among the architects of the state and they apparently are eager to know what the requirements will be to qualify for registration.

Naturally there was much to be done to set up the machinery for the proper functioning of the new board, and the newly appointed members have been working hard to whip things into shape. It is probable that along about September 1st, details will have been worked out and as they mature proper announcements will be made.

The board members are doing a great deal of investigation work, it being the intent to incorporate in the Indiana registration provisions the best usages in practice in other states so that when architects' registration is actually brought about in this state the profession, and those of it, will have something that means something and a possession of which to be proud.

INDIANAPOLIS ARCHITECT CHANGES OFFICE LOCATION

Removal Announced

Announcement has just been made by Architect Fermor S. Cannon, Indianapolis, of the removal of his office from 21 Virginia avenue. Hereafter he will be located in suite 407 Kresge building at the northwest corner Washington and Pennsylvania streets.

THE UNSIGHTLINESS OF CITIES

It Is Still Here But Is Giving Away Slowly and Surely

Few cities are pleasing to the eye as cities. One generally gets his first impression of any city from the window of a railway passenger coach. In future a much better conception may be had from the birdseye view possible from an airplane. But in either event seldom is the result anything but most grievously disappointing.

There are too many neglected ackyards and unpainted, weather-stained and dirty wood walls. Too many narrow, pinched roofs, fuzzy from upcurled wood shingles, victims of time and neglect. Too many cluttered-up rear stairways and extended wooden porches that cling to the houses precariously and fungus-like. A veritable plethora of dinginess and decay.

Any of the save-the-surface folk who become jaded on the job should be wonderfully revivified by just one train ride through the railroad approaches to any modern city's union depot.

Some day, possibly, these eyesores will be done away with if the much-discussed education of the public to an appreciation of architecture is brought about, and all the effort put forth for the protection of the public materilizes.

There was a time when cities were even uglier than they are now but then architects were considered more in the light of a luxury than they are today, and, too, there were not building regulations and requirements established by ordinances such as rule generally in this age.

The frontiers of the old haphazard days are marked and it is easy to trace the dawn of organization effort which has brought about improvement. Suburban architecture has taken on better lines, streets are better laid out, with more symmetry and many are paved. The old sheds and fences are gone and yards show care and beautification.

Practically all of this has been brought about through organization effort, for architects and contractors have worked constantly to this end, and only by them working together, co-operating, was it possible to effect a change for better building, more beauty and greater healthful conditions under which to live.

The Indiana Society of Architects can feel proud of the effort it has exerted in this direction. It has required a great deal of work, and many of the aims attempted were considered by some visionary and impractical, but, the earnest men who carried on have had the satisfaction of seeing their dreams move well along toward materialization. Slowly but surely the building industry is becoming organized and as it progresses the unsightliness of cities in Indiana will disappear. The work, in a way has just begun, it is no time to stop now, the thing to do is to exert greater effort than ever and hold the I. S. A. out in the front rank of the army for progress.

DRAFTSMEN AND THEIR FAMILIES HOLD AN OUTING

Picnic and Athletic Program Put On At Noblesville Park

Indianapolis draftstmen, members of the Architectural Club, put in a big afternoon of merriment Saturday, July 27, at Forest Park, Noblesville, Indiana, where the annual outing of the organization was held.

Quite a crowd was on hand, including the families of the members, the afternoon being given over to golf, horseshoe pitching, various athletic stunts and games for the youngsters.

The winners were: Golf, W. W. Warren; horseshoe pitch, V. E. Kniptash; baseball throwing contest for women, Mrs. W. W. Warren; women's golf, Miss McKee; women's horseshoe pitching, Mrs. V. Kniptash.

The program concluded with a picnic supper in the evening.

A picnic and swimming party is scheduled by the club for Saturday, August 24, at Northern Woods Beach, up along White River.

the electrical wiring, Skillman Electric Company, 129 West Market street, $1,295.00, all of Indianapolis.

***Grade School Building** (mechanical contracts): $17,000.00, Taylorsville. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, Stanley E. Hunt, trustee, Taylorsville. STEEL INSURES STRENGTH AND SECURITY

Structural Steel Frames the Beef Cattle Building at the Indiana State Fair Grounds. J. Edwin Kop... Deery, Architects, Indianapolis. Roy C. Bryant, Franklin, Ind., Contractor. Steel Fabricated and Erected... Insley Mfg. Co., Indianapolis.

STEEL FOR THE ST...

Gradually, at the Indiana State Fair Grounds, beautiful, permanent buildings are replacing the rotting, dingy, temporary structures that have long since outlived their usefulness. Great barns and magnificent display buildings framed with structural steel, are being erected to meet modern requirements. As a result of this far-sighted, intelligent management of the State Fair Board in erecting structures framed permanently with steel, Indiana soon will boast one of the finest fair grounds in America. Moreover, steel is helping reduce the upkeep cost of the fair grounds to the lowest possible point, a noteworthy conservation of public money.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

J. Edwin Kopf and Erected ... Architects, Indianapolis. Roy C. Bryant, Franklin, Ind., Contractor. Steel Fabricated and Erected by Insley Mfg. Co., Indianapolis.

STATE FAIR STRUCTURES

When it came to selecting materials for the great fair grounds structures shown above, steel naturally had first consideration. It offered the ideal material. It arrived on the job cut to fit, ready to go into place. It speeded the building processes. It is absolutely permanent, unaffected by freezing or intense heat, unimpaired in strength or durability by rain. Here, as everywhere else, steel proved to be the one building material that is always to be depnded upon. What has been done with steel at the Indiana State Fair Grounds, can be done with steel any where, in any type of building. It is the most economical and most efficient material for all building purposes.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of Delaware township, Hamilton county, Indiana, will receive bids at the Fishers school building, Fishers, Indiana, until 2 o'clock p. m. of Thursday, August 22, 1929, for the erection and completion of, an addition to a two-story high school building, at Fishers, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building, in accordance with the plans and specifications prepared therefor by A. A. Faulstich, architect, and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect, and the state board of accounts. The estimated cost of such work is forty-two thousand ($42,000.00) dollars.

Separate bids will be received on different portions of the work as follows:

General contract, heating and ventilating, plumbing and sewerage, and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms 96 and 96-A as prescribed by the state board of accounts, and sealed, and in every respect must conform to the laws of the state of Indiana. The right is expressly reserved to reject any or all bids, and to use sufficient time to investigate the bids, and the qualifications of the bidders.

Each bid must be accompanied by certified check equal to 2 per cent of said bid. These checks must be made payable to Delaware school township, Hamilton county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his or their bid, approved by the trustee, for the due performance thereof if his or their bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract drawings and specifications and those for the plumbing and sewerage and electric wiring may be obtained from the office of the architect A. A. Faulstich, Cicero, Indiana, and copies of the plans and specifications for the heating and ventilating may be obtained from the office of W. A.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the West Lafayette school city of West Lafayette, Indiana, will receive sealed bids up to 12 o'clock noon on the 16th day of August, 1929, for the erection and completion of a grade school building in said city, said building to be wall bearing and of brick and concrete construction, with dimensions of 135.6x220 feet over all, divided into twenty-five rooms, and to consist of two stories with basement under a part thereof, the estimated cost of which, when completed, according to the adopted plans and specifications, is $200,000. Bids shall be submitted as follows:

(a) General construction;
(b) Plumbing;
(c) Heating and ventilating;
(d) Combined plumbing and heating and ventilating;
(e) Electric wiring.

Combined bids may be submitted for any or all of the above classifications.

The standard of all labor and material required for the erection and completion of said building shall be in strict compliance with the plans and specifications therefor, prepared by Walter Scholer, architect, which are now on file in the office of the superintendent of schools of said city.

Notice is also hereby given that the funds in the possession of said school city and available for the construction and completion of said building aggregate the sum of $125,000 and no more; that by the contract or contracts awarded and entered into by the successful bidder or bidders for the erection and completion of said building no present debt shall be created against said school city in excess of said sum of $125,000, but that said contract or contracts shall provide that the excess over and above said $125,000 shall be paid for currently over a period of four years, plus a sum equal to six per cent upon the unpaid balances thereof, wholly and only out of funds to be created currently by budget and special levy and not otherwise, and that said payments shall be made when and only when the funds arising from said budgeting and special levies have come into the possession of said school city.

All bids submitted must be on blank form No. 96, prescribed by the state board of accounts.

Each bid submitted must be accompanied by a certified check payable to the school city of West Lafayette, Indiana, in a sum equivalent to at least three per cent of the amount of such bid as an evidence of the good faith of the bidder that he will, if awarded the contract, enter into a contract for the performance of the same within ten days from the date of such awards in accordance with and pursuant to this notice.

All bids, together with the certified checks accompanying them will be returned to the bidders upon the making of the awards.

If any bidder, whose bid is accepted and to whom a contract is awarded, shall fail or refuse to execute his contract as herein required, his check will be retained by said school city not as a penalty but as and for liquidated damages.

Each bid shall be filed in a separate envelope on which shall be plainly written the name of the bidder with his address and specifying the classification bid upon.

Each bid shall state the time within which the bidder will complete the work bid upon.

Each bid shall be accompanied by the affidavit of the bidder showing the absence of collusion with any other bidder or bidders.

The successful bidder will be required to execute with his contract a bond in a sum equal to his contract price with a satisfactory surety conditioned for the faithful completion of his contract.

The respective plans and specifications for the work contemplated in this notice may be examined during office hours at the office of the superintendent of schools, or copies thereof may be had from the architect preparing the same, at his office in Lafayette, Indiana, upon the deposit of the required sum to secure the return thereof in good condition.

Said school city reserves the right to reject any and all bids bust shall either accept or reject the same within ten days from the 16th day of August, 1929.

For the Washington High School, Indianapolis, we furnished the reinforcing steel, spirals and accessories; welded wire fabric; hollow metal and tin clad fire doors; concrete inserts; and Baker Removable Wood Joist-Forms.

Baker Removable Wood Joist-Forms are peculiarly suited for school buildings. They are readily adaptable to the long spans over classrooms and the short spans over corridors. A recent trend in school construction is the use of exposed concrete joists, eliminating plastered ceilings. With the Clean Lines and Smooth Surfaces produced with the aid of Baker Removable Wood Joist-Forms, such ceilings are very attractive.

During the past ten years almost one hundred school and college buildings have been erected with the aid of

Vol. XI INDIANAPOLIS, INDIANA, AUGUST 10, 1929 No. 20

STATE'S NEW BUILDING TOTAL FOR JULY MOUNTED TO ALMOST TEN MILLIONS OF DOLLARS

Unusual Volumes in Several Cities Sent Figures to Record Height for the Current Year

Two of the smaller Indiana cities, namely East Chicago and Michigan City, in experiencing an unusually large monthly volume of new building construction work in July, sent the state volume of new work for last month soaring to unheard of heighths this season, making July the banner month of the current year. Five other cities also showed pleasing gains over June and aided substantially in kiting the season's record.

East Chicago by virtue of its almost $3,000,000 total, $2,918,572 to be exact, nosed in ahead of Michigan City's $2,505,150 to lead the whole state with the later city as runner-up. Evansville slipped into fourth place with $798,010 with South Bend fifth, $779,940. Indianapolis posted $1,374,525 for third place but these figures were away under her June record and over 100% back of her July, 1928, total.

Comparisons of July, 1928, and July, 1929, figures show last month's record considerably in excess of that posted for the corresponding period a year ago. Individual comparative figures give seven of the cities listed carying degrees of gain over, July, 1928, with six showing losses, and the same holds good for the July betterment of the June, 1929, figures.

In the final analysis the big increase recorded for last month was due to the spurt put on at the two northern Indiana cities mentioned at the start of this article, otherwise the final result would probably have been close to a fifty-fifty break for July this year as compared with June, 1929, and June, 1928. However, close to $10,000,000 building totals for the state for a month are uncommon, especially in these times, and Indiana is glad for the chance to post a good record at least once this season, a record that should give her a good standing among the other cities of the country.

The figures as submitted by the various city building commissioners and inspectors are as follows:

	July, 1929	June, 1929
East Chicago	$2,918,572	$ 228,009
Elkhart	106,004	75,062
Evansville	798,010	730,661
Fort Wayne	385,575	543,448
Gary	230,800	203,695
Hammond	397,300	261,200
Indianapolis	1,374,525	2,705,970
Kokomo	68,507	100,215
Michigan City	2,505,150	18,990
Muncie	221,277	321,522
Richmond	99,455	95,773
South Bend	779,940	621,515
Terre Haute	82,628	206,344
Totals	$9,967,743	6,112,404

EFFICIENT LABOR REDUCES COST OF CONSTITUTION

Vocational Educational Authority Advocates Thorough Apprentice Training

Costs in the construction industry can be stabilized by the maintenance of highly-skilled, intelligent, and competent workers. This opinion was given by Frank Cushman, chief of the Trade Industrial Educational Service, Federal Board for Vocational Education, in a discussion on apprenticeship methods now in vogue.

There is considerable evidence to support the declaration that the cost of construction is not necessarily increased by higher wages and fewer working hours per week. To a great extent construction costs can be offset by improvement in the quality of building materials, improvement in construction methods, and more efficient mechanics. In discussing various methods of training apprentices, Mr. Cushman emphasized the importance of intelligent cooperation between employers, employes, and the public schools. Efforts of employer groups and schools to develop skilled workers by abbreviated courses have been disastrous.

Suggestions for progress in apprenticeship training were given in Mr. Cushman's statement, which follows:

"While recent developments are decidedly encouraging from the standpoint of the future of apprenticeship programs, it would seem quite evident that the time has arrived for states to enact modern and up-to-date apprenticeship laws to insure equal rights and privileges to all young workers who are enrolled in the apprenticeship program. Such laws, properly drawn, would undoubtedly receive enthusiastic support from labor and from progressive employers and associations of employers as well. They would tend to equalize the cost of training and render it impossible for self-seeking employers to get along without training any apprentices, while other employers with more vision do all the training for them. Such laws, moreover, would dignify the economic and social status of apprentices and assure them of certain rights, respecting education and training which now they are very often made to feel constitute special favors. Modern apprenticeship laws in the states would safeguard the flooding of the labor market with large numbers of half-trained, incompetent, alleged mechanics, who now succeed in worming their way into almost every skilled trade without adequate training and experience.

"In this connection it would seem that major attention has been given to restrictive measures affecting the employment of minors and to compulsory measures affecting school attendance. If laws, wisely drawn to safeguard adequate training, were enacted there would be a decreasing need for laws regulating education and employment, and also for laws licensing workers and employers in many forms of human activity. In other words, instead of constantly increasing the number of half-competent and poorly trained workers in the various skilled trades and then enacting laws to prevent the incompetent from engaging in such occupations as house wiring and plumbing, it would be far more sensible to enact laws which would promote the thorough train-

ESTABLISHED 1897

Delivered— Complete— 30 Days Ahead Of Schedule

In Los Angeles, the new Sears, Roebuck & Co. mail order building covers 57,600 square feet of ground. There are 9 stories, basement, and 220 foot tower.

Erection was fast—even for reinforced concrete. The 25,000 cubic yards were poured in 3½ months. Fixtures were installed just four months from time excavation started. Everything was ready in six months—one month ahead of scheduled time.

Construction is reinforced concrete—mushroom flat slab floor construction. All curtain walls are of the same material, placed at the same time as the floor system and columns. The effect is very beautiful.

All of which again bears out:—*reinforced concrete assures speed, permanence, beauty, strength, economy.*

FIRE FIGHTING BEGINS WITH THE ARCHITECT

He Is the Man to Administer Proper Prevention

Everyone knows of the tremendous fire waste yearly in the United States. It is nothing new, in fact, preventative moves have gained in volume and everything possible is being done to check the great loss.

One of the big reasons for conditions as they exist today is because "we have not learned how to build," according to T. Alfred Fleming, supervisor of the National Board of Fire Underwriters, speaking before a gathering of building material dealers at Pittsburgh, Pa.

"If we were to compare the annual fire loss in the United States with the annual fire loss in Europe we should find that we have a fire loss eleven times greater than all the countries of Europe," he said. "What is the reason? The reason is that we have not learned how to build."

Tremendous Waste

Mr. Fleming said that last year the fire loss in the United States was $472,000,000 and that the loss in lives from fires totaled 10,217. Both figures were considerably below the average of the last ten years. These constant losses are largely due to the fact that instead of building against fire, the American practice is to build in a manner which encourages fire.

This situation really means, he stated, that it costs the United States a billion a year to pay fire losses and the expense of fighting fire, the fire department equipment alone costing considerable in excess of half a billion dollars. He estimated the aggregate at $1,112,000,000.

It is a popular delusion, he explained, that the insurance companies pay most of the fire loss bill. They don't. They merely charge this year's loss up to the insurance buyers next year in increased premiums. They are merely the agents of collection and distribution.

Start with Architect

Mr. Fleming contended that the place to begin fighting fire was on the drawing board of the architect, who should consider in every design he produces four things; design, appearance, cost and safety, with the emphasis upon safety. Combine such a consciousness on the part of the architect with a safety consciousness on the part of the city councils which would result in more rigid safety requirements in building codes and the results would be vastly different. Building codes today are uniform only in their laxity.

The speaker urged a greater use of hard materials, brick, concrete, tile and stone. That is European practice, he said, and results speak for themselves.

ECCENTRICITIES IN BUILDING

Easily Aparent

Speculative builders endeavor to emulate the more successful designs developed by skilled architects, but in doing so they lack the appreciation of detail and refinements which distinguish the work of the real artist. Their products are frequently horrible examples of poor design, even when their inspiration may be drawn from excellent buildings. Those dwellings which retain their values over the longest period of years are those which are conservatively designed. Eccentricities are usually of very impermanent value. They may have vogue for the moment, but as public taste improves and as years go by, the oddities are exaggerated and detract from the value of the property. If one pauses to examine the work of those architectural offices which have achieved the most enviable prestige in the domestic field, one cannot help but note that conservatism is the keynote of their designs. They are rarely guilty of the fault of wasting time or effort endeavoring to achieve something wholly different or unique. Their products almost invariably have high and enduring market value.—T. S. Rogers, in The Architectural Forum.

SHOULD HAVE AN ARCHITECT

Outsiders Beginning to See the Light

The Journal of Commerce, Los Angeles, declares that the public is careless and forgetful and like a child it must be taught. This observation is made in a plea for consistent and continual campaign to educate the public to the advisability of employing architects for all types of construction, be it a home, a commercial or an institutional building. The public, says The Journal of Commerce, does not look upon the architect in the light of utility and service, but rather as the exponent of attractiveness. True as this popular opinion of architects may be, the public must be educated to appreciate the close relationship that exists between the architectural profession and the construction field.

STEEL INSURES STRENGTH AND SECURITY

Structural steel river-crossing towers near the Indiana Electric Company's super-power station at Dressers, near Terre Haute, Ind. Steel fabricated and erected by Insley Mfg. Co., Indianapolis.

STEEL Chief Aid to Super-Power

The "super-power" idea has started America on the road to almost unbelievable industrial prosperity. Everywhere today, abundant electric power is available. Networks of high tension lines criss-cross the countryside. Gigantic steel supporting towers are rising on every hand.

Such advancement was bound to come. But without structural steel, for those power-line towers, and the framework of the great super-power plants the progress of the "super-power" idea would be set back years into the future. Steel made possible the skyscraper and revolutionized the building industry. Steel is now chief aid to super-power. Steel has been, and always will be, in the front rank as the forces of progress march ahead.

KOEHRING

DANDIE

EASY one-man control because charging skip, water, and discharge levers are located at the end of the mixer from where the operator has full view both of charging and discharging operation!

That's just one reason the Dandie 10-S is fast. Clean, high speed charging, fast discharging, the Dandie takes aggregate in the skip and changes it to concrete in the forms in record, money-making time.

Feature by feature, item by item of construction it's the *long service, long distance* great value in its field!

Whatever you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Dandie Mixers: 5-S, 7-S, 10-S

5-S single or four cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

Residence and Garage: $3,800.00, 2-stys. and bas., 3017 Harrison street. Private plans. Owner and builder, Herschell R. Keller, 4705 Tacoma avenue. Frame.

Residence and Garage: $3,500.00, 1-sty. and bas., 1045 Sherman street. Private plans. Owner and builder, Charles J. Koehler, 602 High street. Frame.

Residence and Garage: $3,500.00, 1-sty. and bas., 2938 Lillie street. Private plans. Owner and builder, Zwahlen and Smenner, 313 Tri-State Bank Bldg. Frame.

Residence and Garage: $3,500.00, 1-sty. and bas., 3618 Monroe street. Private plans. Owner, Julian Franke, 451 East Dewald street. General contract awarded to A. M. Zuber, 2801 New Haven street. Frame

Residence and Garage: $3,500.00, 2-stys. and bas., 2226 South Hanna street. Private plans. Owner and builder, Charles J. Koehler, 602 High street. Frame.

Residence and Garage: $3,360.00, 2-stys. and bas., 1612 Franklin street. Private plans. Owner, John S. Lee, 2110 North Anthony boulevard. General contract awarded to R. E. Davenport, 3319 South Harrison street. Frame.

LAFAYETTE

***Grade School Building:** $125,000.00, 2-stys. and bas., 114x220, Columbia, Main and North streets, West Lafayette. Archt., Walter Scholer, 301 Painters and Decorators Bldg., Lafayette. Owner, Board of Education, F. A. Burtsfield, superintendent of schools, West Lafayette. Receiving bids to 12 o'clock noon, Friday, August 16th. Brick, stone trim, structural steel, reinforced concrete, steam heat, composition built-up roof. (Plans on file at the Indiana Construction Recorder, 313 East Market street, Indianapolis.) The following are figuring the general contract: A. E. Kemmer, 3rd and Brown streets, Lafayette; E. Ainsworth and Sons, 1248 Hulman street, Terre Haute. The following are figuring the plumbing and heating: Lane-Pyke-Werkhoff Company, 215 North 10th street; Duncan and Larson, 1620 East Main street; A. C. Sandberg, 920 Main street; Orth Plumbing Company, 509 Columbia street; S. H. Bylsma, 1117 North 4th street, all of Lafayette; Earl Cass, 216 State street, West Lafayette. The Woolever Electric Company, 642 Main street, Lafayette, is figuring the electrical wiring.

Contracts Awarded

Department Store (remodeling): $45,000.00, 3-stys. and bas., 600 Main street, Lafayette. Private plans. Owner, Corey Realty Company, Lafayette. Lessee, Montgomery Ward and Company, Chicago, Ill. General contract awarded to A. E. Kemmer, 3rd and Brown streets, Lafayette. Work consists entire new front, copper set store fronts, plate glass, interior remodeling, new plumbing, electrical wiring, city heat.

MUNCIE

Grade and High School Building (annex): $44,000.00, 2-stys., 84x118, Van Buran, Indiana, Van Buren township, Grant county. Archt., Houck and Smenner, 108 East Washington street, Muncie. Owner, Clinton R. Witmer, trustee, Van Buren. Receiving bids to 11 o'clock a. m., Friday, August 23d. Brick, structural steel, stone trim, steel stairs, composition built-up roof, composition floors, wood floors, toilets, showers, additional radiation. Will include four classrooms, community room, stage.

Sealed Proposals

COURT HOUSE REMODELING

NOTICE TO CONTRACTORS

NOTICE IS HEREBY GIVEN, that on the 19th day of September, 1929, at 10:00 o'clock a. m., the Board of Commissioners of the county of Vanderburgh will receive sealed bids for the furnishing of all labor and materials for the remodeling of the Vanderburgh County Court House, in Vanderburg County, Indiana.

All bids to be submitted and all work to be done, in accordance with the plans and specifications now on file in the office of the Auditor of Vanderburgh county, Indiana, and in the office of Fritz Anderson, architect, 108 S. Fourth Street, Evansville, Indiana.

Notice is further given, that the nature of said remodeling and the estimated cost of the same are as follows:

Concrete repairs, $1,600.00.

General repairs, $30,000.00.

Sheet metal and slate, $16,000.00.

Electrical work, $16,000.00.

Lighting fixtures, $6,000.00.

Plumbing repairs, $4,100.00.

Woodwork varnishing, $2,490.00.

Notice is further given, that each bidder shall file with his bid an affidavit of non-collusion as provided by law, and also file bond in a sum equal to at least the amount of his said bid, payable to the State of Indiana, and signed by at least two freehold sureties, residents of Vanderburgh County, Indiana, or shall file a surety bond with corporate surety thereon. Said bidders shall also be required to file with their said bids, the standard questionnaire

and financial statement, as provided by law.

Notice is further given, that on said day, the board will examine all bids submitted and award the contract for the remodeling of the same, and the successful bidder or bidders will be required to enter into a written contract for the furnishing of all labor and materials in accordance with the plans and specifications.

Notice is further given, that the contract for the various items may be let separately.

Notice is further given, that the Board of Commissioners hereby reserve the right to reject any and all bids submitted.

Dated this 5th day of August, 1929.

THOS. McCUTCHAN,
ALLEN P. WARREN,
JOHN C. STARK,
Board of Commissioners of the
County of Vanderburgh.

Attest:
SAM B. BELL,
Auditor of Vanderburgh County.
August 10, 1929.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of Delaware township, Hamilton county, Indiana, will receive bids at the Fishers school building, Fishers, Indiana, until 2 o'clock p. m. of Thursday, August 22, 1929, for the erection and completion of, an addition to a two-story high school building, at Fishers, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building, in accordance with the plans and specifications prepared therefor by A. A. Faulstich, architect, and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect, and the state board of accounts. The estimated cost of such work is forty-two thousand ($42,000.00) dollars.

Separate bids will be received on different portions of the work as follows:

General contract, heating and ventilating, plumbing and sewerage, and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms 96 and 96-A as prescribed by the state board of accounts, and sealed, and in every respect must conform to the laws of the state of Indiana. The right is expressly reserved to reject any or all bids, and to use sufficient time to investigate the bids, and the qualifications of the bidders.

Each bid must be accompanied by certified check equal to 2 per cent of said bid. These checks must be made payable to Delaware school township, Hamilton county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his or their bid, approved by the trustee, for the due performance thereof if his or their bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract drawings and specifications and those for the plumbing and sewerage and electric wiring may be obtained from the office of the architect A. A. Faulstich, Cicero, Indiana, and copies of the plans and specifications for the heating and ventilating may be obtained from the office of W. A. Breining, consulting engineer, 909 Roosevelt building, Indianapolis, Indiana.

Bidders will be required to depoist $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications, on or before the day of receiving bids.

FRANK KLINGENSMITH,
Trustee.

WALDO PATTEN,
EVERETT KINZER,
J. C. IRWIN,
Advisory Board.

Meade Vestal, Attorney.
Aug. 3-10, 1929.

POSITION WANTED

Estimator, general foreman and engineer. Practical experience on all classes of buildings. Take off and price all trades. Salary reasonable. Address F. E. Blacker, 1319 Brown St., Anderson, Ind.

POSITION WANTED

Practicing architect will be pleased to consider position with well-established firm. Twenty-five years' experience covering all types of building construction. Services available after September 1st. Address, Box 242, Indiana Construction Recorder, Indianapolis, Ind.

POSITION WANTED

Timekeeper — On construction work. Experienced. Can furnish A-No. 1 references. H. Foxworthy, Indianapolis, Phone Lincoln 8701.

EFFICIENT LABOR

(Concluded from Page 3)

ing of apprentices for these and other trades and thus automatically remove the need for restriction and regulation.

"Whatever the results may be in this field during the next ten years, all of our experience up to date indicates the great importance of cooperation in handling this whole question of apprenticeship. Without such cooperation attempts to develop apprentice programs lack stability and permanence. An efficient program of apprentice training for any or all of the skilled trades is not only a good thing for the apprentices concerned but is also a good thing for employers, labor, and for the general public which pays the bill.

"In view of the magnitude of the construction industry and the improbability of any immediate reduction in the importance of construction as a national activity, this matter of apprentice training may well be regarded as an important and, in many respects, a fundamental problem. There is considerable evidence to support the statement that the cost of construction is not necessarily increased by higher wages and fewer hours of work per week. To a very great extent the apparent increase in construction costs can be offset by (1) improvement in the quality and uniformity of building materials, (2) improved methods of construction, and (3) more efficient mechanics. If continued progress is to be made in this field, it would seem to be perfectly clear that one of the principal problems to be solved is associated with the whole problem of maintaining an adequate supply of highly skilled, intelligent, and competent workers to serve the construction needs of the country."

RUNS BEHIND AGAIN

Indianapolis Building For July Eases Up Once More

Better than half a million dollars in new residential work and close to four hundred thousand dollars for new business buildings served to save the July new construction work record at Indianapolis from flivvering. As it was the estimated valuation of work for which building permits were issued last month amounted to $1,374,525. The issuance of

permits was eight hundred and forty-six. Apartment, industrial and public building work was very light only amounting to a little over a hundred thousand dollars. Smaller buildings, such as accessory structures, repairs and alterations, and miscellaneous work, made up the rest of the month's volume, and while sizeable as regards permits issued did not stack up strong in the way of estimated valuation.

The July figures for 1929 indicated a decline again, being 30.8 per cent in arrears of the June level and 49.2 per cent behind July a year ago.

The official record as prepared by Miss Clara Oxley, statistician for the city building inspection department is as follows:

Accessory buildings	174	$ 62,694
Apartment buildings	3	68,000
Business buildings	27	398,440
Industrial buildings	2	38,200
Miscellaneous work	136	86,085
Public buildings	1	12,000
Repairs and alterations	401	187,706
Residences	102	521,400
Total	846	$1,374,525

SECURITY OF STRUCTURAL ENGINEERING STIMULATED THE BUILDING INDUSTRY

Growth of the Business Traceable to Structural Material Development and Means of Application

On the structural frame of a building hangs all of the building and its contents. It must therefore, have two principal qualities: first, adequate strength to perform its work; and, second, the cost must be economical and correctly proportionate to the total cost of the building. These facts were brought out in a bulletin issued by the Structural Engineers of New York. "Correct relations," says the bulletin, "are the basis of social and economic welfare.

"The science of structural engineering has been developed progressively from certain basic engineering data as new demands have been made. The structural materials have been improved steadily both in quality and shapes. In fact, this science of engineering designing and the production of suitable materials have never failed to satisfy every demaand. When we compare the building industry of today with that of scarcely a half-century ago, we have a conception of its tremendous growth. This growth of the building industry would not have been possible except for the facilities and the security provided by structural engineering and the steady improved process of manufacturing structural materials. With very few exceptions adequate strength has been the uniform characteristic of structural frames in buildings. The limited number of building failures can be segregated into two groups. The collapse of trusses or other framed construction is often the result of the primary failure of related parts such as masonry walls, piers and foundations, of which the design and supervision of construction is very often under the control of others than the structural engineer. In the few instances of the failure of structural frames they are found to be caused by incorrect designing, inferior material or improper workmanship. To the credit of the structural engineer, it is found that incorrect designing is an extremely rare cause of failure.

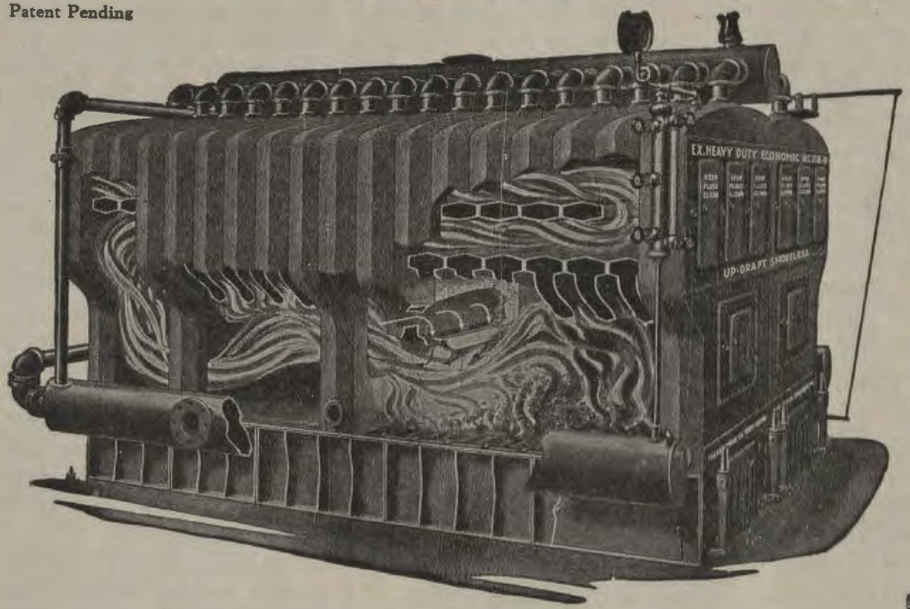
Competent Engineers

"Adequate strength of the structural frame is secured by the employment of competent structural engineers to prepare the plans, inspect the fabrication and supervise the erection. The appreciation of the essentialness of the adequate strength of structural frames by governmental units is indicated by the requirements of building codes and the examination of structural engineering designs by the building departments. These are legal measures intended to safeguard the occupants of buildings from injury or death primarily, and, secondarily, to insure the building investment. The effectiveness of building code regulations and building department examinations is often limited for obvious reasons but such procedures do emphasize the importance of a necessity for correct structural engineering service.

Relationship of Costs

"The designing of a structural frame so as to secure the maximum economy in cost is important. There is a definite and proper relation between the cost of structural frame and the total cost of the building. These comparative costs vary with the type and kind of the structure. To secure profitable building investments it is essential that there exists the correct balance of the cost of the structural frame and the total cost of the building. A design may provide for barely sufficient strength and still be uneconomical in cost of construction, or it may provide for excess strength. These conditions result from incompetent engineering service. Economical designing is not attained merely by employing the established rules of structural engineering but rather by a broad knowledge of the science as it relates to building construction in general and a judgment of values which is the result of experience and observation.

"Too often, the architect, the building owner and the builder fail to realize the value of competent structural engineering service. They do not realize the tremendous development of the art of building. There are structural engineers now in active practice who have witnessed the whole development of modern building construction—greater than in the entire previous history of the world—the beginning of which was coincident with the production of structural steel as a commercial commodity. There is, however, a growing appreciation of the necessity of competent service, both engineering and architectural. There are vast sums of money invested in buildings which do not earn a profitable income. These unprofitable investments are the result of several conditions such as improper site; wrong type of building for the site; and, very often, incompetent engineering and architectural service. To insure profitable building investments, the intelligent and conservative owner, mortgage-bond banker and the purchaser of building securities, are giving increasing attention to the qualifications of the engineer and the architect employed to prepare the designs and specifications.



A Valuable Service

"There are, however, many owners and investment bankers, as well as architects, who do not realize the importance of competent structural engineering service. It is often considered sufficient if the structural plans merely pass the plan examiner at the city hall. To secure such plans at the lowest cost possible appears to them as a good investment and an indication of shrewdness in bargaining for service. A design that will barely pass the plan examiner at the city hall and thus become legal, fulfils only the minimum requirements for strength. Even then it may develop inherent weakness when exposed to unexpected conditions which are quite common in the life of buildings, and it may be uneconomical in the cost of material and its fabrication and erection. There is a correct relation between the required strength of the structural frame, the volume of the material required, its method of fabrication and installation which produces the maximum economy. All of these factors must be studied relatively and co-ordinated correctly. Such a service is valuable and is rendered only by the competent, experienced structural engineer. It can not be secured at a reduced professional fee any more than competent medical, surgical, legal or architectural service can be secured in such a manner.

"Competent structural engineering service adds to the real value of the building because it is adequate in the assurance of strength aand economy. The prestige of the architect, and very often of the contractor, is an appreciable factor in the evaluation of a building and to this the competent structural engineer makes a real and tangible contribution, although unfortunately, it is not generally recognized."

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

TRADE SHOW TO BRING TOGETHER A GREAT GATHERING OF INDIANA BUILDERS IN OCTOBER

Affair, Sponsored by Indiana Building Congress, to Be Held at State Fair Grounds on a Scale Never Before Attempted by State Builders

An event that promises to be the greatest demonstration of the importance of the construction industry of Indiana will take place at the State Fair Grounds in Indianapolis next October. This affair, scheduled for the week of October 21 to 26, inclusive, will be known as the Indiana Building Congress and Trade Show. It will consist of the annual convention of the construction industry of the State, with a membership of over 36,000, in conjunction with an outstanding exhibition of building materials, tools and equipment. The convention and show will be held in the Manufacturers' Building.

The purpose of the Indiana Building Congress is to act as a clearing house for the building industry and to promote the general welfare of that industry. The purpose of the Trade Show is to create a common meeting ground where the manufacturing elements of the industry may compare notes with the construction, labor and customer elements of the industry and discuss and display the latest things in materials, construction and building equipment. It might be called the annual style show of the building industry and no doubt will develop into a great buying mart.

Those attending the Congress, including large delegations of prominent builders from every city of the state, will be addressed by nationally famous men on subjects of vital importance to the industry and the general public.

The Indiana Building Congress represents the best thought and leadership in the industry and is headed by men prominent throughout the state building construction field.

The Board of Governors of the Congress is composed of men representing the architects, the building trades, the building contractors, the engineering profession, the sub-contractors, the building supply dealers and material producers.

The constituent members of the Indiana Building Congress are: Indiana Society of Architects, Indiana Chapter American Institute of Architects, Associated Building Contractors of Indiana, Indiana Engineering Society, Indiana Builders Supply Association, Indiana Association of Electragists, Indiana Society of Sanitary Engineers, Indiana State Building Trades Council, Indiana State Council of Carpenters, Indiana State Association of Plumbers and Steam Fitters, Indiana State Masonry Conference, Indiana Master Painters and Decorators Association, Indiana Structural Steel Board of Trade Associate Member, National Lumber Manufacturers Association.

Each individual member of these organizations is a member of the Indiana Building Congress, all going to make up an influential and powerful membership representative of every branch of the building industry.

The coming meeting and exhibition is of great importance to the general public. This great industry, being the second largest in the country, handling an expenditure of about $7,000,000,000.00 a year in the United States, and about $75,000,000.00 in Indiana alone, has a profound influence on the welfare of the general public and of business in general. This industry is responsible for all building construction that is done in the state. It is second to none in importance except the agriculture. It exceeds in volume of business the great automobile industry, which represents the expenditure of only about $4,000,000,000 annually. General business conditions and the prosperity of the general public are therefore beyond all dispute dependent to a large degree upon the building industry.

It is this great industry that will meet in the Manufacturers Building at the State Fair Grounds next October, to discuss problems whose solution will increase the prosperity of the industry and to bring every person in attendance up to date on the latest materials and methods and equipment. A successful show and convention, with the things heard and seen applied directly to the business of every builder, will result in the public getting more value out of every dollar spent on construction, whether it be in the building of a home, an apartment, a school, a church, an office building, or any other structure.

The Trade Show will be open to the general public each evening during the week.

SUCCESSFUL EXPERIENCE SHOWS APPRENTICESHIP PROBLEM IS BEST SOLVED THROUGH ORGANIZED EFFORT

The Trouble Today Is That Too Many Regard It As Purely an Individual Matter

While there is much said about the training of apprentices in the building trades, and yet so little done apparently in that direction, the reason for such a situation seems to lie in the fact that the effort is not highly organized and that many contractors, in the last analysis, are inclined to the thought that the matter of apprenticeship is best taken care of by allowing each individual to work out his own plans in that respect.

Commenting on the subject, in speaking to a group of Wisconsin builders recently, Walter F. Simon of the Wisconsin Industrial Commission, had this to say:

"Experience in other industries leads to the belief that to tackle the apprenticeship problem as an organization is by far the most successful means of handling it. The closer the cooperation among members the better success they will have. If every graduate apprentice would remain with his original employer indefinitely that would be a different thing. But that doesn't happen. Journeymen drift from one employer to another in the building trades to a greater extent than in any other trade group and a uniform and cooperative apprenticeship scheme in the building construction industry becomes doubly necessary for that reason.

SUCCESSFUL EXPERIENCE

(Continued from Page 3)

"Some master builders make no effort whatsoever to systematize the training of their apprentices. The boys who work for them merely pick up what knowledge of the trade they can and in the end turn out inferior workmen. Other master builders take a genuine interest in their young workers so that the graduates develop into high class mechanics. Sooner or later the graduates of the first employers will be found working for the second, and vice versa, thus throwing an unfair burden of training on some and relieving others of all responsibility in the matter of apprenticeship training. Experience has shown that apprenticeship is decidedly something to be undertaken in an organized way. In fact the day is not far distant when the building trades will follow the example set by certain other trades in jointly hiring a full time specialist in apprenticeship to promote systematic trade training among their membership. That would cost some money, yes, but it would be but a drop in the bucket compared with the present cost of inefficient workmanship. Some master builders believe it is cheaper to hire adult helpers and pay them a little more, rather than bother with younger learners. Incidentally, that extra cost alone would more than pay the expense of an expert to promote apprenticeship for you in the industry. There is nothing gained in hiring older learners instead of boys 16 to 21 years of age. In the long run it is far better for the trade to hire them young. In the building trades it is not very hard for a workman to open a business of his own in competition with his former employers. If he does not go into business for himself until he is, say 32 years of age, and if he did not enter the trade until he was 25 or 27 years of age, he has served the trade as a workman only five or seven years including his aprenticeship. Had he begun his apprenticeship earlier, at seventeen years, perhaps, the trade would have had his services for a period of fifteen years, and when he finally does go into business for himself he will be a more sensible competitor to deal with. No contractor need to fear the competition of a well trained man who is thoroughly versed in his trade. It is the inexperienced, half-trained man who worries the legitimate employer.

"The cost of apprenticeship to both the contractor and the consumer goes on just the same whether the builder hires young learners and calls them apprentices, indentures them, and treats them as apprentices or whether he hires adults and calls them helpers. No matter what the age of the worker, he must pass through the same period of learning and the same period of low production, regardless of what he is paid or how termed.

"Some master builders believe that to apprentice a young learner puts a financial burden on the employer. In answer to that I here repeat a challenge I had occasion to make some time ago. Here it is. If there are any master builders in the State of Wisconsin who have employed apprentices indentured under the terms of the law for the full term of the apprenticeship, who fulfilled their obligations toward those apprentices, and who lost so much as a penny on the deal, name them, and I shall buy each one of them a box of his favorite cigars. I mean that, but I have no fear that anyone will accept the challenge because I know, and those who have experimented with this plan of apprenticeship know, that the average indentured apprentice serving a four-year indenture, is a better mechanic after three years' experience than the average journeyman on the labor market today.

Best Plan in Country

"There is no need for me to waste time pointing out the necessity of applying sound apprenticeship principles to the building trades. Contractors know better than I do the difficulty in finding first class mechanics. An orderly program of apprenticeship is designed to, and does, result in a better class of journeymen. We believe we have in Wisconsin an apprenticeship plan unexcelled anywhere in the United States. Our labor laws and educational laws are such that every possible encouragement is given employers of skilled labor to promote apprenticeship. They can not be said of any other state in the union. Several other states are now contemplating legislation similar to our apprenticeship law and several foreign states already have copied it. Incidentally, please do not think that our apprenticeship law is a new fangled piece of legislation, untried and visionary. We know now that apprenticeship laws existed over 2,000 years before Christ walked the earth.

"In trades in which our apprenticeship law has been taken seriously and given a fair trial, it has been found to be a most effective way to produce the kind of mechanic you are looking for. To show you that it is long past the experimental stage, thus far over 2,100 apprentices have completed a full apprenticeship and are now journeymen. That fact alone certainly would indicate that there is something to the system, that it is practical, and that it does for the trades all that is claimed for it.

"For the benefit of those who are not familiar with the requirements of the apprenticeship law, let me say briefly that, among other things, it asks of the employer to put his promise to teach the trade in writing in the form of an indenture on blanks furnished by the Industrial Commission. This applies in all cases where the minor is from 16 to 21 years of age. In this indenture, or written contract of apprenticeship, the apprentice promises to work faithfully for his employer for the duration of the term of apprenticeship common to the trade, to attend a part-time school four hours weekly for a total of 400 hours to learn the theory of the trade, and to work for a prearranged schedule of wages. The employer in turn agrees to give the learner an opportunity to learn the entire trade as carried on by himself, and to keep the apprentice for the period of apprenticeship as far as that is possible. The Industrial Commission, representing the state, acting as the third party to the contract, arbitrates any differences that may arise between employer and apprentice, determines what is good cause for annulment of indentures, and in general, makes every effort to see that the agreements are enforced.

Does Not Dictate Wages

I want to take this opportunity to nail any misunderstandings some might have in respect to certain features of the law. I want to emphasize the fact that there is nothing in the reference to what wages shall be paid apprentices, nor does the Industrial Commission lay down any rules or orders telling employers what they shall pay their learners. We do, however, strongly recommend that the members of each trade agree on a uniform schedule of wages in each community. It would not do, for obvious reasons, for one master plumber to pay eight dollars a week and another fifteen dollars for apprentices with the same length of training. That makes dissatisfied apprentices.

"Nor does anyone attempt to tell employers what they shall teach their learners or how those things shall be taught. That, too, is left to the trade to determine through the operation of joint state and local committees. It should be clearly understood that the law does not hamper the trades in the least degree in working out their own detailed plans as to wages or schedules of training.

"A common misunderstanding of the Wisconsin plan of indenturing apprentices is that once such a contract has been entered into the apprentice must be kept throughout the full membership regardless of what happens. That is a mistaken impression. Any contract may be annulled upon application of either party to the agreement and if good cause is shown. If the employer finds after six months that he made a mistake in the selection of an apprentice, if he finds, for example, that the boy is not fitted for the work the contract involved is cancelled by the Industrial Commission. There are some twelve or fourteen other legitimate reasons

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

***High School Building:** $600,000.00, 3-stys. and bas., "Irvington High School," located at Riley avenue and East Washington street, Indianapolis. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Mech. Engrs., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. An increased bond issue is proposed to build this school, decision to be made August 27th.

Public Garage Building: $500,000.00, 7-stys. and bas., 68x195, 147 East Market street, Indianapolis. Archt., Rubush and Hunter, 430 American Central Life Bldg., Indianapolis. Owner, G. and A. Realty Company, Fred C. Gardner, William A. Atkins, Edward W. Springer, care of architect. Plans in progress; will probably award contracts soon. Stone exterior, reinforced concrete and steel construction, fireproof, business rooms on ground floor, steam heating system, composition built-up roof, steel sash, plumbing, electrical wiring.

***Factory Building:** $200,000.00, 1- and 2-stys. and bas. (103,000 sq. ft. of floor space), Martindale and Roosevelt avenues, Indianapolis. Archt., Charles E. Bacon, 605 Odd Fellows Bldg., Indianapolis. Owner, U. S. Corrugated Fibre Box Company, H. J. Lacey, president, 1315 Martindale avenue. Plans about completed; will probably take bids soon. Reinforced concrete exterior walls, composition built-up roof, steel sash, steam heating system, concrete floors.

***Residence and Garage:** $6,500.00, 1-sty. and bas., 26x40, Brookside road, Indianapolis. Archt., Charles E. Bacon, 605 Odd Fellows Bldg., Indianapolis. Owner, Otto Hoffman, 1328 South Alabama street. Architect is ready to receive bids now. Brick veneer over frame, asphalt shingle roof, wood casement sash, warm air heat, tile bath, hardwood floors.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 81, located at 19th street and Parkway boulevard, Indianapolis. Archt., Kopf and Deery, 620 K. of P. Bldg., Indianapolis. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. An increased bond issue is proposed to build this school, decision to be made August 27th.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 82, located at English and Emerson avenues, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. An increased bond issue is proposed to build this school, decision to be made August 27th.

***Public School Building** (addition): $50,-000.00,0 2-stys. and bas. (School No. 15), located at 501 North Beville avenue, Indianapolis. Archt., W. H. Albersmeier, 508 Rauh Bldg., Indianapolis. Mech. Engr., Bevington-Williams, Inc., 1139 K. of P. Bldg., Indianapolis. Owner, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. An increased bond issue is proposed to build this school, decision to be made August 27th.

***Public School Building** (addition): $45,-000.00, 2-stys. and bas., School No. 49, located at 1902 West Morris street, Indianapolis. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Mech. Engr., W. A. Breining, 909 Roosevelt Bldg., Indianapolis. Owner, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. An increased bond issue is proposed to build this school, decision to be made August 27th.

Consolidated Grade School Building: $45,000.00, 1-sty. 75x125, Hamilton county, Wayne township. Archt., Norman H. Hill, 1050 North Delaware street, Indianapolis. Owner, Charles Boden, trustee, Noblesville. Plans in progress, ready for bids about September 1st. Brick, stone trim, steam heating plant, composition built-up roof, plumbing, electrical wiring.

Warehouse Building (addition): 1-sty., 80x130, Maryland and Shelby streets, Indianapolis. Archt., Norman H. Hill, 1050 North Delaware street, Indianapolis. Owner, Standard Grocery Company, Chester Jackson, 419 East Washington street. Architect is receiving bids to 4 o'clock p. m., Thursday, August 22d. Brick and concrete block, structural steel steam heat, unit heaters, composition built-up roof, electric controlled automatic doors, steel sash, cement floors, plumbing, electrical wiring. The following are figuring the general contract: W. A. Sides, 121 North Grant street; G. G. Bertels, 955 North Bradley; M. M. Andrews Company, 405 Peoples Bank Bldg.; W. E. Van Landingham, 311 Lemcke Bldg.; Newt S. Ikerd, Linden Hotel; Vincent Waggoner Construction Company, 3916 Hillside avenue; Paul V. Matkin and Company, 703 Union Title Bldg., all of Indianapolis.

Residence and Garage: 2-stys. and bas., 70x80, Pennsylvania street near 43d street, Indianapolis. Archt., Fermor S. Cannon, 407 Kresge Bldg., Indianapolis. Owner, Fermor S. Cannon, 407 Kresge Bldg. Re-

WEERE THE ARCHITECT COMES IN

George Rogers Clark Commission Soon to Hold Architectural Completion for Selection of a Memorial Design

Interest in Indiana for quite some time has focused more or less on Vincennes and the sesquicentennial celebration of the capture of Fort Sackville and the consequent winning of the Northwest Territory by Gen. George Rogers Clark and his intrepid heroic band of hardy soldiers of the American Revolution.

The celebration, a fitting commemoration of the event that added a wealth of territory to the budding United States, has passed into history, but the effort to mark appropriately the spot of that early frontier triumph is just getting under way and is a source of interest especially, to the architectural profession.

Taking cognizance of the situation the Indiana Society of Architects, in the interest of its members has gone into the matter of the means to be employed for the selection of the design and construction of the George Rogers Clark Memorial under contemplation.

The inquiry sent out has elicited this information from William E. Parsons, Chicago, architectural advisor, to the Sesquicentennial Commission, for the conduction of a competition for the selection of an architect to plan the memorial:

"The George Rogers Clark Sesquicentennial Commission has been established by resolution of Congress to erect at or near the site of Fort Sackville in Vincennes, Indiana, a permanent memorial commemorating the winning of the Old Northwest and the achievements of George Rogers Clark and his associates in the War of the American Revolution.

"Funds for the design and erection of the Memorial have been authorized by Congress, sufficient funds to carry on the designing of the Memorial and to start its construction have been appropriated, and its site has been acquired.

"The commission desires to erect such a memorial as will have an aesthetic value comparable with its historic importance. To this end it proposes to institute an architectural competition for the design of the memorial structure and for the selection of an architect.

"The competition will be open to all qualified architects who are citizens of the United States of America in addition to several architects who will be invited to enter the competition. Applications for entrance into this competition are to be addressed to Mr. William E. Parsons, 80 East Jackson Boulevard, Chicago, who has been appointed by the Commission as their Architectural Advisor for conducting the competition. These applications are to be made by letter stating the applicant's name, address and his associates if in a partnership or corporation. The applicant shall state his education, training and experience, together with a list of his most important architectural works, his affiliations with professional societies and business references. No application will be accepted after September 15, 1929.

"The programs of the competition will be forwarded to those architects whose applications have been approved by the Qualifications Committee, on or about October 1, 1929. The duration of the competition will be between three and four months.

"The program of this competition will be subject to conditions of the American Institute of Architects."

MODERNISM INFLUENCES BOTH EXTERIOR AND INTERIOR

Trend of Design Has Compelling Effect All Around

Because the modern movement in architecture represents the greatest period in creative design since the Fourteenth Century, we must expect to find a similar trend in interior decoration, says Mrs. Rachel Raseman, Detroit artist.

"The first steel and concrete building appeared about 1893, and since that time a new school of architecture, belonging peculiarly to our times, has been steadily developing. The first great modernists were more engineers than architects. The new architectural form has been based upon line after line of vertical steel, interspaced with concrete, faced up with brick, stone or marble and vertical row after row of plate glass windows. This has given us the new school of vertical architecture, which depends on structural honesty rather than ornamental detail.

Following this movement we see all about us evidences of the new decoration. Because it follows the architectural movement, Mrs. Raseman prophesied that it has come to stay and that straight line furniture and new designs based on the function of the object are being developed.

These new forms have the spirit and rhythm of modern life and will be assimilated gradually into our modern interiors, concludes Mrs. Raseman.

STEEL INSURES STRENGTH AND SECURITY

Hilgemeier Bros., Inc., of Indianapolis, built for years of service when they employed structural steel for the new loading platform of their great meat-packing plant. Wm. P. Jungclaus Co., contractors; George S... architect; steel fabricated and erected by Geiger & Peters, Indianapolis.

BUILD WITH SPEED

Structural steel is not only the strongest, safest and most thoroughly reliable of all building materials . . . it has the great added advantage of providing the most rapid means of construction. Nowadays, more than ever, time means money. The sooner a structure is finished, the quicker it begins to pay dividends.

Steel saves time because it comes to the job ready to go into place — immediately. All its characteristics are known. It can be used anywhere with complete confidence. Where-

ural steel for ... example of structural steel framing is this foundry, built for the Remy Electric Company, by the In... rs; George ... Bridge Company, Muncie, Indiana. Modern business everywhere today builds with steel, which meets every requirement of safety and dependability.

EE BUILD WITH STEEL

ever construction calls for speed — and where doesn't it? — you see steel serving with the utmost expedition. Steel construction is the most efficient — most modern — type of construction for every kind of building from skyscraper to dwelling. Steel has great adaptability. A steel structure can be altered, remodeled, extended or removed, faster and with less expense than any other type of building. Obsolescence can be postponed and returns extended for a longer time. Whatever you build, investigate how much better, faster and more economically you can build it with steel.

Sealed Proposals

NOTICE TO CONTRACTORS

SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn County, Indiana, that it will on Thursday, September 5th, 1929, at 10 o'clock a. m. at the North School Building in Aurora, Dearborn County, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Bldg., Indianapolis. Plans and specifications have been adopted and approved by the Building Company, and various boards of the State of Indiana, excepting the State Board of Accounts.

Plans and specifications are now on file in the office of the North School Building, in the office of the State Board of Accounts and in the office of the architects.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Harry S. Theurmer, president of the School Building Company, to be held by the Company as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts, will be returned within ten days.

Should a successsful bidder fail to execute contract and furnish surety bond as required, he shall forfeit the amount of such check to the Building Company as liquidated damages.

Harry F. Shuermer,
President,

SUCCESSFUL EXPERIENCE

(Concluded from Page 5)

for asking cancellation of indenture. In fact, since 1915 when this plan went into effect, we have never once enforced the fulfillment of an apprenticeship contract where by so doing a hardship would be worked on either party.

"Another common misunderstanding is that an indentured apprentice can not be laid off under any circumstances. That is wrong. While we very strongly recommend that the indentured apprentice be the last to be laid off, if absolutely necessary the apprentice may be laid off. However, there are very few legitimate master builders, the only ones who ought to be allowed to have apprentices—who cannot keep at least one apprentice employed the year around. They can afford to keep an apprentice busy because of the low wages usually paid. Laying off apprentices is bad business for all concerned, and the master builder, or any other employer, who has the interest of apprenticeship at heart manages somehow to keep his learners continuously employed. Those who are uncertain as to whether they are able to employ an apprentice for the full calendar year, and who for that reason hesitate to enter into an apprenticeship agreement with a minor, may make provision for the seasonal nature of the trade in filling out the indenture. Instead of specifying the length of the apprenticeship as four years, simply say four building seasons. That ought to satisfy the doubtful ones.

An Age of Education

In conclusion, I want to point out the fact that the trend in society is upward—continuously upward. People who today believe themselves living in poor circumstances would have been considered fairly well situated and comfortable 25 years ago. Only 20 years ago people of means were the only ones who could send their children through high school. Comparatively very few families today are so poor that they can not give their children some high school education. The enrollment in our universities has increased by leaps and bounds. So many students are clamoring for admittance at the doors of our higher institutions of learning that entrance requirements must be raised higher and higher to keep the number down. Young people and their parents are no longer satisfied with a minimum of education. More and better training seems to be the cry.

"In the face of this popular demand for more and better training, how can an industry and as important as that of building construction afford to follow an antiquated, loose and unsystematic course in training skilled workers, or to follow no course at all? We all know and admit that methodical apprenticeship training is badly needed in the building game. The building industry is one in which men of a high order of skill always will be necessary. Machinery can not very well replace mechanics. The Wisconsin apprenticeship program is sound, it is fair to all parties concerned, it has and is producing results, it is the surest, quickest and most economical method of training mechanics."

POSITION WANTED

Estimator, general foreman and engineer. Practical experience on all classes of buildings. Take off and price all trades. Salary reasonable. Address F. E. Blacker, 1319 Brown St., Anderson, Ind.

POSITION WANTED

Practicing architect will be pleased to consider position with well-established firm. Twenty-five years' experience covering all types of building construction. Services available after September 1st. Address, Box 242, Indiana Construction Recorder, Indianapolis, Ind.

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

Vol. XI | INDIANAPOLIS, INDIANA, AUGUST 24, 1929 | No. 22

COUNTRY'S BUILDING VOLUME SHOWED GREATER IMPETUS WITH COMPILING OF JULY REPORTS

Last Month's Volume of New Work Ran Somewhat Ahead of That Recorded for Month of June

New building construction work, as a whole, throughout the country indicated a slight upward trend for the period of the month of July. This according to the figures for the issuance of permits for new work last month. The increase was nine per cent over the figures recorded for June this year. However, the July record for 1929, $289,156,107, as against $332,312,452 for the corresponding period a year ago, was thirteen per cent off.

These figures are the result of the regular monthly survey of the building construction situation of the country made by S. W. Strauss & Company, building financiers, and are compiled from returns made by building inspection officials of five hundred and seventy-seven representative American cities, from Maine to Texas and Washington to Florida, a range of territory covering forty-eight states and the District of Columbia.

Indiana with close to a $10,000,000 total of new buliding last month stepped up among the leaders, edging into ninth place amongst the twelve showing the best records for July, and at the same time East Chicago and Michigan City went into fourteenth and seventeenth place respectively among the first twenty-five cities showing the most new construction work last month, quite a performance for those smaller Indiana cities, particularly so since Indianapolis, Ft. Wayne, Evansville, South Bend or Gary failed to place.

The twenty-five cities referred to turned in a grand total of $169,012,131 of new work launched, quite a sizeable sum, and yet this was ten per cent loss from the July, 1928, total of the twenty-five leading building cities. The cheering part about the above total is that it is twenty per cent in excess of the volume registered in June, this year, for the cities that made the honor roll at that time.

Building Materials

Building material markets showed little changes from the preceding month and prices remained rather stable. Most fluctuations that were reported were local in character. There seems to be a tendency for weakness in the brick and lumber outlook but the other materials, especially structural steel, are holding their own.

The Labor Situation

Considerable unemployment is evident in the large cities, but there is virtually no labor trouble in the building industry. A serious strike of 60,000 workers was threatened in New York the first of the month but an arbitration agreement was reached which if successful will regain for these workers the five-day week and the 10 per cent wage increase granted on May 4 by the Building Trades Employers Association, to take effect August 24; this agreement had been rescinded by the employers as a result of the failure to arbitrate a dispute involving the electricians. Some agitation is being started by builders in New York, Chicago, Philadelphia and other large cities to evolve some adjustment tribunal in which jurisdictional disputes may be settled. On July 15, St. Louis electricians were granted a five-day week, a wage rate of $13.20 for an eight-hour day and an insurance benefit estimated to amount to $2.80 a day.

DIRECTORS OF STATE BUILDING CONGRESS TO MEET AUG. 28

Session To Be Held at Lincoln Hotel, Indianapolis

An important meeting of the Board of Governors of the Indiana Building Congress has been called for Wednesday, August 28, at the Lincoln Hotel, Indianapolis. The board consists of Merritt Harrison, president; Charles W. Kern, vice president; William Smith, treasurer; Earl Carter, L. J. Granger and Frank P. McNutt. These men were elected by their various professional and trade groups to act as representatives to the congress and in turn were elected directors under the organization order of the congress.

There is a wealth of routine matter and also important new business to come before the directors for consideration and disposal at the meeting. One of the features of the session will be a review of the progress made along plans for the big trade show and meeting of the congress which is to be held at the State Fair Grounds in October.

CONCERTED AND INTENSIVE MOVE STARTED TO WEED OUT "THE IRRESPONSIBLES"

Action To Be of National Scope

As a decisive move in a program launched to safeguard the public from the acts of irresponsible contractors, the Bureau of Contract Information has just been incorporated under the laws of Delaware.

Data on the manner in which each general contractor in the United States has fulfilled past contract obligations is to be gathered and utilized in an effort to eliminate conditions that have made for irresponsibility in the construction industry. This was just announced by the Associated General Contractors of America and comes as the culmination of several years of debate about practices involved in the writing of surety bonds.

The undertaking is a venture in cooperation between surety companies and organized contractors although it is independently organized as a fact gathering and investigating agency.

Through this bureau the actual work of gathering and compiling the business histories of some 26,000 firms listed as construction companies is being started under the direction of S. M. Williams, who is the manager of the Engineering Construction Division of the Contractors' Association. With the active backing of the organized contractors Williams represents, it is anticipated that this effort to make available the facts regarding the responsibility of every contractor will be carried to a successful conclusion.

ARCHITECTURAL REGISTRATION SOON TO BE PUT INTO OPERATION IN INDIANA

New Board, After Much Effort, Has Details About Completed

Indiana architects, all, will be interested to learn that it won't be long now before things will be in shape to start the registration of architects as provided for in the law of that character passed by the last session of the state legislature. It may have seemed, to some, that it has taken considerable time to get the registration law into effect, but one must not overlook the fact that complete machinery for its successful operation had to be set up before anything could be done toward putting the law into execution. First the Registration Board had to be appointed, resulting in the naming of these men: Architects L. A. Turnock, Chmn.; Fermor S. Cannon, Robert Frost Daggett, Engineer Louis W. Bruck, Prof. W. A. Knapp, Purdue University, and John H. Owens, secretary. That accomplished, the board members found an almost infinite amount of detail work to be accomplished, but they have been right on the job and are now about ready to begin executive operation.

Consider Final Details

At a recent special meeting of the board at the Lincoln Hotel, Indianapolis, a draft of by-laws was submitted for consideration and aproval, routine business was transacted and rules and regulations for those applying for registration were adopted. Further, the board was authorized to affiliate with and become a member of the National Council of Registration Boards, which is a clearing house on registration matters and passes on reciprocal courtesy between states having architectural registration and licensing laws in effect.

Board to Open Office

It is the intention of the new Architectural Registration Board to open a permanent office Sept. 1st in the senate cloak room at the State House, and to employ a stenographer who will be on duty regularly under the direction of Secretary J. H. Owens.

Owing to the physical inability of the board to arrange and prepare completely all rules and regulations providing for registration by Sept. 1st, as provided for by law, the members have extended the time to Oct. 1st and will not prosecute or entertain any prosecution move until after the latter date.

Seek to Give Indiana the Best Possible

In order that no stone may remain unturned to give Indiana the best that has been gained from past experience along the lines of architectural registration, Chairman L. A. Turnock and Sec'y. J. H. Owens were authorized and instructed to go to Chicago, Ill., for a conference with Emery Stanford Hall, president of the Illinois State Architectural Commission. The latter is also secretary of the National Council of Registration Boards. It was the concensus of opinion of the Indiana Registration Board that such a conference would afford a maximum of information, from the combined experiences of the boards of other states, that would prove of inestimable value to the new board in the pursuit of its duties.

The intent and aim of the board, having actuated the members from the start, is to place the standard for registration on a par with the highest of other states for the benefits that will accrue to the individual through reciprocal privileges with the other states, and also for the prestige it will give to the Indiana architectural profession.

Blanks to Be Mailed Out Soon

Just as soon as the necessary blanks and forms for official registration are printed, they will be sent out to all Indiana architects by mail. It is suggested that if any Indiana architect fails to receive the said blank forms by the middle of September, he write in to the board for same in order to be on the safe side by October 1.

AMONG THE ARCHITECTS

A Few Personals

A. C. Bohlen, well known Indianapolis architect, junior member of the architectural firm of D. A. Bohlen and Son, 1001 Majestic Bldg., is enjoying a vacation trip through Europe.

* * *

Harry Phillips Bartlett, Indianapolis architect, is vacationing with his family at Lake James in northern Indiana. So far "Phil" has not "flashed" any big fish stories back home.

* * *

Architect E. R. Austin, South Bend, of the architectural firm of Austin & Shambleau, who has been ill for a month or more, is reported to be recovering encouragingly.

GOES TO FIVE-DAY WEEK

Pittsburgh Building Now Being Done on That Working Basis

The Building Trades Employers Association of Pittsburgh has come to an understanding with the Building Trades Council of that city. They have agreed that the trades shall only work five days a week hereafter. It is said that about 18,000 men are affected. There was no increase in the rate of wages, the trades preferring to keep that question out of the consideration of the subject.

Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, State of Indiana, Department of Conservation, Division of Fish and Game, George Manfield, superintendent, State House, Indianapolis. Plans in progress. Frame construction.

Residence (addition and alterations): $2,000.00, 1-sty., Tri Lakes, Indiana. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, State of Indiana, Department of Conservation, Division of Fish and Game, George Mannfeld, superintendent, State House, Indianapolis. Plans in progress. Frame contsruction.

***Church Building** (colored): $50,000.00, 2-sty. and bas., 50x90, northeast corner of Walnut and West streets, Indianapolis. Archt., Harold J. Schoen, 5901 Lowell St., Indianapolis. Owner, Shiloh Baptist Congregation; Rev. Judge I. Saunders, pastor, 2649 Northwestern avenue, Indianapolis. Permit granted; owner builds by day work. Brick, hollow tile and cement block walls, stone trim, steam heating plant, asbestos shingle roof. Will have balcony completely around auditorium, seating capacity, 700. Will have Sunday school rooms and kitchen in basement.

Sorority Chapter House (addition and alterations): $40,000.00, 3-stys. and bas., Washington and Durham street, Greencastle. Archt., Virgil Hoagland, 1307 New City Trust building, Indianapolis. Owner, Delta Zeta Sorority, Mrs. Catherine J. Benson, 2210 Park avenue, Indianapolis, chairman of board of trustees. Plans completed, ready to receive bids. Brick veneer over frame, brick veneering present building, moving present building, new foundation, slate roof, new steam heating plant, new wiring, new plumbing, metal lath, stone trim, wood sash, new hardwood floors, structural steel, wood joinsts, shower baths, tile work, landscaping. Will accommodate 40 students. Will contain living, dining and two guest rooms, library, house mother's suite, kitchen, pantry, study rooms, wash rooms, private baths, lounge rooms, two dormitory rooms, chapter room, stage, ball room, dressing room, suply and boiler room. Addition, 30x60, present building 30x70, both 3-stys.

***Warehouse Building** (addition: 1-sty., 80x130, Maryland and Shelby streets, Indianapolis. Archt., Norman H. Hill, 1050 North Delaware street, Indianapolis. Owner, Standard Grocery Company, Chester Jackson, 419 East Washington street. Bids in, under advisement.

STEEL INSURES STRENGTH AND SECURITY

For economy and service, a great power and light company used structural steel for this coal handling equipment. The steel was fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

STEEL is Dependable

Steel stands the stress of weights and loads, the pull of movement and vibration. Wherever some especially hard service is demanded, steel gets the call, because with steel there is no guesswork, no gambling on its performance. For steel's strength, its ability to perform a given task, its sturdiness and durability—all are known absolutely in advance of its use. Steel, therefore, is the safest, most trustworthy of materials. No matter what type of structure you have in mind, you will be safer and better satisfied if you build it with steel.

KOEHRING

One Man, End Control — places operator where he easily sees every man working about the mixer—sees the *loading* of the charging skip, sees the *discharging* of the concrete!

— within his easy reach are water control, skip hoist, discharge chute and engine clutch safety knockout levers!

This in itself is a surprising factor of faster operation and a greater day's yardage!

Here's your all-'round mixer — the 14-S — not too large for smaller work, and big enough for average buildings, bridges, etc.! Capacity range 2 bags 1-3-6 to 4 bags 1-1½-3!

The Koehring 14-S Construction Mixer has high speed, clean, swift, charging and discharging! Know Koehring Heavy Duty construction! *Know the Koehring!*

. . .

FROM whom you buy your equipment is almost as important as *what* equipment you buy! You get a continuing interest and service with equipment you buy through this organization which appreciates that time is money for you.

Write, phone or wire for literature

Sealed Proposals

NOTICE TO CONTRACTORS

SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn County, Indiana, that it will on Thursday, September 5th, 1929, at 10 o'clock a. m. at the North School Building in Aurora, Dearborn County, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Bldg., Indianapolis. Plans and specifications have been adopted and approved by the Building Company, and various boards of the State of Indiana, excepting the State Board of Accounts.

Plans and specifications are now on file in the office of the North School Building, in the office of the State Board of Accounts and in the office of the architects.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Harry S. Theurmer, president of the School Building Company, to be held by the Company as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts, will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required, he shall forfeit the amount of such check to the Building Company as liquidated damages.

Harry F. Shuermer,
President,
John E. Martin,
Vice-President,
Joseph R. Houston,
Secretary-TTreasurer.

LEGAL ADVERTISING

For Building Construction

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

Individual surety companies interested in the bureau have likewise agreed to pool their records. Questionnaires are rapidly being forwarded to contractors in order to obtain data direct from them as to their past performance and qualifications.

Costly delays that ensue when a contractor defaults on his contract, forcing his surety to take over and complete the work, have long been recognized as a source of loss and annoyance to the public which is deprived of the use of the improvement and suffers from the inconveniences attendant while construction operations are unduly extended.

The losses to surety companies, material and supply interests and the construction industry generally are conceived to be equally great. By having a record of the past performance of contractors available through an unbiased fact finding agency it is conceived that surety companies will be able to more intelligently judge of the ability of a contractor to carry through the contract on which they are called upon to write bonds guaranteeing performance.

The contractors' association through its general manager, D. A. Garber, has issued a call to every responsible contractor in the country to support this bureau by submitting information promptly when it is required.

In arguments during past years, charges of carelessness made against surety companies by contractors have been countered by citations indicating that contractors have failed to give accurate information about their businesses. The extensive and sometimes acrimonious debate on these points appears to have prepared the way for active cooperation and both groups are pinning their hopes on the success of the Bureau of Contract Information, Incorporated.

FAMOUS ARCHITECT TO ADDRESS INDIANA BUILDERS IN FALL

Prominent Hoosiers Identified With Construction Industry Sponsor Building Congress and Trade Show

One of the many notable men scheduled to address the coming Indiana Building Congress and Trade Show will be Dr. Allen D. Albert of Chicago, famous architect and assistant to the president, Chicago World Fair Centennial Celebration. Dr. Albert, who is also noted as a public speaker, will be a guest of honor on Architects' Day, Wednesday, October 23rd.

The Indiana Building Congress and Trade Show, sponsored by the organized building industry of the State of Indiana, will be held at the State Fair Grounds in Indianapolis during the week of October 21 to 26 inclusive.

An outstanding list of speakers has been provided to speak on subjects of vital importance to the building industry.

At the coming Indiana Building Congress and Trade Show, problems vital to the builder will be discussed, and the newest materials and equipment will be shown. The man who visits the Congress and Trade Show will profit by gaining information that he can pass along to his clients in terms of a better building—greater building value for the client's building dollar.

This, for instance. During the progress of the Building Congress and Trade Show, various demonstrations and courses of instructions will be staged by material firms that will be of immediate interest and benefit to everyone in the industry, and will show the way to greater efficiency and economy.

A Great Industry

One great purpose of the Indiana Building Congress is to aid in the stability of the building industry of the State. This industry, second in importance only to agriculture, and the greatest manufacturing industry in our business fabric, could achieve even greater importance if the peaks and valleys of its production curve could be flattened out. The result would be lesser demand for labor when work in other industries is plentiful and greater demand for labor when other employment is slack.

Even when new work is slack, there is an enormous market for remolding old buildings. Therefore, with new construction needed to provide for the constant increase of population, with the constant replacement made necessary by obsolescence and depreciation and fire losses, there is always plenty of work to keep the building industry active, and to permit its continuing prosperity to bring continued prosperity to the general public.

Prominent Men Involved

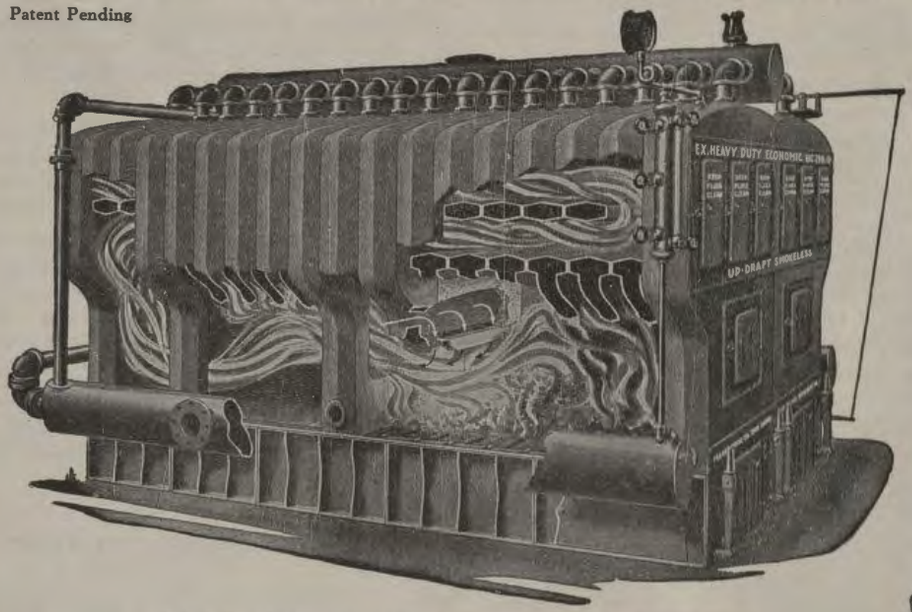
Leading men of the construction industry are identified with the Indiana Building Congress and Trade Show. The Exposition Committee consists of men of the following representative professional and trade groups: Architects—Merritt Harrison, Indianapolis; Carl D. Norris, East Chicago; Arthur Bohn, Indianapolis; George Allen, LaPorte; and D. J. Zimmerman, Indianapolis. Engineers—Earl D. Carter, Indianapolis; Prof. Jas. Hoffman, Purdue University; and J. Emmett Hall, Indianapolis. Building Contractors—Wm. Smith, Indianapolis; Ross Eshelman, Anderson; and F. A. Burget, Terre Haute. Heating and Plumbing Contractors—G. T. Watson, Indianapolis; A. C. Sandberg, Lafayette; and J. H. Daniels, Gary. Electrigists—G. W. Nunn, Evansville; L. J. Granger, Hammond; R. A. Brassie, Lafayette. Painters and Decorators—George Ehrman, Fort Wayne; John C. Caldwell, Evansville; and Jesse G. Marshall, Indianapolis. Builders Supplies—John Suelzer, Jr., Fort Wayne; John H. Panebaker, Kokomo; and Frank P. McNutt, Crawfordsville. Building Trades Council—Chas. W. Kern, Indianapolis; Henry Gabler, Hammond; and John L. Mears, Hammond. Carpenters—F. B. MacCombs, South Bend; G. F. Ackerman, Indianapolis; and Alex Martin, Anderson. Plumbers and Steam Fitters—Chas. B. Simms, Indianapolis; Chas. Schaffer, Anderson; and James J. Doyne, Gary. Masons—Thomas McBride, Whiting; Chester Kiser, Terre Haute; and David Lewis, Fort Wayne. Material Producers—John Griger, Indianapolis; R. H. Dickson, Indianapolis; and William Wallace, Lafayette.

JURISDICTIONAL DISPUTES

How to Settle Them to Draw Attention of Labor Men

The jurisdictional trade disputes and how to settle them will again be called to the attention of the Building Trades Department, American Federation of Labor, when it meets in annual session this fall at Toronto. A number of International Unions and particularly local Building Trades Councils, are much worried. The constant grind of trying to keep harmony among workmen on jobs, is causing them to believe that the old days of the National Board for Jurisdictional Awards, were best for the industry and peace of mind of all concerned.—(Bulletin, Bldg. Constn. Employes Ass'n., Chicago.)

OVER IN KENTUCKY



Louisville Contractors Take a Rap at Bid Peddling

An excellent set of rules for general contractors—to break up pernicious peddling and to discontinue dealings with subcontractors who cut prices are given by the General Contractors Association of Louisville, Kentucky. One of their rules is:

"It must be positively understood that every bid tendered and every price quoted to any general contractor must be the lowest and best the first time. Any subcontractor reducing his quotations, after the general contractor has submitted his bid, will be barred from figuring with or quoting to any member of the General Contractors Association. In other words there must be no shopping by either party concerned."

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

PROX BOILERS are designed with large even sized flues which affords better draft, cleaner flues and results in maximum heating surface of the boiler being utilized.

MORE RESTRICTED CREDIT SYSTEM AND IMPROVED ETHICS ARE THE CHIEF NEED OF THE BUILDING CONSTRUCTION INDUSTRY

So a Prominent Chicago Contractor Views the Situation

The solution of troubles which beset the construction industry is centered in two efforts, first to place relations between general and sub-contractors upon a more honest and ethical basis and second, the establishment of a more sound basis of credit, Oscar A. Reum, Chicago contractor, declared in an address at the convention of the Associated Building Contractors of Illinois at Hotel Sherman.

"There are well-informed men in our industry who think that the question of credits is at the root of all of the evils in the building business," he said. "Unlike most business, the construction industry has no well-defined credit system. In a large measure this is due to the lien laws. Commodity dealers are content to look to such laws for protection. Contractors, and especially sub-contractors, seem to consider the possible job more important than the question of payment or of the credit of their principal. They often use the force of union affiliation as collection agencies.

No Uniformity in Bids

"It is not unusual for twenty-five or thirty-five general bids to be submitted in the competition of a given job, which also means the time and expense of hundreds of sub-contractors competing for the same job. Variations in figures submitted range in thousands of dollars. This clearly shows that even taking cognizance of inevitable mistakes due to excessive bidding, there is no approximately uniformity of thought upon the part of the bidding, there is no approximate uniplans and specifications for the given project.

"This, in my opinion, is a prolific means of discredit upon all who are in the industry as contractors. This is evidenced by the fact that even after the closing of bids, the competition does not end and in fact, really starts in earnest. Thus we have a situation of complete demoralization which, of necessity, is coupled with deterioriated workmanship and material.

Standards Are Lowered

"The loss of personal contact between specialized contractors, owner and architects is one of the greatest factors in the lessening of standards for responsible specialized contractors. No business can indefinitely continue successfully for anyone under such wasteful conditions. This is exemplified by the fact that in a competition where price is supreme, ethical and responsible contractors, both general and specialized alike, find it impossible to compete."

Concerning the evils attendant on the lack of a thorough credit system, Mr. Reum said:

"One of the facts developed in the consideration of credits as a remedy for present day ills in the business was the knowledge that the material dealer in many instances helps to create excessive and irresponsible competition by giving large and unsound credits, and when collections become too slow and unsafe, becomes himself a silent partner in an enterprise unsubstantial from the beginning, in futile effort to recoup losses that never should have been made."

* * *

The foregoing article on credits and ethics which appeared some time ago in an issue of the Chicago Journal of Commerce, was written in consequence of an address delivered at a convention of the Associated Building Contractors of Illinois.

The fact is mentioned that the question of credit is at the root of the evils in the construction industry, and also that unlike most other lines of business the contracting has no well defined credit system, which, in a large measure is due to the existing lien laws.

Among fair minded builders and material men much dissatisfaction has been caused on account of the frequent misuse and unfairness of the lien law, which sentiment is growing more pronounced every day. Consequently many organizations throughout the country are involved and are endeavoring to devise means for changing or repealing that law's unfair revisions.

SEEK TO SECURE VALUABLE DATA FROM WRECKED BUILDING

Effort Made to Determine Effect of Age on One of Chicago's Original Skyscrapers

What are the signs of old age in a skyscraper? How long should a modern steel frame structure last? Which is the more important in determining the life of an office building: depreciation or obsolescence?

An effort is being made to answer these questions by a study of the Tacoma Building in Chicago, the world's first steel frame skyscraper. The study has been conducted by Paul E. Holcombe, research engineer of the National Association of Building Owners and Managers.

The data obtained through a study of the Tacoma Building as it was being wrecked, after nearly forty years of service in Chicago's loop, to make way for the new One LaSalle Street Building which will tower fifty stories above LaSalle and Madison Streets, will be turned over to the depreciation committee of the National Association.

The committee will use the information as a part of its presentation to the bureau of internal revenue in seeking to arrive at a proper basis for allowing depreciation deductions in income tax schedules filed by office buildings throughout the United States. The information will likewise be published to furnish a basis to property owners for setting up proper depreciation reserves in the financing of their buildings.

"In view of the fact that the Tacoma Building was the first steel frame skyscraper in the world and hence the oldest structure of its kind, the National Association of Building Owners and Managers decided to make the study of the building to determine the effect of age upon skyscrapers," said Lewis B. Ermel-

INDIANA ARCHITECTURAL PRODUCT APPEALS TO WOMAN IN FAR-AWAY FRANCE

Terre Haute Architects Have an Unusual Experience

If you were a firm of Indiana architect and should receive a letter from a foreign country across the seas ordering a set of plans for a house to which the foreigner had been attracted by seeing them published in an American magazine, and the order asked nothing about the price of the plans and suggested they be sent C. O. D., you'd be stepping high wouldn't you? Well, that is what befell Johnson, Miller, Miller & Yeager, well-known architectural firm of Terre Haute recently. One morning the mail carrier delivered to their offices at 819 Ohio street, a letter addressed to "Mr. Johnson Miller, Terre Haute, Indiana, Amerique," from Mrs. Marthe Machin, 25 Rue de Berger, Belfort, France, ordering a set of plans for a house the firm had made for Frank Ranahan, Edgewood Grove, Terre Haute, and which had been published in House and Garden, a New York magazine, May last, where she had seen them. Her letter, in rather quaint English, and beautifully printed because she couldn't write long hand, reads:

"Dear Sir—In the Americain publication, House and Garden, May 23, I saw the picture of your very charming little house, and desirous to build exactly the same here in France, I permit me, sir, to ask if you will be so kindly to send to me the entire plan of your house. I will forward the money as soon as I receive the plan or maybe you prefer send it C. O. D. It's as you like.

"Hoping although the disturbance that I cause you that you will answer me favorably. With all my thanks will you accept my respectucuses salutations.

"P. S.—I do not know very much English and hope you will excuse me if me letter is not quite correct."

Although it is contrary to their usual custom to furnish plans in this manner the unique request from far-away France so impressed the firm that a copy of the plans were forwarded by return mail to the French woman, and Frank Ranahan will be proud of the fact that a duplicate of his beautiful little home is being erected on foreign soil, a tribute to the architectural skill of a firm of Terre Haute architects.

The plans referred to were submitted in a contest at the Builders Congress at Chicago this spring and won a substantial prize in the competition.

RESPONSIBILITY

Architect Owes It to Himself, His Profession, His Community to Be Active in Civic Life

"Our architecture is dependent on what we do, not on what we say, and what we do is dependent on what we are.

"We, as individuals, have a personal responsibility, not only to our profession, but to our community and it is our duty to take an active part as citizens in those civic undertakings where our specialized training may be of benefit."—C. Herrick Hammond, A. I. A.

WHAT KIND OF A CRAFT ARE YOU?

There Are Three Classifications

There are three kinds of members in all organizations: The rowboat people, the sailboat people, and the steamboat people.

The rowboaters always must be pushed or pulled along.

Those on the sailboats move only when a favorable wind is blowing.

But the steamboat people move along through calm or storm. They are the masters of themselves and of their surroundings.

We need more people of the steamboat variety. In which class are you?

You're the doctor, and you must do your own diagnosing and classifying.—(Master Builder, Milwaukee, Wis.)

COMMENT FROM A SISTER STATE

Excerpts From Bulletin of Illinois Society of Architects

When the architects get through making all the filling stations look like St. Mark's in Venice, and the movie houses like the Taj Mahal, they might do something about car barns.

* * *

"When we mean to build,
We first survey the plot, then draw the model;

And when we see the figure of the house,
Then must we rate the cost of the erection,
Which if we find outweighs ability,
What do we then but draw anew the model."

—Shakespeare, in "Henry IV."

* * *

"Naturally we think pretty well of our material. But we are not burdened with the idea that it can be used for all types of homes. Some designs demand face brick or wood, while others call for stucco. And as much as we'd like to sell our product, we don't want it used out of place."—(One of those firms not trying to grab everything in sight.)

* * *

Personally, I was thinking of getting a new car, but decided to have the mortgage renewed on the old one. Now it runs just as good as new.

its intentions to sell bonds to build this school, bond bids to be in at 11 o'clock a. m., December 27th.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 82, located at English and Emerson avenues, Indianapolis. STEEL INSURES STRENGTH AND SECURITY

This 160'x360' addition to the machine shop of the Chrysler Corporation, Newcastle, Ind., is framed in structural steel, fabricated and erected by the Pan-American Bridge Co. of Newcastle.

Build More Safely---*With Steel*

Steel is the strongest, most reliable building material known to man. It is manufactured and fabricated by responsible concerns. It is inspected and supervised at every step in production. The finished material is delivered to the job ready to erect. The uncertainty of the human element is minimized. Before you contract for a large or small structure *investigate steel.* Find out how steel has saved time and money for forty years, what it will do, and why.

Sealed Proposals

BOND SALE
SCHOOL BUILDING

Notice is hereby given by the undersigned school trustee and advisory board of Clinton school township, Putnam county, Indiana, said township officials will create and incur an indebtedness of the said Clinton school township in the aggregate amount of twenty-six hundred eighty ($2,680.00) dollars by issuing the time warrants or bonds of said school township in the aggregate amount of twenty-six hundred eighty ($2,680.00) dollars.

Said time warrants, or bonds shall bear interest at the rate of six per cent per annum, payable semi-annually, on the 1st day of January and the 1st day of July of each year, except the first installment of interest which has accumulated from the date of the time warrants or bonds, to July 1st, 1930, shall be paid on July 1st, 1930, and the said indebtedness so to be created and the said time warrants so to be issued, shall become due and payable as follows: $400.00, July 1st, 1931; $400.00, January 1st, 1932; $400.00, July 1st, 1932; $400.00, January 1st, 1933; $540.00, July 1st, 1933; $540.00, January 1st, 1934.

All of said time warrants, or bonds shall bear date of the 10th day of September, 1929.

The money obtained as a loan upon said time warrants or bonds so to be issued is to be used for the purpose of the construction of a new addition to the present school building, and the repair of the said present school building at what is known as "Center High School" in said township.

There now exists an outstanding bonded indebtedness against said Clinton school township in the aggregate sum of seventeen thousand ($17,000.00) dollars, and the net assessed valuation of property in said township is the sum of $984,715.00.

The said time warrants, or bonds, together with a transcript of the record of said issue will be ready for delivery on the 10th day of September, 1929.

The said time warrants, or bonds will be offered for sale at the office of the undersigned trustee at his home in Clinton township, Putnam county, Indiana, on the 10th day of September, 1929, at 10 o'clock a. m. Said issue will be sold for not less than par with accrued interest thereon at the time of sale.

Witness our hands, this 17th day of August, 1929.

W. W. NEWGENT, Trustee.
CLAY MAGILL,
Z. B. BURKETT,
W. S. BOCK,
Advisory board of Clinton school township.
August 31

NOTICE TO CONTRACTORS
SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn County, Indiana, that it will on Wednesday, September 18th, 1929, at 10 o'clock a. m. at the North School Building in Aurora, Dearborn County, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Bldg., Indianapolis. Plans and specifications have been adopted and approved by the Building Company, and various boards of the State of Indiana, excepting the State Board of Accounts.

Plans and specifications are now on file in the office of the North School Building, in the office of the State Board of Accounts and in the office of the architects.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Harry S. Theurmer, president of the School Building Company, to be held by the Company as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts, will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required, he shall forfeit the amount of such check to the Building Company as liquidated damages.

(Concluded from Page 3)

ing, executive secretary of the organization, in announcing the projected analysis. "There are two forces which begin to destroy the usefulness of buildings as soon as construction parts. They are depreciation and obsolescence. Our experience has led us to fear the latter more than depreciation, since well constructed buildings which are properly maintained should last more than two score years. Obsolescence, however, is a destructive force that is more difficult to analyze. In fact, I know of no accurate formula for calculating obsolescence. There are buildings which are scarcely more than ten years old which have already become obsolete in so far as the purpose for which they were constructed in concerned.

"The Tacoma Building is by no means the first steel frame skyscraper to be wrecked to make way for bigger buildings of the more modern type. Its antiquity, however, affords an unusual opportunity for research work, which should be of value not only in determining depreciation allowances, and to setting up proper depreciation reserves, but should be productive of much valuable information for architects and builders, who seek to build long life into the new structures."

BUILDING COSTS VARY CONSIDERABLY IN DIFFERENT LOCALITIES OF THE COUNTRY

This Is Particularly True of Residence Work

Residence construction costs in the United States vary considerably in the different localities. The Department of Labor has made a survey of cities having a population of 500,000 or more. In thi group construction costs were the highest in the capital city, Washington, and the lowest in St. Louis, Mo. The figures for these cities were $8,534 and $3,619, respectively.

In fourteen cities permits were issued for 30,323 one-family dwellings, the average cost of these, as stated in the permits, being $5,169. The City of Washington built the most costly single dwellings, as $8,534 per dwelling was spent in the capitol city for erection of this type of dwelling. In St. Louis permits were issued for 934 one-family dwellings and the average cost was $3,619. The average cost in Baltimore, a little more than forty miles from Washington, was $4,001. In other words, the average single-family dwelling for which permits were issued during the first half of 1928 cost more than one hundred per cent more in Washington than in St. Louis or Baltimore. It is not possible to ascertain from the figures whether Washingtonians are building more elaborate houses or are paying more for their construction.

Purchasing Power of the Dollar in Building Field Increased

The purchasing power of the building contractor's dollar, according to the Greenebaum Sons Investment Company survey, expended for materials is now appreciably above the average level which prevailed in 1926, the previous record year of the building industry. This is shown by an examination of material prices in principal markets of the country made by the research department of the investment concern. It also revealed that contractors generally are now giving greater value per dollar of contract than formerly.

According to the most reliable data, the contractor's dollar spent for paints and varnishes is now worth approximately $1.15 compared with the $1 expended for these materials in 1926. The purchasing power of the lumber dollar has increased nine cents on the same basis and that of the brick to $1.08. The $1 paid out for cement is worth $1.06 in terms of the 1926 dollar, and that spent for structural steel appraises at approximately the same.

For all the materials the builder's dollar is found to have an average value of about $1.05 by comparison with two years ago.

SAFE HOME FINANCING METHODS

Government Advances Outline For Prospective Home Builders

Financing a home often appears to be an insurmountable problem to prospective home owners. Many of the ways open to them are costly, and in order to avoid mistakes that may bring disaster, the United States Department of Commerce has issued a booklet which is designed to assist them. In announcing the issuance of the booklet, the department declares:

"Hundreds of thousands of families who set out to own their homes each year find financing the most trying problem they have to surmount, according to the Division of Building and Housing, which has just issued the booket "Present Home Financing Methods." This booklet, which has been prepared with the co-operation of leading home financing agencies, is written to assist home buyers and home builders who have to borrow and also for persons and organizations who are interested in improving local home financing facilities.

Proper Way Saves Money

"Choosing a helpful home financing agency and a good plan of financing may save a family from much unnecessary expense, or even determine the success of the undertaking. In order to avoid costly mistakes a family, particularly if it has to borrow more than can be obtained on a first mortgage, needs to know something about the sources of home loans, and the types of services furnished by the agencies supplying them.

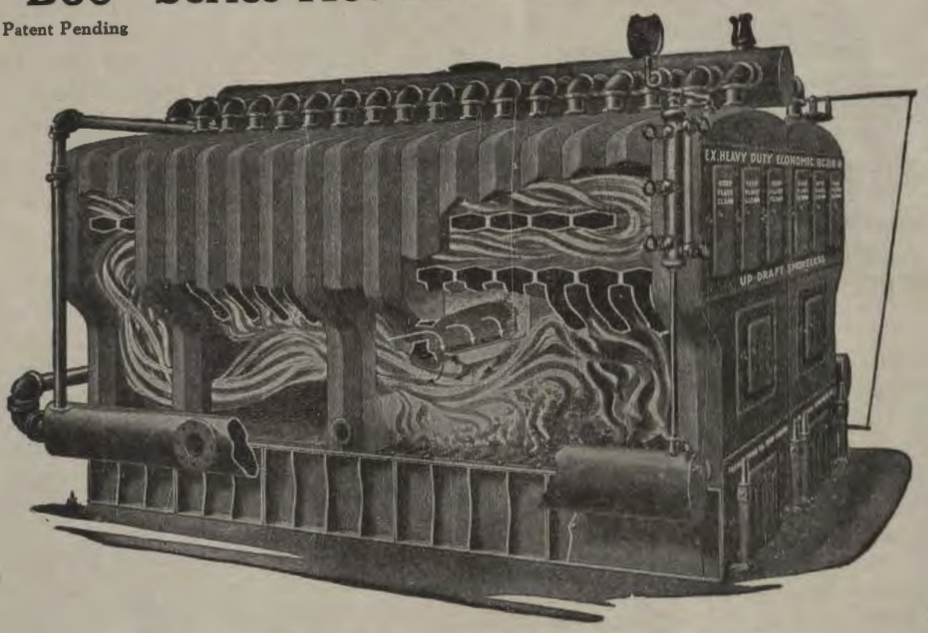
" 'Present Home Financing Methods' describes the services rendered by building and loan associations, life insurance companies, savings banks, trust companies and other agencies which lend to home seekers, and also takes up second and third mortgages and the land contract method of purchase. It points out various pitfalls to be avoided, and gives much practical information, such as suggestions for use in applying for loans.

Discusses Second Mortgages

"The discussion of the second mortgage, a subject of vital interest to thousands of homeseekers, deals with the methods and practices of second mortgage lenders, and the effect of discounts and commissions on the interest rate paid by the borrower. Since the borrower is usually required to curtail the loan periodically, and therefore, does not have the use of the whole amount for the entire loan period, the discount rates of 4 to 10 per per cent a year, which are common in many localities, actually work out to be considerably higher.

"In fact, under the usual regularly amortized loan the real discount rate is approximately double the nominal rate. On a typical second-mortgage loan, for example, running for three years on the monthly payment plan, and at a 7 per cent nominal interest rate and with a 15 per cent discount (5 per cent annually, so called) the actual rate of interest paid by the borrower on his outstanding balances is approximately 18 per cent a year.

"The appendix of the booklet explains in simple terms how answers to similar problems may be found by prospective borrowers who wish to compare different loan plans available to them.



High Rates Have Discouraged Many Home Builders

"In many communities the high rates charged for second mortgage funds have tended to discourage home building, but instances are given of successful efforts by public-spirited local groups to improve such conditions. 'Present Home Financing Methods' is designed to cover the subject more fully than was possible in 'How To Own Your Home,' a publication with a sale of more than 350,000 copies to its credit, which was put out several years ago by the Department of Commerce as part of its program to promote home ownership and to encourage voluntary local efforts to safeguard the interests of families who build or buy their homes.

"These publications may be obtained from the Superintendent of Documents, Government Printing Office, Washington, for 5 cents. Remittances should not be made in stamps."

QUALITY CONSTRUCTION AT REASONABLE COST WILL STABILIZE BUILDING INDUSTRY

The Business Needs United Policy, Good Guidance and a Good Will Account to Establish Its Rightful Position

Methods of speeding quality construction at reasonable cost in keeping with the enlightened knowledge of health and service are essential if the building construction industry is to be placed on the plane it deserves. The general contractor should be a leader of forces in the progressive march.

Such was the contention of A. P. Greensfelder, President of the Fruin-Colnon Contracting Co., St. Louis, who in addressing a recent annual gathering of the Associated General Contractors of America, held at Chicago, said:

"Construction is a progressive art," he declared, "and changes as rapidly as demand, material, and methods warrant. Construction as an industry has been slow to recognize its real place and function in America. This is due largely to the fact that it is an interwoven industry and that many of its elements interweave with those of other industries. A plant not only rolls structural iron and steel rails, but also metal for transportation and agricultural industries as well. Construction materials are also used not only in new construction but in the maintenance of old structures. Construction financing involves not only loans and bonds for new construction, but the refinancing of previous issues. Construction labor owing to seasonal operations must necessarily find occupation in other industries as well.

"Construction as an industry is badly in need of a complete analysis and appraisal. The national groups of construction elements should realize this and join in a united program for such an analysis. A general contractor, as the name implies, should be a general leading such forces on a progressive march. America as a nation is young as compared to our European and Oriental neighbors. It has evolved by pioneering its way through several centuries of natural wilderness. It is only within the last century that its civilization has reared great structures in our large communities and has spanned the nation with modern ways. It has never evolved a national construction policy. Even today, it has no definite construction goal.

United Construction Policy

"The construction industry is like a large family without parental leadership or guidance. The children are scrambling for a livelihood in a highly competitive world. A family reunion is the first requisite. It seems a peculiar condition when owners, designers, constructors and producers of construction material cooperate so poorly. Every structure built requires all such parties. Why is it then that such people who are in daily contact should avoid cooperation, or even worse, view each other with suspicion? It is time we changed tactics.

"America must compete with the world; and the world competition, through modern transportation and communication, is rapidly becoming an international problem. It is an interesting bit of psychology that men and women adorn themselves for their own pleasure and mutual approval. Families build beautiful homes to which they invite their friends. The men of these families then spend half of their waking hours mostly in ugly offices and factories. Hard headed bankers have long realized the merit of beautiful banking structures and yet frequently discourage loans to clients for similar purposes. Going to and fro, we pass many old and dilapidated buildings. When, however, we go on a vacation, we select places of interest and beauty as our objectives. We curl our lips at the word aesthetic and view with scorn the artist and his work. Isn't it time we went the whole way and gave beauty its true value? A city beautiful is a civic asset; a state beautiful attracts millions of tourists; a country beautiful would be a world-wide achievement.

Greater Construction Demand Per Capita

"It is a long way from the log cabin to the modern home; from the little red school house to the community vocational school; from the mud by-way to the hard paved highway. The demand per capita for construction has increased and with foresight and good salesmanship on our part, can increase some more. We are spanning our rivers and railroads with bridges. We are deepening and straightening our waterways. Highway paving is in its infancy. We have a theater in every neighborhood. Our hotels are finer than royal palaces. Libraries and art galleries are needed in every community. Water that runs in through pipes and out through sewers is no longer a luxury. Electric light and power is abroad in the land. Gas for cooking and heating is the modern fuel. Smoking chimneys are doomed and no longer are counted commercial assets. Airports and hangars are needed. Every new apartment necessitates new laundries, dairies, bakeries, and restaurants.

"American farms produce more food than consumed. Perhaps we can interest them in growing building materials instead. It will help us both. Construction costs can decrease and consumers will increase.

Construction Good Will

"On the books of nearly every business in America is the item of good will. Why general contractors are the exception to

SPEED
Plus
Good Looks for PACKARD

This clean-cut reinforced concrete job for the Packard Motor Company, Detroit, Michigan, was remarkably fast. First column concrete was placed September 1st, and last roof slab finished September 19th. That is speed *with capital letters!*

Warehouse is 3 stories high—with allowance for 2 more—and has a total floor space of 160,200 square feet. 11,200 cubic yards of concrete and 480 tons of reinforcing steel were used. Flat slab construction gives freedom from ceiling beams and their shadows. Upturned spandrel beams allow ceiling height windows.

(With examples that have been quoted during the past months, who could doubt the great speed, beauty, permanence and economy of reinforced concrete construction!)

SOMEBODY SLIPPED ONE OVER ON THE INDIANA ARCHITECTS

New Law Just Discovered Has Caused Quite a Commotion in Architectural Circles

Who put this across?

The attention of the Indiana Society of Architects has been called to what looks like a fast piece of work at the last session of the State Legislature, and one wonders just what Architects and Engineers Registration Laws cover if situations like this are to prevail.

It has to do with House Bill 24 covering Municipal Airports. Section 6, is headed by bold type reading, **Contracts—Advertising—Plans, Specifications Not Necesary —Emergency.**

Here is the subject matter that has caused architects to wonder.

"SEC. 6.—In the letting of any contract for the improvement or repair or equipment of any lands or property under the control of said board of aviation commissioners, involving the expenditure of more than fifteen hundred dollars, the board of aviation commissioners shall in the matter of adopting plans, giving notices and receiving bids, be subject to the provisions of said "Act concerning municipal corporations," aproved March 6, 1905, and acts amendatory thereof and supplemental thereto, governing similar action by the board of public works of any such city: **Provided, however,** That it shall not be necessary for such board of aviation commissioners before advertising ror proposals for the furnishing of hangars for any municipal airport acquired or maintained hereunder, to adopt complete drawings and specifications for the construction of such hangars, but it shall be sufficient for such board to adopt and place on file in its office specifications giving the size and capacity of the hangars to be furnished and require bidders to furnish with their proposals complete drawings and specifications for their work: **Provided, further,** That in case of an emergency involving the safety of human life due to accident or act of God, such emergency to be found and declared by said board, said board may purchase necesasry equipment and appliances without advertising for bids."

From present indications it looks as if airport work would be quite a feature in the future construction picture, since cities are bestirring themselves to establish local landing fields, but on the face of the above law it would seem that Indiana architects are not destined to play much of a part in this branch of aviation development.

Is it any wonder they are concerned regarding this law which has bobbed up on the statute books having entirely escaped their notice when the legislative mill was grinding?

HOW ABOUT THIS?

There Are Some Years That Must Be Carried

A move sponsored by the Hearst Newspapers throughout the country and supported by different professional groups which has for its purpose a reduction of income tax for professional people, has caught the eye and attention and architects.

Recently the matter was taken up by the Michigan Society of Architects with the introduction of a resolution covering the subject.

Anent the matter the Bulletin of the Michigan Society had this to say:

"The appeal, which seems a reasonable one, is based on the fact that in a business one is allowed to charge off depreciation on an automobile or other similar equipment, while in a profession no allowance is made for depreciation of one's stock in trade—his training. As stated in the resolution, an Architect's years of good income are but few, and against these years must be charged his capital invested and the many years spent in training. Every job he does is so much nearer to the years of "lesser production," and every job must carry its own burden of depreciation."

Here is the resolution introduced:

"Whereas, there are hundreds of thousands of instances where earners of wages, fees or commissions often have but a few years of good incomes with substantially less incomes prior to and after their most productive years; and

Whereas, their period of better earnings which might give the average wage earner a chance to accumulate some capital is so heavily taxed; and

Whereas ,labor in general, lawyers, doctors, architects, clergymen, clerical workers, salesmen, dentists, engineers, journalists, accountants, actors, motion picture actors, singers, musicians and all other professional people, are in the same plight in the matter of earned income as distinguished from earnings on invested capital; therefore be it

Resolved, That the Michigan Society of Architects respectfully urge that the Congress of the United States give immediate consideration to a downward revision of all taxes on earned incomes such as wages, salaries, fees or commissions for personal service. Be it further

Resolved, That these resolutions be forwarded to the Congress of the United States, the Secretary of the Treasury and the local Hearst newspaper."

Copeland

DEPENDABLE ELECTRIC REFRIGERATION

There Are So Many Copelands To Choose From You'll Find Exactly What You Need

A small electric refrigerator or a large one; an inexpensive steel cabinet or a magnificent all-porcelain cabinet with optional colored top; self-contained mechanism or "remote" installation —whatever your requirements, Copeland can supply them.

There are three lines of Copeland dependable electric refrigerators for the home—low-priced, medium-priced and DeLuxe. Capacities range from 5 cu. ft. to 20 cu. ft.; ice cubes from 108 to 378, or 24.5 pounds of ice at one quick freezing.

And all Copeland models have double-depth dessert drawers, shelves at convenient height, no insanitary drain pipe, Coldtray for crisping salads, chilling foods or storing ice cubes.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY.

Structural Steel alone gives the service required in this mill of the Indiana Limestone Co., Bedford. Steel fabricated and erected by Bedford Foundry and Machine Co., Bedford, Ind.

STEEL—ALWAYS

Structural steel comes to a building site ready to go into place . . . ready for immediate action . . . ready to speed the building process with perfect adaptability and efficient fitness. Freezing . . . intense heat . . . rain cannot impair the strength of steel or hinder its erection. Here is the one building material that always can be depended upon to do its duty any time, anywhere.

Sealed Proposals

NOTICE TO CONTRACTORS

SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn County, Indiana, that it will on Wednesday, September 18th, 1929, at 10 o'clock a. m. at the North School Building in Aurora, Dearborn County, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Bldg., Indianapolis. Plans and specifications have been adopted and approved by the Building Company, and various boards of the State of Indiana, excepting the State Board of Accounts.

Plans and specifications are now on file in the office of the North School Building, in the office of the State Board of Accounts and in the office of the architects.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Harry S. Theurmer, president of the School Building Company, to be held by the Company as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts, will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required, he shall forfeit the amount of such check to the Building Company as liquidated damages.

Harry F. Shuermer,
President,

John E. Martin,
Vice-President,

Joseph R. Houston,
Secretary-Treasurer.

LEGAL ADVERTISING

For Building Construction

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

QUALITY CONSTRUCTION

(Concluded from Page 3)

the rule is a mystery. If it is only evaluated at one dollar from the individual viewpoint, it is worth millions to the construction industry. We can make our business so much simpler, our paths so much easier and our lives so much fuller if we cultivate the will to help and not to hinder. Every hour we spend protesting plans, blaspheming bonds and attending courts is time wasted away from the jobs.

America for Americans

"America for Americans is no longer a fable but a fact. Ten million citizens now own the stocks and bonds of big business and big buildings. Fifty-three billion savings depositors own twenty-eight billions. Millions of policy-holders through their insurance companies control billions of investments. Even a number of our largest national general constructors have recently sold stock to the public. Customer clients need not be limited to public utilities.

"Construction men ought to know more about construction financial programs than any lawyer or realtor, and yet they are omitted from the financial literature sent to the public. The most selfish thing we can do is to unselfishly discourage construction enterprises which are unduly speculative or unsound.

"Skill in construction is the only warrant for our existence as general contractors. If through exercising greater skill in construction we cannot render better and more quiet and efficient construction service than can be obtained otherwise, we have small reason for existence.

Eilmination of Waste

"Waste is measured in materials, men, miles and minutes. We have within the last ten years made some progress in its elimination. The door, however, is still wide open. As a nation we have been too intent on progress to measure its cost. Stock taking is at hand. Cost reduction for quality standards is the order of the day and must occupy our attention during the next ten years. Our association must actively and not indifferently continue cooperative efforts. We should lead and not merely be content to follow.

"A contractor's loss is not necessarily a community gain. It is stated that every generation of subways in New York City has its new group of contractor builders. The old subway contracting firms are gone not merely from subway building but from the contracting busines. The record is a sad commentary on that business. Criticism specifically of New York subway contracting is not implied. Its record of contractors' mortality only reflects that of the contracting business generally.

"Price cutting," according to Mr. Charles F. Abbott, executive director of the American Institute of Steel Construction, "is a subtly sinister influence. The public never seem to learn that it is impossible to buy something for nothing. People get 'stung' with one kind of 'cut' merchandise and they immediately turn around and make the same mistake with some other kind. In the final shake-down, it is the ultimate consumer who always loses by price cutting.' We live only by knowing something about the future, while the problems of life and business arise from the fact that we know so little.

"Another step in the campaign toward the elimination of waste and inefficiency has recently been announced by the Bureau of Foreign and Domestic Commerce of which Dr. Julius Klein is director. This bureau is to undertake a nation-wide credit survey beginning in Baltimore. Precise information about existing credit methods and other results is likely to induce many beneficial changes contributing towards lower living costs for consumers and a better balance for tradesmen.

"Labor is our friend in spite of implications to the contrary. Many of us here grew from the ranks. The roll call ten years hence will include increasing numbers who started at the bottom of the ladder. No one wants to keep good men down. Better education, vocational training and wider diffusion of knowledge will all help to speed the process.

"Whether the forty-hour week is timely, only the future can answer. Most of us here have seen the twelve-hour day and six-day week pass without the calamities we anticipated and predicted. If through mechanical production, increased skill of workers and reduction in waste, we can collectively construct all the structures America needs within the fewer hours, then it is worth trying.

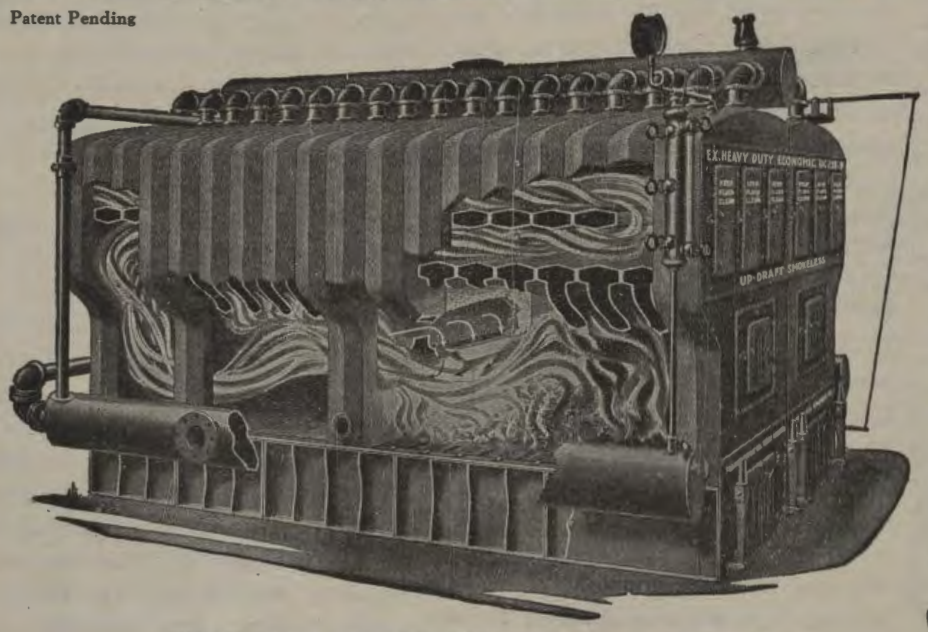
"Make jobs safer. It pays good dividends. It saves lives, labor overturn and insurance premiums. Study group life insurance and old age pensions. You and I may need them.

"Conventions are held that we may sit at the feet of leaders for guidance and breadth of vision. We can plod along at home alone. It's inspiration we need to make perspiration tolerable. Trade associations rise or fall in proportion as they enlighten their membership, by definite solutions rather than general statements, by acting instead of resolving, by guiding public opinion, not resisting it, and by rendering salable services."

SLIGHT IMPROVEMENT SHOWN BY BUILDING IN AUGUST

Volume for the Year at Indianapolis, However, Trails Last Year's Figures

Two styles of structural work, office buildings and residences, served to kite the new building construction volume at Indianapolis for August to make it the third best building month of the current year. The total estimated valuation of the new work for which permits were issued was $1,836,705. This was an increase of $462,180 over the figures recorder in July, a gain of 33.62%. However, the August total was 7% less than the total posted in June, the best building month of the year so far.



While the increased activity in August and the resultant total rolled up boosted the city's yearly volume considerably, nevertheless it failed to materially cut down the deficit to be found in a comparison of the 1929 and 1928 figures since the August total trailed that registered for August a year ago to the extent of $245,-087. The permits issued for the first eight months of 1928 and the total estitmated valuation of new work for the same period was 7,533, amounting to $16,168,542 as against 6,039 permits for $11,570,275 for the corresponding period in 1929. In other words, the current year is 1,494 permits behind last year while the estimated valuation on new work is $4,598,267 in arrears of the same item over the like period.

Miss Clara Oxley, statistician for the city building inspection department, has prepared these official figures showing an analysis of the new work passed upon:

Classification	Per.	Est. Val.
Accessory Buildings	152	$ 60,200
Business Buildings	18	865,785
Dwellings	127	643,400
Industrial Buildings	1	20,000
Miscellaneous	104	33,017
Public Buildings	1	35,000
Repairs and Alterations	387	179,303
Total	790	$1,836,705

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

The success or failure of a heating installation depends upon getting the right boiler. Next to efficiency, the matter of economy is an important point. PROX BOILERS are built for economical service and lasting satisfaction. They are so constructed that the maximum number of heat units are generated from every shovelful of coal consumed.

PROX HOT BLAST SMOKELESS BOILERS
Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood

Capacities—800 sq. ft. to 25,000 sq. ft. steam

INDIANA CONSTRUCTION RECORDER

FOR ARCHITECT ENGINEER

Devoted to the Interests of the Indiana Construction and Engineering Industry

FOR SUPPLYMAN CONTRACTOR

Vol. XI INDIANAPOLIS, INDIANA, SEPTEMBER 14, 1929 No. 25

GREAT INDUSTRY TO MEET TO SEEK TO SOLVE THE PROBLEMS MUTUAL TO ALL BUILDERS

Hoosier Building Construction Interests to Be Brought Together at Trade Show at Indianapolis

The Indiana Building Congress and Trade Show to be held in the Manufacturers Building, State Fair Grounds, October 21 to 26, inclusive, represents an industry that spends about seventy-five millions of dollars annually in this State.

The members of the constituent elements of the organization are the architects, the engineers, the building contractors, the sub contractors, the skilled craftsmen, and the material interests whose contribution to the creation of wealth inside the limits of the State of Indiana reach an annual grand total of seventy-five million dollars. Thus this industry is outranked only by agriculture in amount of wealth created or money spent.

The construction industry of the State is a part of the larger construction industry of the nation, which creates wealth at the rate of seven and a half billions of dollars annually. One purpose of the coming Convention and Trade Show is to help work out the solution to problems that, when solved, will permit the industry in Indiana to create a greater share of wealth in the national total to the benefit of the industry and to the general public.

Things that will permit better construction at a lower cost will be given prominent attention.

Exhibits will serve to reveal to contractors, architects, engineers, and to the general public how newly understood, scientific principles are used in a practical way to make better materials at a lower cost. By this means, for instance, contractors are now erecting big buildings of stronger and better materials than were known in bygone years.

Thus, through means of scientific research, the public may now have tall and stronger buildings erected at reasonable costs. The methods of obtaining these results, which may be applied very easily,

(Concluded on Page 21, Col. 1)

AUGUST BUILDING FOR STATE MAKES FAIR SHOWING

Behind Figures of a Year Ago But Compare Favorably with Current Year's Figures, July Excepted

Following the new building splurge of July construction work in Indiana during August settled back more to a normal level. The state figures for July received an abnormal boost when both East Chicago and Michigan City cut in with better than two million dollar totals for new work. The drop back in August was quite noticeable but not alarming since the volume was 10.33 per cent in excess of the June record. In fact, last month's activities were more of a natural and healthy trend.

Though Indianapolis cut no swath with her $1,836,705 volume, Evansville by bobbing up with $1,356,438 made up materially for losses recorded in other localities. In the matter of gain over the corresponding period a year ago Terre Haute stood to the fore with a 280 per cent increase. The only other cities to show advances over the August, 1928, business were Hammond with 49.86 per cent and Kokomo with 38.50 per cent. No comparative figures were submitted by Elkhart. The other ten cities of the fourteen reporting all showed losses from last year's business. They ranged in this order: Evansville, 8 per cent; Richmond, 11.4 per cent; Indianapolis, 11.77 per cent; Mishawaka, 22.13 per cent; Ft. Wayne, 27.7 per cent; East Chicago, 37.67 per cent; Michigan City, 38.8 per cent; Gary, 45.23 per cent; South Bend, 67.96 per cent; Muncie, 73.8 per cent. As a whole the state's new building construction work for which permits were issued in August ran 22.08 per cent behind the volume posted for the corresponding period a year ago.

The official figures sent in by the various city building commissioners and inspectors are herewith set forth.

City	Aug., 1929	Aug., 1928
East Chicago	$ 182,862	$ 293,375
Elkhart	221,852	-------
Evansville	1,356,438	1,475,575
Ft. Wayne	665,001	920,069
Gary	215,550	397,615
Hammond	537,150	359,200
Indianapolis	1,836,705	2,081,792
Kokomo	815,597	589,431
Michigan City	18,030	29,480
Mishawaka	80,184	102,980
Muncie	126,740	483,833
Richmond	67,520	76,215
South Bend	489,535	1,527.995
Terre Haute	130,840	37,059
Total	$6,744,004	*$8,370,619

*Total for thirteen cities only, figures for Elkhart for August, 1928, not available.

IT MAY OR MAY NOT BE SO

However, Even the Suspicion That Such Situations Exist Does Not Help the Building Business

Usually when a man cannot see or understand how it was that he did not get the job, he immediately looks around for a reason.

The sub-contractor knows that the price he made was as low as the job could be done for, and the general contractor to whom he sent his bid got the job—but has not informed the sub-contractor that the job is his.

In the natural course of events, the sub-contractor meets or calls up the general contractor and says that "Jones' job is mine alright, isn't it?" To which the general contractor replies, "No, I think not, you were not the lowest bidder."

"Why," the sub-contractor ventures to say, "I understood and was told that my bid was the lowest at the time the job was let, how is it that I don't get the work."

"Oh, well," replies the general contractor, "I don't remember whether that was so or not but my office man figured

AN ENGLISH EXPRESSION ON AMERICAN ARCHITECTURE

Refinement of Commonplace Things Has Developed to Fine Point

There are, perhaps, no new viewpoints presented in a discussion on American architecture which the London Times prints, but as an estimate accepted in a distant country, and one which has itself some of the noblest examples of architectural work, what it says is suggestive and gratifying.

It is a fallacy, it declares, to suppose that architecture consciously sets out to give an expression of the age in which it erects its triumphs. That architecture should express its age is, in fact, a necessity, is unavoidable, whether in Grecian simplicity or Victorian confusion. "The greatest eras have had foremost in view the need and function for which they were building. It was in the refinement of commonplace things, rather than in any conscious effort to produce 'art,' as we understand the term, that they produced great architecture."

With this principle deducted from the past as a basis for interpretation, much material for elaborating and fortifying the thesis is found in America's architecture. Our best architecture is not that in which the effort to attain novel effects in designing is too obvious. It is that which was developed under a pragmatic philosophy of construction.

The concentration of activities in our great cities, the enermous price of land, the demand for uniform, convenient housing for activities of kindred nature, created a problem of very precise, definite conditions. In a workaday endeavor to meet those conditions, without pretentious ambition to give expression to the spirit of their age, unconscious of any undue striving after art for art's sake alone, our best architects humbly sought the solutions that would best satisfy, within the lines that stern necessity laid down, and, lo! they woke to a realization that, without knowing it, a great marvel had come to pass under their hands. For what is an "expression of an age," but a response of earnestness and sincerity to the distinctive and urgent needs of that age?

As the Egyptians had to have tombs and the Romans amphitheaters and the middle ages cathedrals and Europe's renaissance palaces, so America, says the Times, had to have the great business buildings that typify its civilization today and, having also the prosperity that works miracles, the skyscraper thus came into being. No man who was conscious of doing a great thing while he was doing it, says Carlyle, ever did a really great thing, and these men did a great thing unaware.

To be sure, that blessed unconsciousness was not shared by all. Early skyscrapers have their "show off" features. Roofs of a peculiar shape that filled a need in old world architecture were thrust down incompatibly on skyscrapers in congested centers and heavy overshadowing cornices, adapted from the same models, were interpolated in plans for tall buildings whose handicap was a famine in light. But the writer says that no future business buildings will be erected with the ill-assorted columns of some of our old ones and that the Singer building in New York will have no successors in doomed skyscrapers.

The thesis of pragmatic development is carried most interestingly into the very latest phase of our city architecture. Zoning ordinances, which in turn, were an expression of very practical consideration arising out of the necessity for conserving light, air and space, created a new condition in a requirement for set-back construction. In complying with this practical new condition, our architects, it is asserted, have given us the most beautiful of all our skyscraper creations. The Radiator building of black brick and terra cotta with gold ornamentation in New York, the Penobscot and Fisher buildings in Detroit, the Tribune building in Chicago and the new Telephone building in St. Louis are cited as especially meritorious types.

The Woolworth building in New York is described as "Gothic," but it is declared to have contents even more important than its few Gothic lines. Structures almost devoid of ornament impress by their sheer mass and towering forms, it is affirmed.

The new telephone buildings erected in various parts of the country are, in fact, cited in special illustration of the needs that created, under compulsion, our familiar type of business structures. In them are "combined the housing for executive ,engineering and operating departments and huge staffs of other employes, necessitating an assembly hall, recreation rooms, library, educational facilities, restaurant, hospital, basement garages, the whole united by an elaborate system of telephones and elevators. Such a building has no forerunner, classic or medieval, and its design, therefore, abandons the more easily any affectation of the archaeological." (Bulletin of the Michigan Society of Architects.)

STEEL INSURES STRENGTH AND SECURITY

The Indianapolis Power and Light Company, one of the most progressive public utilities in the Middle West, realized the advantages of using Structural Steel in its heavy storage building. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

Build More Safely --- *With Steel*

ARCHITECTURALLY steel permits of innumerable forms. Economically it permits of great savings. To keep pace with the modern tempo, buildings must be constantly remodeled or rebuilt. Flexibility is melted into the soul of the material. Internal conditions which cause the depreciation of buildings depend largely on the strength, durability and elasticity of the construction materials. Steel is the material most suitable for the structural frames of buildings. Any part or the whole can be disassembled, removed and replaced, or rearranged, or reinforced without lessening the strength or durability of the structure.

KOEHRING
DANDIE

Fit a Dandie to Your Job!

HERE'S the Dandie 7-S, for example—a one bagger with liberal room for mixing action!

Equip it with the fast charging skip, roomy enough and right-shaped to chute materials into drum in a swift, clean slide. No clogging!

—or fit it with roomy low charging hopper and the strong sturdy platform that hinges up against drum in moving from job to job!

Give it the Koehring automatic water measuring tank, and batchmeter to time mixing period and you're equipped to meet strict specifications and quality tests!

However you equip your Dandie, you'll get fast charging and fast discharging! You get the long-service reliability of superior construction, the easy portability and handiness of practical design!

Study the Dandie transmission—that in itself tells a wonderful story of service-life!

The more you know the Dandie — the more you'll recognize it as the *outstanding value in its class!*

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Dandie Mixers: 5-S, 7-S, 10-S

5-S single or four cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

Sealed Proposals

NOTICE TO CONTRACTORS

SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn County, Indiana, that it will on Wednesday, September 18th, 1929, at 10 o'clock a. m. at the North School Building in Aurora, Dearborn County, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects, Connersville, Indiana, and their mechanical engineer, Mr. Walter Breining, 907 Roosevelt Bldg., Indianapolis. Plans and specifications have been adopted and approved by the Building Company, and various boards of the State of Indiana, excepting the State Board of Accounts.

Plans and specifications are now on file in the office of the North School Building, in the office of the State Board of Accounts and in the office of the architects.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bid; checks made payable to Harry S. Theurmer, president of the School Building Company, to be held by the Company as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts, will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required, he shall forfeit the amount of such check to the Building Company as liquidated damages.

Harry F. Shuermer,
President,
John E. Martin,
Vice-President,
Joseph R. Houston,
Secretary-Treasurer.

LEGAL ADVERTISING

For Building Construction

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

GREAT INDUSTRY TO MEET

(Concluded from Page 3)

will be explained in detail by specialists sent to the Congress and Trade Show. These features alone will more than repay for the time and expense required for attendance at the Congress and Trade Show.

Few people realize the importance of the construction industry in their daily lives. The troubles of the farmer, the doings of the automobile world, the news of the railroads, are all thoroughly discussed in the press and are usually good for feature heads on the front page while the great construction industry is seldom heard of unless a building burns or falls, or some point involving public work arises in dispute. Yet construction is as much a part of our daily lives as any industrial activity. The necessities of life are food, clothing, transportation, and shelter. Construction creates wealth in the direct supply of shelter, in part, supplying the need for transportation, and also has its essential part in the making possible all industry. By virtue of its creation of wealth it increases the very fortunes of every person in the commonwealth. Since it bears such basic relationship to our daily lives by furnishing shelter, and since it creates wealth in a rate second only to that of agriculture, developments in the construction industry that made for better conditions, increased business, and a more rapid but basically served creation of wealth by the industry are of great immediate interest to the public.

Everyone should attend the Indiana Building Congress and Trade Show next October that he may acquaint himself with the progress that has been made to assure better buildings.

IT MAY OR MAY NOT BE SO

(Concluded from Page 3)

up the total bids and I know that you were not the lowest." And that's that.

Now then, the sub-contractor is disgruntled and dissatisfied and thinks he knows why, but has no evidence to prove his contention so he is sore and everything is wrong with him.

The general contractor questions his man about it and the man says, "Well, you see it's this way. This fellow was the lowest bidder when the bids were opened but sub-contractor Number 2 came down here right after the bids were opened and said that he did not have time to get his bid in and submitted his bid which was $50.00 less than the other fellow so I put his bid in our list—that makes us $50.00 ahead to start with."

"Oh, I see," said the general contractor, "but I don't like that kind of business. It doesn't look right to me and I don't countenance that sort of thing."

"Oh, well," replies his man, "the fifty dollars is just as good to you as it is to anybody else. Besides, you know we left out about fifty dollars worth of fancy work in that hall which we admitted we had included in our bid, so that will even up things."

"Well," the general contractor responded, "I don't like that way of doing business just the same."

"Well then—" replied the office man, "why do these sub-contractors call you up or run around after you and beg you to let them put in a bid after the bids are open. Why don't they clean house themselves?"

The sub-contractor at times thinks that the owner peddles his bids, claiming that if he is not to have the job, if he is the lowest when the bids are opened, that the owner should not ask him to figure the job if he (the owner) does not intend to give the work to him.

Just how much truth and fact are in all this supposition is problematical, but from the talk one hears bandied around it would seem there are times when just such "goings on" do occur, else, why all the agitation against bid-peddling? If it is but a suspicion it hurts the business for it causes men to become disgruntled, keeps things stirred up, injures morale and should be silenced.

RUNNING AHEAD OF 1928 FIGURES

Construction Work at Fort Wayne Making a Good Showing

Building construction work at Fort Wayne during the month of August showed the best activity of the summer season. There were more permits issued than during any other one month of the current year. As for the estimated valuation of the new work started it ran up to $665,070 a gain of 80.8 over the July figures.

The August volume, however, is below August of last year when 162 permits were issued for a total of $919,869. However, the greatly increased number of permits issued this year indicates more widespread building activity than last year.

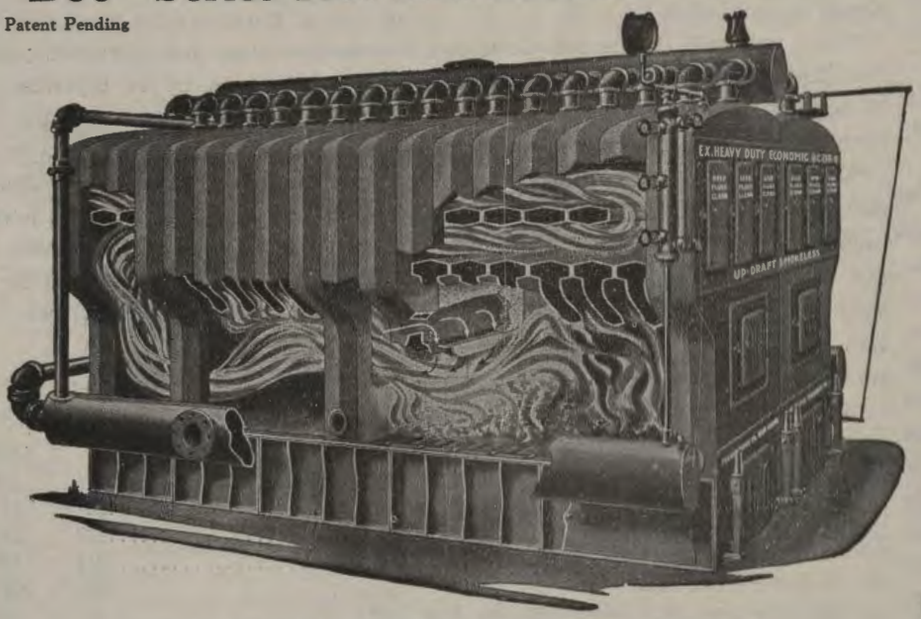
Even though the August volume of business did fall behind that recorded for the corresponding period a year ago the decline registered was not enough to pull the current year's total down to the level of that of the first eight months of 1928. As matters stand now 133 more permits have been issued up to September 1st this year than were issued over the same period a year ago and the total volume of new work passed upon since January 1st this year is 10.25 per cent in advance of that for the same period in 1928.

Month by month comparisons for the years 1928 and 1929 are as follows:

1929	No. of Permits	Volume
January	64	$205,025
February	71	156,792
March	181	351,416
April	184	391,229
May	211	792,335
June	152	3331,349
July	155	405,221
August	162	919,869
Total	1180	$3,553,236

1929		
January	29	36,430
February	68	168,230
March	196	600,912
April	206	888,792
May	216	670,400
June	200	519,798
July	168	367,730
August	230	665,070

NEED A DOCTOR?



Sometimes We Do Even When We Think We Are All Right

Having the faculty of being able to figure a job is no guarantee that a price is correct. Checking up on figures is a good thing and oftimes proves profitable. Quantity survey by experts in that line help contractors make reasonably accurate figures and assures them that should they get a job the only question for them to gamble on is the breaks they get in the construction of the work.

We have witnessed many losses on work where the contractor has left out of his estimate important cost items which left him in the hole unless he was fortunate enough to be favored with a bunch of extras. The best of us are sometimes too cock-sure we are right. A good doctor in any line will help remedy bad conditions and make for better results from both practical and mental inequalities.

Vol. XI INDIANAPOLIS, INDIANA, SEPTEMBER 21, 1929 No. 26

TOWNSHIP TRUSTEE MADE A PARTY TO A SUIT IN U. S. DISTRICT COURT

Infringement of Patent Alleged, Damages and Permanent Injunction Asked

A bill of complaint that is of interest to Indiana builders and public officials was filed this week in the United States District Court at Indianapolis against a township, the township trustee, and a heating contractor, Wilkinson, Indiana, of patent, damages and seeking a permanent injunction against the defendants from further infringement of said patent.

The complaint was filed by C. C. Shipp, Indianapolis, against Jacob J. Barnhart, heating contractor, Wilkinson, Indiana, Anderson School Township, Madison county, Indiana, and Albert P. Jones, Anderson, Indiana, trustee of said township alleging the use of heating appliances, that infringed on C. C. Shipp's patents, in a new school building.

Bill of Complaint

The contents of the papers filed read as follows: To the Honorable Judges of the District Court of the United States for the Southern District of Indiana: The plaintiff avers as follows:

1. The plaintiff is a citizen of the United States and a resident of Indianapolis, Marion county, Indiana. The defendant Jacob J. Barnhart, is a citizen of the United States, and a resident of Wilkinson, Hancock county, Indiana, having his principal place of business as a heating contractor at said Wilkinson. The defendant Anderson School Township, of Madison county, Indiana, owns and operates the Lindenberg Anderson township school, near Anderson, Madison county, Indiana, where the defendants have jointly and severally committed the acts of infringement hereinafter set forth. The duly elected and qualified trustee of the Anderson School Township is Albert P. Jones, whose residence is Anderson, Indiana.

2. This court has jurisdiction in the premises because the case arises under the patent laws of the United States.

3. Prior to the 28th day of August, 1926, Clarence C. Shipp, of Indianapolis, Indiana, invented certain new and useful improvements in radiator box bases, which improvements are set forth in the specification forming a part of certain letters patent of the United States, hereinafter more particularly specified; said improvements were not known or used by others in this country before his invention thereof and were not patented or described in any printed publication in this or any foreign country before his invention thereof or more than two years prior to his application for said letters patent, and were not in public use or on sale in this country for more than two years prior to his said application, and were not patented or caused to be patented by him or his legal representative or assigns in any foreign country upon an application filed more than twelve months prior to the filing of his said application in this county, and were not abandoned by him.

4. Being so entitled in the premises, the said Clarence C. Shipp made application to the Commissioner of Patents for the grant of letters patent of the United States for said invention, and thereafter letters patent of the United States No. 1711814, dated May 7, 1929, were duly granted, issued and delivered to said Clarence C. Shipp, who now owns the undivided right, title and interest therein.

5. That at the date of the issue of the said letters patent, the plaintiff was, and now is, engaged in the manufacture and sale of radiator box bases, corresponding in all essential particulars, to the radiator box bases shown, described and claimed in the said Letters Patent No. 1711814, under the name and style of C. C. Shipp & Company, and has introduced such radiator box bases largely in practical use in the United States and has made and sold such radiator box bases in large numbers from which he has derived large profits in his business.

6. Since the 7th day of May, 1929, and prior to the filing of this bill, the defendants, jointly and severally, have made, sold and used at Lindenberg Anderson School Township school, near Anderson, Madison county, Indiana, and elsewhere in the United States, radiator box bases embodying the improvements patented in said letters patent.

The defendants were jointly and severally, given due and timely notice, by marking every radiator box base made by plaintiff since the issue of the patent, with the notice "Patented" and with the patent number as required by law, and also, by personal notice in writing, that the aforesaid acts constituted infringement of the said letters patent; and written demands for an accounting for damages and profits for said infringements, jointly and severally, were made by plaintiff before the filing of this bill, but, notwithstanding said notices and demands, the defendants have continued, and are now continuing their said infringing acts, without license from the plaintiff, and they have failed to account for damages and profits now due to the plaintiff.

7. The plaintiff has suffered great damage and injury by reason of the aforesaid infringements by the defendants, and, unless the defendants be enjoined and restrained from further infringement, the plaintiff will suffer irreparable injury by reason thereof.

Therefore, the plaintiff prays:

First: That preliminary and perpetual injunction be ordered, restraining the defendants, and each and all of them from further infringement of said letters patent.

Second. That the defendants, and each and all of them, be ordered to account for and pay over to the plaintiff the profits which the defendants have made by reason of said infringements.

Third. That the defendants, and each and all of them, be ordered to pay over to the plaintiff the damages which the plaintiff has suffered by reason of such infringement.

ATTENTION OF INDIANA ARCHITECTS DIRECTED TO THE NEW STATE REGISTRATION

Same to Go Into Active Operation October First

The seventy-sixth general assembly enacted the law providing for the regulation of the practice of architecture as a profession, which law is known as the "Indiana Architectural Act."

Be it enacted by the general assembly of the state of Indiana, that from and after the first day of September, 1929, it shall be unlawful for any person to practice architecture, or to advertise, or put out, circulate or display any sign, card or other device which might indicate to the public that he is entitled to practice as an architect in this state, unless and until such person shall have been duly registered and granted a certificate, as hereinafter provided in this act.

The sole purpose of the act is, "to safeguard life, health and property."

In harmony with this purpose, the board will endeavor to so administer the law that those who are qualified for registration in accordance with the requirements of the act may acquire registration with the greatest facility possible, with due regard of the obligations and responsibilities the applicant is taking upon himself, to the public.

Applications For Registration Mailed Out

The board has mailed application blanks to all members of the profession who are listed as practicing architecture, however, if there is any person who should be registered that has not received an application blank please write the board. These application blanks are quite self-explanatory, and when properly filled out and accompanied with the required registration fee will be given careful consideration by the board.

The practice of architecture by any person or the advertising or putting out of any sign or card or other device which might indicate to the public that he is entitled to practice as an architect, without a certificate of registration as a registered architect issued by the board constitutes a misdemeanor punishable upon conviction by a fine of not less than twenty-five dollars nor more than two hundred dollars for each offense, and each day's violation thereof shall constitute a separate and distinct offense.

Time for Putting Into Effect Extended

Owing to the physical inability of the board to arrange and prepare completely all rules and regulations providing for registration by September 1st, as provided for by law, the members of the board have extended the time to apply for registration to October 1st, and will not prosecute or entertain any prosecution move for failure to comply with the law until after the later date, although certificates probably will not be issued until some time in October or November, the filing of applications for registration prior to October 1st, will comply with the ruling of the board, and protect the applicant under the provisions of the act.

There are four methods whereby a person may file applications for registration as an architect:

Form A, Sec. 9. Junior Classifications. Application for registration under this form are for those who have had less than ten years proved architectural practice as a principal in the practice of architecture as a profession. The examination of applicants applying under this form shall consist of written and drafting tests supplemented by a verbal examination, at the discretion of the board and shall embrace the following subjects:

(a) The planning, specifying, designing and construction of buildings.

(b) The strength of building materials.

(c) The principles of sanitation and ventilation as applied to buildings.

(d) The ability of the applicant to make practical application of his knowledge in the ordinary professional work of an architect and in his duties as a supervisor of mechanical work on buildings. Examination of applicants applying under this form will be held at such time and place as the board may determine at which time all applicants will be notified by the board to appear for examination.

Form B, Sec. 9. Senior Classifications. Application for registration under this form are for those who have had ten or more years proved architectural practice as a principal in the practice of architecture as a profession. The examination of applicants applying under this form, shall be, by exhibits of preliminary studies, general drawings, specifications and detail drawings, prepared under the personal supervision of the applicant; by photographs of executed work and evidence of authorship, supplemented by a verbal quiz as to the reasons for the method used and procedure shown and by proof of honorable practice, or by any or all of these which in the judgment of the board are necessary to determine the applicant's qualifications as an architect. Examination of applicants applying under this form will be held at the regular meetings of the board or a special meeting called for that purpose, at which time

(Continued on Page 1, Col. 1)

and bas., 36x48, Cumberland, Indiana. Privvate plans. Owner, John Klein, Cumberland. General contract awarded to Henry Bade, 1937 Prospect street, Indianapolis. Brick venee over frame, asphalt shingle roof, hot water heater, tile bath room, hardwood floors, gum interior trim, wood sash, wood lath.

***School Building** (new steam heating plant): Stockwell, Indiana, Tippecanoe county, Lauramie township. Archt., Rodney Leonard, 1304 New City Trust Bldg., Indianapolis. Owner, Dr. A. L. Peterson, trustee, Clarks Hill. Contract awarded to Orth Plumbing Company, 509 Columbia street, Lafayette. Will consist of split system steam heat, direct and blast for the present school building.

STEEL INSURES STRENGTH AND SECURITY

Build with STEEL

Structural steel is the one building material whose strength and absolute dependability is positively known. Great shops such as the one pictured above are in reality gigantic laboratories in which every step in Steel's manufacture is analyzed, checked and re-checked by skilled engineers and chemists. Under their supervision the girders, trusses and other units are fabricated, and every finished form is zealously inspected for dimensions, surface finish, tightness of rivets, etc.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

he Known Quantity

Small wonder, therefore, that business men of today want their buildings framed with steel. The superior strength, durability, elasticity and adaptability of steel and its dependable uniformity of chemical composition and physical properties, is universally acknowledged. The structural frames of steel for fire-resistive buildings are expeditiously erected in all kinds of weather without damage from freezing or other climatic action; are rapidly, and with reasonable cost, adapted to any required structural changes; are quickly and inexpensively demolished, yielding a valuable and readily marketable salvage.

struction, composition built-up roof, steam heat, plumbing, electrical wiring, steel sash, wood and terrazzo floors, steel stairs. Will include municipal offices, fire station and municipal light offices.

RICHMOND

Grade School (addition): $12,000.00, 1-sty., top addition, Guilford, Indiana, Dearborn county. Archt., Werking, Werking and Fallon, American Trust Bldg., Richmond. Owner, George C. Cole, county superintendent, court house, Lawrenceburg. Architect selected, plans in progress, probably will mature about January 1st. Brick.

SOUTH BEND

Contracts Awarded

***Orphans Home** (addition to boys' dormitory): 2-stys. and bas., 42x60, 1411 Lincolnway, west, Mishawaka. Archt., Austin and Shambleau, 111 North Lafayette street, South Bend. Owner, Orphans Home, 1411 Lincolnway, west, Mishawaka. General contract awarded to H. G. Christman and Company, 306 South Notre Dame avenue, South Bend. Brick, hollow tile backup, stone trim, structural steel, steam heat, composition built-up roof, terrazzo and rubber tile floors.

Residence and Garage: $20,000.00, 2-stys. and bas., 30x50, Twyckenham addition, South Bend. Private plans. Owner, Al Langbrake, 2405 Erskine avenue. General contract awarded to Paul Lieder, 205 Sherland Bldg., South Bend. Brick veneer over frame, slate roof, steam heat, tile bath, oak floors, steel sash.

Locomotive House: $15,000.00, 1-sty., 40x50, Main street, South Bend. Private plans. Owner, Indiana and Michigan Electric Company, 20 West Colfax street, South Bend. General contract awarded to Ralph Sollitt and Sons, 518 East Sample street, South Bend. Brick, structural steel, steel sash.

***Residence and Garage:** 2-stys. and bas., 30x32, 1602 Leer street, South Bend. Archt., W. W. Schneider, 234 Christman Bldg., South Bend. Owner, David Smith, 1602 Leer street. General contract awarded to Floyd Wedel, 1715 Kline stret, South Bend. Brick veneer over frame, asphalt shingle roof, wood sash, warm air heating plant.

Store Building (alterations): 3-stys. and bas., 107 South Michigan street, South Bend. Archt., Freyermuth and Maurer, 107 Lincolnway, east, South Bend. Owner. Max Adler, 107 South Michigan street. General contract awarded to Ralph Sollitt and Sons, 518 East Sample stret, South Bend. Work consists of new store fixtures, new footings, columns, walls, new stairs, interior alterations, remodeling the present steam heating, plumbing and electrical wiring.

Store Building (alterations): $5,000.00, 3-stys. and bas., 114 North Michigan street, South Bend. Private plans. Owner, S. C. Stratigos, 713 East Jefferson street. General contract awarded to A. R. Abrams, 214 Sherland Bldg., South Bend. Work consists of new copper set front, plate glass, general interior alterations, remodeling the plumbing, heating and electrical wiring. Plumbing and heating awarded to LaFortune and Shoemaker, 136 North Main street.

TOPEKA

***Grade School Building:** $75,000.00, 2-stys, and bas., 120x150, Topeka, Indiana, LaGrange county, Eden township. Archt., C. C. Ellwood, 210 Capitol Theater Bldg., Kalamazoo, Mich. Owner, Ora Cole, trustee, Topeka. Low bidder on general contract, T. E. Peck, Topeka. Brick, stone trim, hollow tile, structural steel, reinforced concrete, composition built-up roof, steam heat, plumbing ,electrical wiring. Will include six classrooms, and a gymnasium auditorium.

WARSAW

Public Garage and Apartment Building: $15,000.00, 2-stys. and bas., 60x80, 113 East Main street, Warsaw. Archt., D. H. Lessig, Indiana Loan and Trust Bldg., Warsaw. Owner, Donald Ross, 316 East Market street, Warsaw. Plans completed; probably will mature soon. Brick, stone trim, composition built-up roof, steam heat, plumbing, electrical wiring.

BUILDING HEIGHT LIMITS AT CHICAGO WIPED OFF THE SLATE

Former Ordinance Amended to Remove Height Restrictions

Chicago and Illinois architects are up in arms as a result of an ordinance put through the Chicago city council which practically eliminates all height restrictions for skyscrapers in certain sections of the city.

For years the city had set 264 feet as the limit for downtown buildings before invoking set-backs or towers. The new law permits buildings to rise 440 feet before floor areas are limited by set-backs or towers. This 440-foot limit is permitted on ground adjoining 100-foot streets, public parks, playgrounds and rivers. It includes practically the whole length of Michigan boulevard, Wacker drive, Lake Shore drive and other important streets.

After the 440-foot limit for building over the total ground area, towers can rise atop the structure to any height the promoter deems profitable, as long as the tower base is only one-fourth the total ground area.

The record of the city council does not show who proposed the amendment, and the city did not know it had become law until the Illinois Society of Architects and the Chicago chapter of the American Society of Architects protested when the first building permit was taken out under the new regulation. The architects declared that the amended code would foster the construction of a "veritable Chinese wall" of towering buildings on the favored ground that would eclipse all buildings erected under the old height limit, increase congestion and deprive modern structures of light and air.

Apparent beneficiaries of the amendment is a syndicate headed by the powerful Samuel Insull, utilities magnate, which has assembled a site of land at Randolph street and Michigan avenue where, presumably, a structure of heroic proportions, plans of which as yet have not been announced will rise.

A GENERAL SLOWING DOWN OF BUILDING CONSTRUCTION THROUGHOUT COUNTRY INDICATED

Figures on New Work from All Sections Show That There Is a Universal Easing Up of Activity

Unmistakable signs of a slowing down in building construction were in evidence in the reports submitted to S. W. Straus & Co., building financiers, New York City, of plans filed or permits issued in 577 comparable principal cities and towns in the United States. The completeness of this survey, covering every state, may be taken as a barometer in the building industry for the next sixty to ninety days. These 577 cities doing a volume of $256,720,837 in construction in August showed a loss of 18 per cent from August a year ago and 11 per cent from July of this year. The volume for these cities in August last year was $314,551,218 and for July, 1929, the volume in these cities was $287,497,821.

For the fourth consecutive month the survey showed losses in building volume for the more than 500 cities covered in its reports. The loss over the same month a year ago was for July, 13 per cent; for June, 29 per cent; and for May, 19 per cent.

Twenty-five Leading Cities

Building in the twenty-five principal building centers in the United States showed a loss of 20 per cent as against August last year and a loss of 27 per cent as against August, 1927, as well as a 10 per cent loss against July this year. The record of the leading cities bears out the trend shown in the country generally.

Though the volume of new building work registered at Indianapolis in August was below that of the corresponding period a year ago it, nevertheless was of sufficient size to allow the Hoosier capital to slip in among the twenty-five cities of the country turning in the best building records for the month. Also, Indiana nosed into eleventh place among the first twelve states recording the best building performances for last month.

Building Materials

Indices of building material prices recorded a decline in August due primarily to the weakness in the cement situation and to a lesser extent to declines in brick and hollow tile prices. The outstanding event was the cut of from 10 cents to 30 cents per barrel at a number of the cement mills; this cut was passed on to dealers and contractors throughout the country. Lumber prices have been maintained by curtailment in production; fluctuations in prices have been local and on specific items rather than general. In spite of the decline in building permits, the type of construction has been such as not to affect the demands for structural steel and prices have remained rather steady.

Labor Conditions

Organized labor in the building industry seems to be swinging to the five-day or the forty-hour work week. As a result of a national survey it has been found that approximately 25 per cent of the building merchanics of the country are now on this shorter week schedule. The backbone of this movement is found in the metropolitan district of New York, where 150,000 workers are on the five-day week basis. It is estimated that more than 300 cities and towns in this country now have the five-day week in one trade or more. Among important cities adopting this trade are: New York Chicago, St. Louis, Pittsburg, Spokane, Springfield, Mass., Cleveland, Philadelphia, Providence, R. I., Hammond, Ind., Harrisburg, Pa., Denver, Dayton, Elizabeth, N. J., Cincinnati, Dallas, Atlantic City, Louisville, Boston, Birmingham, Toronto, Can., Utica, N. Y., Wilmington, Del., Bridgeport, Conn., Buffalo, Butte, Evansville, Ind., Gary, Ind., Rock Island, Ill., Pasadena, Calif., Lynn, Mass., Seattle, Wash., and Scranton, Pa.

Representatives of building workers contend that the five-day week will aid in taking up the slackness in the unemployment situation, but this position is opposed by many builders who hold that on large projects as many craftsmen are used as can be economically employed.

NEEDS CREDIT STRUCTURE

Business of Building Has Been Run on Too Loose a Basis

General Manager D. A. Garber of the Associated General Contractors of America says "in the history of trade associations, probably no activity ever inaugurated has received such universal support from responsible elements of other industries as the A. G. C. campaign against reckless credit extension. It is commonly viewed dustry's protracted joy ride through overdustry's protacted joy ride through overextension and production.

It is widely believed that the construction industry cannot progress to any degree of stability or hold its prices above cost of production, unless it is given some reasonable credit structure."

ATTENTION OF INDIANA ARCHITECTS

(Concluded from Page 7)

all applicants will be notified by the board to appear for examination.

Form C, Sec. 12. Application for registration without examination. Application for registration under this form shall apply to any architect who shall submit evidence under oath satisfactory to the board that he is of good character, has been a resident of the state of Indiana for at least one year immediately preceding the date of his application, and was practicing architecture at the time that this act became effective (May 21, 1929.) After this act shall have been in effect one year the board shall issue certificates of registration only as provided in section 7-8-9 and 10 thereof. Applicants should bear in mind that registration under the exemption provisions of section 12 will not carry reciprocal registration privileges with other states and provinces requiring registration of architects, that these privileges can only be obtained through submitting to and passing an examination for full qualification which meet the minimum requirements of other states, such as provided under either form A or B, section 9 of this act.

Section 8. Reciprocal Registration. Application for registration under Sec. 8 shall apply to any architect, registered or licensed under the laws of another state or territory of the United States, or of a foreign country or province, who may, without examination be granted a certificate of registration as an architect by the board, if in its discretion, upon the following conditions:

(a) That the applicant is at least twenty-one years of age, of good moral character and of temperate habits; and

(b) That the requirements of the registration or licensing of architects in the particular state, territory, country or province were, at the date of license, substantially equal to the requirements then in force in this state either through their own state board of registration or through the National Council Architectural Registration Boards. If applicant resides in another state and is not registered in that state and not registered in any other state he shall apply on form A or B. Section 9 for examination in junior or senior classifications according to his qualifications. If applicant resides in this state and is registered in some other state by examination he shall apply on form A or B, Section 9, either in junior or senior classifications, and shall apply to the board in the state of which he is registered for a transcript of his application together with a certification by the board as to its authoriship. This transcript and certification to be filed with his application as a part of such application. This method will insure the applicant of full qualifications to practice as an architect in this state without having to pass an examination.

The board kindly requests the architectural profession to give the matter of registration their prompt attention and help facilitate the work of the board.

FT. WAYNE ENGINEER MAKES OFFICE CHANGE

Moves to New Business Location

R. W. Noland, M. E., Ft. Wayne, well known consulting engineer of northern Indiana, announces the removal of his office from the Utility building to 408 Cal-Wayne building. This transfer was necessitated by the taking over of the Utility building for office space, by the Northern Indiana Public Service company. Mr. Nolan has a fine suite of offices in his new location and will be pleased to have his friends and the trade call at any time.

DEVISE MEANS TO IMPROVE PLUMBING IN SKYSCRAPERS

Department of Commerce Gives Result of Survey

Important additions to the plumbing code, with particular reference to the plumbing problems of "skyscraper" construction, have been suggested by the plumbing committee of the Department of Commerce as the result of a recent survey of the plumbing requirements of buildings ranging from 10 to 40 stories, the department announced recently. The full text of the statement follows:

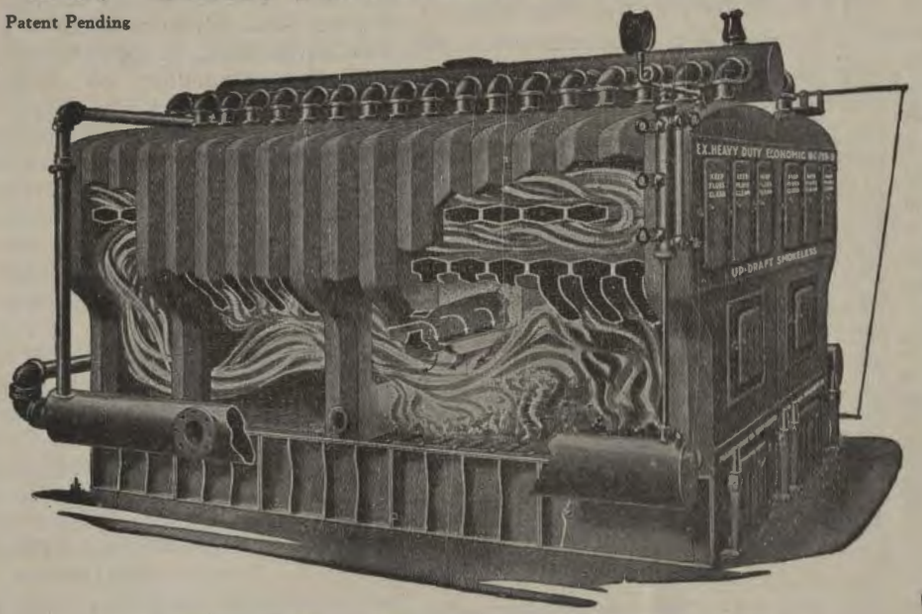
"One of the outstanding problems involved in the construction of the modern skyscraper—that of adequate and sanitary plumbing—bids fair to be solved as a result of investigations of the Department of Commerce's Committee on plumbing, working in conjunction with government scientists. The analysis of plumbing in high buildings is supplementary to a study made several years ago in connection with installations in dwellings and small buildings.

"In a report which has just been released such questions are discussed as the size of pipe to be used, kind of venting, most efficient and sanitary types of traps, etc. The conclusions arrived at, it is pointed out, are based on tests made by experts of the Bureau of Standards and experience with actual plumbing installations. Buildings from ten stories to forty stories above the ground present many plumbing problems not found in smaller structures. For this reason, the committee overhauled its earlier report, strengthened it where the need was disclosed, and added tables and rules suitable for the design of high plumbing systems.

"The committee states that although its present recommendations are a step forward toward more logical and economical requirements and are believed to be the best that can be offered in the present state of knowledge, much experimental work remains to be done before all phases of the subject will be thoroughly understood. It urges the continuation of experimental work in the belief that the public will benefit greatly from it.

"Copies of the complete report which is entitled 'Minimum Requirements for Plumbing' may be obtained for 35 cents from the Superintendent of Documents, Washington, D. C.

HOW ABOUT MODERN HOMES A LIKE PERIOD HENCE



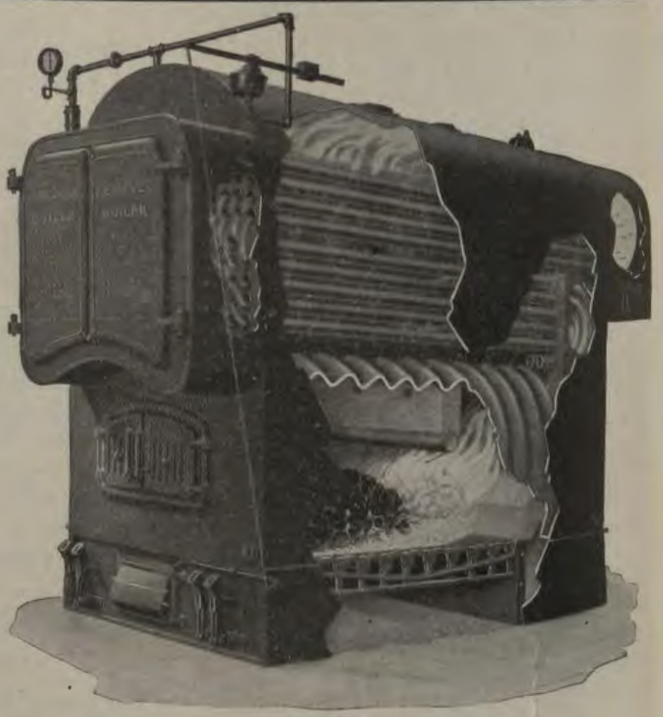
Pioneers Apparently Knew a Thing or Two About Building

Built in 1776 and still in use, the home of James George Alexander Turner, of York county, South Carolina, stands as a monument to the sturdy construction methods of pioneer days. The builder was Robert Turner, great-grandfather of the present owner, who obtained the grant of land on which the house stands from King George III.

The original floors of the house still are in good condition, despite their 153 years of service, and the doors, too, that stand today are the ones that first swung in the new house. The hinges and hasps, together with the nails in the floor and elsewhere, were made by the pioneer builder in his blacksmith shop.

"B60" Series Hot Blast Smokeless Boiler

Patent Pending



Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

THE SKYSCRAPER OFFERS THE OPPORTUNITY FOR GREATER RETURNS FROM A GIVEN AREA

Great Towering Structures of Today, Purely an American Architectural Development, Evolved on the Principle of Good Business

Skyscrapers are no longer limited to large cities, but are gradually being introduced into smaller communities. Where but a few years ago a two or three story building stood, today towers a ten or twelve story structure, and building codes are constantly being changed to accommodate the new demands. More information on the skyscraper subject is not amiss, and the following article taken from The Index and reprinted in the Michigan Contractor and Builder discusses the situation in an interesting manner.

"The building of skyscrapers is today becoming a highly specialized industry dealing with a commodity which is projected, produced and sold much like any other product in a competitive market. This is particularly true of apartment houses; office buildings are still frequently built by a company which intends to occupy a large part of the space. Many skyscrapers, however, are conceived by a promoter —usually either a construction company or a real estate firm—who completes the structure on schedule, sells it at a profit and turns immediately to the site, financing, erection, and sale of another and probably more elaborate structure.

"The skyscraper is a peculiarly American contribution to architecture, probably the most distinctly American creation in the world. It is a product of the past half century. While New York is the world's skyscraper capital, there is scarcely a city of any size in the country that does not have at least one or two buildings of skyscraper proportions. In New York the skyscraper has become necessary because of the small size of Manhattan Island and the desirability of certain districts for business purposes or for apartment houses.

"Buildings, such as the Metropolitan Life and the New York Life, and other bank and insurance buildings have been erected mainly to house the staffs of the principal tenants. The branch banking and the present trend of commerce and finance to assume international growth in the insurance business, have necessitated large central offices for the administration of these affairs.

"The same development, but to an even larger extent, has taken place in the construction of apartment houses. The desire to live in the city near one's business has been an important factor in the construction of the vast buildings housing many families which are now a feature of American city life. The general prosperity which the country has exprienced since the war has brought about a demand for luxurious homes in selected districts and the only way to house these numerous applicants was to establish a sufficient number of dwellings in skyscrapers. Erection of these buildings is an important factor in the skyscraper industry.

"Some of the larger building companies are emphasizing the importance of a 'limit of cost' contract under which the builder agrees to deliver to the owner the structure erected to specifications and within a certain limit of cost. A varying percentage of the saving is returned to the owner. Especially important in this connection is a system of scheduling which has been worked out by several of the companies. Their experience has shown that operations go forward by certain definite steps. Before work on a building is begun, a 'time table' for the building is prepared. Each step is scheduled, materials delivered, work begun and finished at a specified time. The importance of such a schedule is obvious, for the loss of a few days' rental or the additional interest on idle money amounts to a considerable sum on a tall building. Moreover, building companies are often able, because of the efficiency in their operations, to deliver a building to the owner before the day scheduled. This naturally brings the building more quickly into production and profitable operation for the owner. Construction must be carried out in accordance with building regulations which are ordained to make it practically impossible to erect a building that is unsafe.

"Past experience has shown that modern office buildings have a life of only about 35 years and that their depreciation is roughly 3.2 per cent a year. This is not due to any structural fault, but to changing public taste, to improvements in conveniences, such as elevators, and to increasing land values which necessitate larger and better buildings which will give a greater financial return.

"Structurally, a skyscraper should last for centuries, but America builds to serve a purpose, and when a building ceases to serve that purpose in a competitive way, it is razed and replaced, however beautiful or historic it may be.

"There are two aspects to a skyscraper as a paying proposition. A building may pay a good return on the investment, but may occupy too valuable a site, which will warrant the demolition of the old structure and the erection of a taller and more modern building. Wall street and Broad Street today illustrate very well this tendency. Already lined with fairly tall structures, these streets are now being rebuilt to house the expanding financial community. On the other hand, there is an economic limit to the height of a skyscraper. For the present at least this limit is set at about 60 stories.

"It has been pointed out by Louis J. Horowitz, chairman of the board of Thompson-Starrett, Inc., constructor of some of the tallest and largest office buildings, that there is no physical difficulty in the way of 100-story buildings, but from an economic standpoint the upper floors are losing propositions. The question is largely one of traffic congestion in the building. Rentals are more difficult because of the time necessary to reach the floor, and to provide adequate and comfortable elevator service requires the allocation of too much space for that purpose.

"There can be no question about the fact that the skyscraper make an important contribution to real estate value in the city. London has no skyscrapers and its real estate values are estimated to be one-third of New York's although the New

THE CONTRACTOR-ARCHITECT

Michigan Architects, Like Those in Indiana, Would Have Him Discontinue His Practice

The contractor-architect situation, a matter that has been discussed now and then at length by Indiana architects is not a purely local state problem, rather it crops out here and there all over the country and of late years seems to be assuming greater and greater proportions. Only recently this matter seems to have drawn the attention of the Michigan Society of Architects, too, who approached the contractors in an effort to ferret out those who maintained architectural departments made plans and built after them allegedly saving to the owner the architect's, and, at other times went to architects and expected to figure the plans of prospective work.

Among the larger contractural operators the architects were received in a friendly manner and co-operation was offered toward eliminating the practice of making plans by contractors.

Just recently the Michigan Society sent a representative delegation to meet with the Mason Contractors' Association of Detroit to discuss the situation.

The account of that meeting set forth in the Bulletin of the Michigan Society brings out many strong points, makes interesting reading and is herewith reprinted.

President Lancelot Sukert of the Society had this to say:

"A perfect building," he said, "is a monument to cooperation, and the contractor is just as necesasry on the building as the Architect is, but only the Architect can properly represent the owner in such a transaction."

"Last February, when the Michigan Society of Architects were considering a date for our convention, an invitation was extended from the Michigan Chapters of the Associated Building Employers and Associated General Contractors if the two conventions overlap for one day at Lansing that joint meeting might be held. The Society immediately decided to accept the invitation, but instead of one day to overlap, three days."

"This indicates to me," he continued, "that the Architects are willing to meet the contractors more than half way toward cooperation. One thing that was impressed upon us at that convention was the tremendous amount of time spent in estimating work. We had it clearly demonstrated before our eyes just how much time is needed for a small job and a large job. And so it is easy to see that the contractor is rendering the Architect a service in estimating and only by cooperation can both Architect and contractor hope to attain the highest usefulness to the owners."

He also brought out the fact that so much is required of the Architect today that he cannot possibly spread his energy to include the field of contracting. "Likewise," he said, "No contractor can possibly do his best at contracting if he is also going to be an Architect. The Architect must decide whether extras are just and many matters of that nature. As soon as an Architect becomes financially interested in the cost of a building he ceases to be an Architect. The Architect is also in duty bound to protect the contractor's interest when the contractor's cause is a just one."

"Any Architect who would purposely hang something on a contractor because a client wanted it done, should be kicked out of his organization, and any contractor who bids in Architects' offices and then doesn't deal fairly and squarely with those Architects, should be known and should be kicked out of their organization."

With this the speaker made an appeal to his listeners asking if they considered the Contractor-Architect a fair deal.

President Butts of the Mason Contractors Assn., next stated that perhaps the Architects were themselves partly responsible for such conditions and cited the instance that some contractors had in the past been required to employ good architectural draftsmen to check shop drawings which it seemed to him should be checked in the Architect's office. This, he said, in some cases might lead to the creation of an architectural department in the contractors office, the next step of which would be to take in work, including plans.

Secretary Cordner of the Society, expressed the belief that the Contractor-Architect was led to making plans by the belief of an advantage over a competitor in having something different to offer and in eliminating competition. Later, he said, if the condition becomes prevalent the advantage will be wiped out and contractors will be back where they started, and the only result will be added overhead of plan departments and sales departments.

Mr. Gallagher, of the masons, spoke of the practice of some offices in permitting so many contractors to figure on one job. This he believed meant that the job would probably be let to the man who made a mistake.

President Sukert answered Mr. Butts by saying that the matter of requiring the contractor to check shop drawings was not generally practiced but was an instance of some individual office. He also replied to Mr. Gallagher by saying that in most cases where so many figured one job it was because so many insisted on being allowed to figure. "It is a problem," he said, "which is not an easy one for the Architect. If he selects five or six and refuses all others, he creates hard feelings among those others who may be in every way en-

STEEL INSURES STRENGTH AND SECURITY

Structural steel is employed in the fine new plant of the Dudlo Manufacturing Co., Fort Wayne, Ind. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

Steel Permits Speed
In Construction

ON A STRUCTURE framed with STEEL, the work proceeds unhampered by weather or climate. As long as men can work, Steel can be erected. Freezing cold, rain, heat, or other interrupting agencies cannot impair Steel's strength or hinder the speed with which building can go on. In winter, Steel does not freeze—does not have to be warmed, protected or kept moist to acquire its strength. It comes to the job, ready to be set in place. When planning winter construction, place your trust in Steel, the one outstanding structural material.

KOEHRING

No interfering bail — that's another thing you'll like when you need to lift out boulders, old timbers, stumps, etc. — that's another reason why the Koehring is the all-service shovel!

Raise or lower boom at command of levers! No need for adjusting crowding cables! Instant readiness for any situation—high bank work, close-in digging — stripping — shallow grading—high or low dumping! Fast on its feet and as easy steering as a motor truck! Know the Koehring!

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Shovel Capacities

Line of plate struck measure. Shock absorber on boom. Quickly convertible to pull shovel, crane or dragline.

(Concluded from Page 7)

titled to figure. If he permits all comers to figure, then he gets panned for it."

Mr. Whittingham spoke regarding the Mason Contractors' Association and its record of having dealt successfully for 25 years with the bricklayers in Detroit. "This, we feel," he said, "is in a very large measure responsible for the splendid labor conditions we have in Detroit today," He stated that to his konwledge this was the first occasion on which the Architects had met with his organization, and expressed the hope that it was the beginning of a better understanding and more cooperation.

Mr. Butts also touched upon the practice of some Architect's offices in the matter of bulletins on which to refigure a job. "These bulletins," he stated, "come out long enough after the figures are in to enable most bidders to ascertain how their bids stand and as a result it amounts to a shake down. One contractor might figure the bulletin at what it is worth, while another who does not stand so well might throw the bulletin. This he condemned as an unfair practice.

The result of the meeting was a very fine and open discussion of many things, some of which did not bear directly upon the matter in question, but indicated a spirit on the part of both organizations to iron out any differences.

There is no doubt the rumors that have come to us concerning Contractor-Architects are largely exaggerated but this gesture is a move to run the rumors down and either prove or disprove them. To this end a motion was passed by the Mason Contractors' Asosciation that President Butts be empowered to appoint a committee on relations with Architects to meet with our committee on relations with contractors.

THE SKYSCRAPER

(Concluded from Page 3)

York area is less than half of London's. the greater city of London receives not quite $200,000,000 from its real estate, whereas the New York revenue amounts to nearly $419,000,000, although the population is 1,300,000 less. On the other hand, the erection of taller structures has inevitably resulted in a traffic problem, for which there is as yet no adequate solution. As a matter of fact, as long as present means of transportation are in vogue, congestion will doubtless be present, for it is much easier to create the centralization that causes the congestion than it is to open up new traffic lanes. There is little hope of decentralization, and the growth of certain popular zones only serves to spread the congestion over larger spaces.

"As has been stated, the trend towards skyscraper construction is even more marked in buildings for dwelling purposes than in office buildings. Residential construction, of course, accounts for the greater part of the country's building expenditures. In its report on building permits in 85 cities for the first half of the past year the Department of Labor showed that only 0.3 per cent of the permits were for office buildings with a valuation of $113,000,000. This represented only 7.9 per cent of the valuation of all permits in these cities for that period, or $1,417,-000,000. During these same six months, however, 33 per cent of the expenditures were devoted to multi-family dwellings, which represented 4.5 per cent of the permits. It is here that the skyscraper industry does its biggest business. There is a decided movement in the cities of the United States toward apartment homes. During the period from the beginning of 1922 to the first half of 1928, the percentage of one-family homes has declined from 43.4 in 1922 to 28 in 1928, while the percentage of multi-family dwellings increased from 34.6 to 61.2 per cent. The increasing urban population is moving into apartments rather than into single dwellings.

"The skyscraper industry, therefore, apparently can expect a considerable expansion and should account for an increasing proportion of the country's enormous volume of construction, totalling about $7,-250,000,000 in the year just past. Its growth will make the question of height limitation more and more a civic problem, from the standpoint of darkened streets and congested traffic. It is, however, an industry here to stay, responding to an unquestioned need."

CUSTOMERS YOU HAVE MET

Even the Architect Runs Into Them

Overcoming sales resistance is the salesman's greatest task. One way to succeed is to study the customer—size him up—ascertain his peculiarities and cater to his likes. Here is a chart of customers defining the various kinds:

1. The Good-natured Customer. — He smiles at your efforts and laughs at your work. Smile with him and laugh at your own expense. It helps the sale.

2. The Doubting Customer.—The one who questions and doubts evry statement you make. Facts and figures go a long way toward silencing this skeptic.

3. The Disputative Customer. — Welcomes a dispute so he can prove his knowledge of things. A mild form of combat pleases him. Use care not to overstep the mark.

4. The Taciturn Customer.—One of the hardest types to handle. You have no way of telling by word of mouth if you have succeeded in arousing interest. Watch the eyes of this person and be less talkative than with the usual type.

5. The Technical Customer.—Usually a close-buying man. To say you "guess" or "think" spells ruin when making your plea here. You must know to be sure with this kind.

6. The Price Customer.—The person who buys price first and article afterward. This type is sometimes sold by asking him to recall some particular purchase where price was the only factor. Call attention to the well-known fact that "the memory of quality lingers long after price has been forgotten."—Views and Reviews.

TOPPLES THE WHOLE STRUCTURE

That Is What Price Slashing Does

"The price cutter of today writes the whole story on the price tag of tomorrow. The individual who insists upon price cutting as a means of obtaining his business is worse than a criminal. He is a fool. He not only pulls down the standing of his company—he not only pulls down his competitors—he pulls down himself and his whole industry. He scuttles the ship on which he himself is afloat.

It is easy to cut a price, but it is difficult to reconstruct the price structure after it has once been pulled down. The constant lowering of prices is an endless process; it lowers us into a hole, the bottom of which has never been reached. The price cutter may be low today, but his competitor will see to it that he is not low enough tomorrow. In this downward trend of prices there comes a time when the selling prices are below the cost of production, profits are dissipated and business is being transacted at a loss. In this wild scramble for volume, industry must learn that distress lurks just ahead and the only remedy lies in the rationalizing of output.

The large corporation, because of its supposedly vaster resources, cannot expect to win at such a game. Whenever the selling structure is lowered so that it focuses attention upon nothing but price, the large corporation is at a serious disadvantage because the small company has the ability to maintain personal contact with customers which is the balance of power often swinging the contract. That intimate contact, offering a specialized service, which a small concern holds out to customers, is a very tangible advantage held over the big unwieldy corporation." (Chas. F. Abbott, Executive Director, Amer. Institute of Steel Constn.)

INDIANAPOLIS BUILDING CONGRESS RESUMES ACTIVITY FOLLOWING SUMMER VACATION PERIOD

Members in Impressive Turnout Hear Distinguished Architect of International Reputation Discuss "Modernism in Architecture"

Vacations are a good thing, they get folks away from themselves, they offer new diversions, they kill the lethargy of routine, they pep up interest, build anew, are excellent investments, and are even fine when completed for folks come back strong for "a comeback."

And it would seem from that which occurred Tuesday noon at the Lincoln Hotel that the Indianapolis Building Congress had profited greatly from its summer vacation and was headed for a big winter season. During the hot summer months all meetings of the Congress were called off, a vacation was announced and that was that. But the weeks have flown since then, practically everybody is back on the job and the Congress, ready for a resumption of business, sent out a call for a regular monthly meeting Oct. 1st. There was a hearty response, approximately one hundred and fifty members, all allied building men, turned out keenly interested in the meeting. There were architects, engineers, general and sub contractors, plumbers, heating men, electricians, material supply men and representatives of the financial interests present.

Officers Aware of Need for an Exceptional Program

Nor were those in charge of affairs unmindful of the importance of this initial meeting of the season, hence, they prepared well in providing as a feature speaker Harvey Wiley Corbett, New York City, one of America's foremost architects, distinguished abroad as well as in this country. In this presentation the Congress is to be congratulated for by its action it brought to its members contact with a man of proven ability, a man of wonderful vision and one who speaks with authority. It really is a rare opportunity to be privileged to hear such a man speak nor were those present unmindful or unappreciative of the occasion for such an opportunity if expressions, heard on all sides following the meeting, were to be taken as a criterion.

President Robert Frost Daggett of the Congress in introducing Mr. Corbett injected into his remarks some interesting and amusing personalities bringing out the fact that "the stranger from afar" had at one time been a resident of Indianapolis, in fact, had attended Shortridge High School at the same time Mr. Daggett had. This information brought the speaker close home to his auditors, made him more one of the "Hoosier Family."

Such Group Gatherings Inspire Hope for the Future

"It is most encouraging," began the speaker, "to see such a group as this gathered together, all, factors in the building industry, sitting down together in the common bond of service. Such has not always been the case, in years past the various elements of the industry were inclined to go it alone to hold themselves aloof, in fact, some had a tendency to hold themselves superior to others, to "high hat" the other fellow, so to speak. There were times when architects looked upon engineers as hard boiled individuals, and the engineers' opinion of architects was that they were soft shelled crabs. However, men have come to realize, as someone has put it, that if there were no architects, buildings would fall down, and, if there were no engineers, we would have to pull buildings down.

"They say architects are imaginative individuals. They should be, for the imaginative faculty is most needed by architects in America today to meet the ever-expanding building problems. And that brings me to the subject upon which I am going to speak, 'Modernism in Architectpure.'

Modernistic Tendency Apparent All About Us

"There are evidences of modernism in everything architectural today, plans, details, design, construction. The public is at a loss to understand what the new stuff means, what it is all about, and it is our duty to acquaint them with it, educate them.

"American architecture has had a marvelous development in the last twenty or thirty years. Up to the time of the Columbian Exposition at Chicago, American architects had relied upon European architecture for design, for Europe was a land of research, had gone back and studied ancient forms, design and structure. You see the American architect had had his nose to the grindstone, he was so busy building to keep up with the demand that he had had no time for research and had to rely on established forms of architecture.

"However, new types of businesses have come along to call for structures such as the Old World had never known and American architects have been forced to design and plan accordingly to meet the requirements. As a consequence they have taken the old forms, built them up into the air, pulled them out added to and embellished with the result that we have structures today strictly American.

Old Styles Have Outlived Their Usefulness

"The old styles were all right in their place, they are like antiques and were all right for the purpose for which they were designed. Take the chairs of old, for instance, with their stiffness and high straight backs, they were made for men to sit in who wore armor and carried a sword, not for the comfort of the modern business man.

"And now having created real appreciation of the effectiveness of the modern tendency, why can't we have architecture in the terms of the problems of today? Why should we live in a peasant's cottage if we can afford to live in a palace.

"Fashion plays a big part in modern architecture. We do not build with the idea of permanence that held in the old days. In Europe residences were built in which several generations of the family were expected to live. Today in America the ease of transportation has caused people to move about, to spread out. The old style of architecture built with the

A QUESTION ABOUT WHICH MANY ARE CONCERNED

The Answer is That Architects Must Bestir Themselves and Pay More Attention to What Is Going on Around Town

"What is wrong with architecture?" That is the problem the architects of Michigan through their society are seeking to solve. The problem, though particularly stressed by the members of the profession in the sister state, is not that of Michigan alone, rather, the points brought out and the arguments advanced are mutual to other localities, and Indiana is no exception.

For instance, President Lancelot Sukert of the M. S. of I., in an appeal to his membership calls attention to the fact that matters of tremendous importance to the architects of the state are confronting the profession, a critical stage has been reached and "already a great amount of time and attention has been spent upon these by the old dependables, that small half dozen members who always respond when called upon and who, therefore, are always called upon in time of need. This small group is now veritably swamped with Society work, so overburdened that help is needed, willing help which can be depended upon to take the active initiative and to give a certain amount of time and work to the problems at hand. The officers and directors are giving so much of their time and attention—and so much more is needed than they can give, that they must have help."

Isn't that latter situation true of Indiana? The Indiana Society of Architects, like that of Michigan was formed to take care of the business side of the architectural practice, the business side, mind you, not the professional angles so much, rather, to look into matters along legislative, civic and other lines that would have a direct or indirect influence on the business of practice. For years the Indiana Society has battled in that endeavor, and was enabled to wage its campaigns, not alone for the benefit of its members but in the interest of all Indiana architects. And why was it thus enabled? Because of the dependables, the small group who could always be relied upon when needed, the few men who sacrificed self interest to the cause of their profession. There come times when "the going is heavy" and help is needed.

Personal Equation Entirely Eliminated

It should be borne in mind that the Indiana Society of Architects is not a personal affair, instead, it is interested only in the good of the professional practice and its entitled progressive perpetuation that all state architects may prosper through the effort exerted. Because willing men give of constructive thought that the best possible good may be accomplished, and sacrifice personal time to that end, should not be construed as changing the general aim of the organization, the greatest benefit for the greatest number.

Both State Organizations Face the Same Proposition

The Michigan Society announces to its state architects that it has made a noble effort to strengthen the standing of the profession in Michigan, and has fought tooth and nail in the state legislature to obtain more favorable legislation clear down to the last ditch only to be beaten now and then by unlooked for and unexpected adversaries. The same holds true in Indiana as anyone who has followed efforts of the Society of Architects in this state. But these fights have been waged by "the dependables," not by a united front of state architects. Any legislative success favorable to architects attained has only come through cooperation with other allied building interests worked up by the Society. Even with such help, the effort to secure an Architects Registration Law ran into determined opposition from a big building material interest and a compromise had to be effected before the law was passed. That compromise pulled much of the so-called "teeth" out of the law which in its present form fails to protect the small prospective owner who builds, the man who should be protected above all others. At that the architects of the state were not involved one hundred per cent in the passage of the law as they should have been. A one hundred per cent professional backing aided and abetted by preliminary educational work on the part of the architects would have helped in this legislative campaign and given strength to better success. Complaints against the present law have been registered by architects from all over the state, many of whom didn't turn a hand toward securing the passage of the law in its original draft, and yet, these same men have for years favored a license or registration law.

Others Awake to the Situation Indiana Architects Should Be

Michigan architects realize all architects are facing a critical future and they are arising in their own defense. Indiana architects should band together, too. The profession everywhere is confronted by politicians suggesting the creating of officers for "public architects" to handle all state, city, county, school and other public institutional work, the slogan being "to wipe out the excessive fees paid to architects." Contractors are encroaching on the architecural field and are offering plans gratis, the attraction being, "save the architect's fee."

wood floors, wood sash, plumbing, electrical wiring.

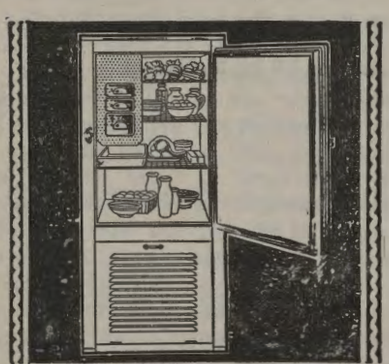
Contracts Awarded

***Telephone Exchange Building:** 4-stys. and bas., 70x110, northeast corner Union and Taylor streets, Kokomo. Archt., Vonnegut, Bohn and Mueler, 610 Indiana Trust Bldg., Indianapolis. Owner, Indiana Bell Telephone Company; C. H. Roettger, president, 256 North Meridian street, Indianapolis. Starting excavating; general contractor, Leslie Colvin, 823 Continental Bank Bldg.; structural steel awarded to Insley Manufacturing Company, 801 North Olney street; reinforcing steel awarded to Truscon Steel Company, 812 Union Title Bldg., all of Indianapolis.

Apartment and Stores Buildings: $225,000.00, 4-stys. and bas., East Washington street, Indianapolis. Private plans. Owner, National Securities Corporation, Arthur R. Valinetz and F. C. Bodner, 711 Meyer-Kiser Bank Bldg. Brick, stone trim, reinforced concrete, structural steel, composition built-up roof, steam heating plant, plumbing, electrical wiring, copper set store fronts, plate glass, apartment equipment. Will contain 5 store rooms on ground floor and 46 apartments on upper floors.

Residence and Garage: $65,000.00, 2-stys. and bas., 56th and Meridian streets, Indianapolis. Private plans. Owner, National Securities Corporation, Arthur Valinetz and F. C. Bodner, 711 Meyer-Kiser Bank Bldg. Will start work soon. General contract awarded to Bodner Construction Company, 711 Meyer-Kiser Bank Bldg. Brick, stone trim, slate roof, hot water heating plant, oil burner, water softner, laundry equipment, mechanical refrigeration, terrazzo floors, tile work. Will contain 17 rooms and 5 bath rooms.

Residences and Garages (2): $60,000.00, each, 2-stys. and bas., North Meridian street, Indianapolis. Private plans. Owner, National Securities Corporation, Arthur Valinetz and F. C. Bodner, 711 Meyer-Kiser Bank Bldg. Will probably start work in about 30 days. General contractor, Bodner Construction Company, 711 Meyer-Kiser Bank Bldg. Brick, stone trim, slate roof, hot water heating plant, oil burner, water softener, laundry equipment, mechanical refrigeration, terrazzo floors, tile work.



Residence and Garage (16 rooms): 2-stys. ,and bas., Golden Hill, Indianapolis. Archt., Burns and James, 314 Penway Bldg., Indianapolis. Owner, Herbert M. Woollen, 1719 North Pennsylvania street. Excavating, general contract awarded to Charles Latham, 204 Empire Life Bldg. Brick, concrete, stucco, tile roof, vapor steam heating plant, stone floors, wood floors, wood sash, tile baths.

Factory Building (oil storage): $20,000.0, 2-stys. and bas., 36x93, 29th street and Canal, Indianapolis. Private plans. Owner, D-A Lubricant Company, Inc., Frank L. Binford, president, 29th street and Canal. Permit granted; general contract awarded to Brown and Mick, Inc., 1020 East Michigan street. Reinforced concrete construction, composition built-up roof, tin clad fire doors, tile coping, creosoted block floors.

***Playground Comfort Station:** $7,500.00, 1-sty., located at Rader and Udell streets, Indianapolis. Archt., Victor H. Winterrowd, 146 North Delaware street, Indianapolis. Owner, City of Indianapolis, Park Board; John Milnor, president, City Hall. Work started; general contractor, Unversaw and Miller, 1115 South West street; electrical wiring awarded to Charles L. Smith Electrical Company, 122 South Pennsylvania street.

***Playground Comfort Station:** $7,500.00, 1-sty., located in Ellenberger park, Indianapolis. Archt., Victor H. Winterrowd, 146 North Delaware street, Indianapolis. Owner, City of Indianapolis, Park Board; John Milnor, president, City Hall. Work started; general contractor, Unversaw and Miller, 1115 South Best street; electrical wiring awarded to Charles L. Smith Electric Company, 122 South Pennsylvania street.

***Playground Comfort Station:** $7,500.00, 1-sty., located at Michael and Wyoming streets, Indianapolis. Archt., Victor H.

STEEL INSURES STRENGTH AND SECURITY

Structural steel trusses of 150 ft. span with curved top chord are found in the Tech gymnasium in Indianapolis. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

STEEL PAVES THE

Look around the industrial section of your city, observe the abandoned or unusual factory buildings. These factories appear to have been constructed for a special use, cannot be reconstructed for another occupancy, and fail to attract a purchaser or tenant. Usually they are built in the cheapest possible manner, poorly and unintelligently planned with non-articulated structural framing, inflexible and inadaptable to new conditions. They have unalterable limitations. They have four walls and a roof, but that is as far as they go toward constituting a modern factory.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

The interesting 150 ft. steel job shown above uses flat trusses, erected over kilns, around stacks, etc., for the National Malleable Castings Company. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

THEY FOR PROGRESS

Had such factory buildings been framed with structural steel, they would not today stand as a bar to progress, forming a "dead area" in your community. They could have been modernized, or moved, and still be contributing their part toward the industrial growth of your community. A steel frame is the only construction with complete flexibility and adaptability. Its units can be readily removed, or easily strengthened to meet growing demands. The steel frame is demolished quickly and cheaply and is a valuable salvage. Build for your city's future, with structural steel.

Sealed Proposals

CITY HALL
NOTICE TO CONTRACTORS

Notice is hereby given by the Common Council of the City of Elwood, Indiana, that it will on Monday, October 21st, 1929, at eight o'clock P. M., at the Council Chamber in the City of Elwood, Indiana, receive sealed bids, for the installation of a heating system in the City Building in said city, according to the plans and specifications prepared by Mr. Walter Breining, 909 Roosevelt Building, Indianapolis. Plans and specifications have been approved by the said Common Council.

Plans and specifications are now on file and may be seen in the office of the city clerk of the City of Elwood, in the office of the State Board of Accounts, and in the office of the mechanical engineer.

All bids must be submitted in writing on Forms Number 96 and 96A. The Common Council reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three (3%) percent of amount of bid; checks made payable to the City of Elwood, Indiana, to be held by said city as a guarantee of good faith, and that the successful bidder will execute a contract and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contract will be returned within ten days.

Should the successful bidder fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check as liquidated damages.

CHARLES H. FOSTER,
Mayor, City of Elwood, Indiana.
Florence E. Austill, Clerk.
Herman F. Willkie, City Attorney.

SCHOOL HOUSE
NOTICE TO BIDDERS

NOTICE IS HEREBY GIVEN, that the undersigned, Harrison Township, Knox County School Realty Company, an Indiana corporation, whose principal office is in the town of Monroe City, Harrison Township, Knox County, in the State of Indiana, will receive sealed bids at the office of Howard R. Burnett, secretary of the corporation, Monroe City, Indiana, up to and until 10:00 A. M., Saturday, October 26, 1929, for the erection of a school building adjoining the Harrison Township Consolidated School Building in Monroe City, Harrison Township, Knox County, Indiana. Plans and specifications for said work are now on file in the office of said company and elsewhere as required by law.

This work will be divided into three classes to-wit: GENERAL CONTRACT, HEATING & PLUMBING AND ELECTRIC WIRING. Bidders may bid on any of the above classes separately, any combination of classes or on the work as a whole.

Each bidder on this work shall file his bid in a sealed envelope plainly marked with the name and address of the Bidder and the class or Classes of work bid upon.

Each bidder shall file with his bid a CERTIFIED CHECK made payable to Howard Burnett, Secretary and Treasurer

of said company for three percent of the largest amount of the work bid upon, which check will be forfeited to said company in event the bidder is unable to give satisfactory bond or does not enter into contract with said company within five days after his bid is accepted. Certified checks attached to rejected bids will be returned to bidders when bid is rejected and to accepted bidder when contract is signed.

Each bidder shall also file with his bid a Surety Bond for the full amount of the largest amount of work bid upon. Bond shall be given with a Surety Company licensed to transact business in the State of Indiana. Which bond shall be conditioned not only for the faithful performance of the Contract, but for the payment of all debts incurred directly or indirectly.

Each bidder shall also file with his bid his Affidavit of Non-Collusion as required by law and a financial statement of General Form 96-A as prescribed by State Board of Accounts in accordance to Acts of 1929 Chapter 202 page 680.

Bidder desiring to bid on any part or all of said work may obtain Plans and Specifications and Bidder's Forms, complying with all the above requirements, by application to the office of the Architect and Engineer, JOHN B. BAYARD, located at the corner of Third and Main streets in the City of Vincennes, Indiana.

Payment on the above work will be made on certificates issued by the Architect based on 85% of the value of material and labor forming a part of the work and 70% of the value of non-perishable material properly protected from damage in the opinion of the Architect.

The said Harrison Township Knox County School Realty Company hereby reserves the right to reject any or all bids submitted on above work.

IN WITNESS WHEREOF, the Harrison Township Knox County School Realty Company by authority of its Board of Directors has caused its corporate name to be hereto subscribed by Charles A. Adams, its president and attested and its corporate seal to be hereto affixed by Howard R. Burnett, its secretary this 24th day of September, 1929.

RESUMES ACTIVITY

(Continued from Page 3)

thought of permanence of residence is no longer important, the same value does not attach to it. We do not build that way today.

"In New York City our hotel buildings have a life of some 15 to 18 years, and an apartment house of about 12 years. In Eureope residences are built for families to live in for generations. The result is that the stability and permanence in homes and localities is changing. People don't feel that way about things now. When an architect gets a big contract these days, he don't figure on his building being a monument to his ability at which future ages will marvel, rather, he wonders in the back of his mind whether or not he can get the job of re-building it when it is torn down."

"Relative to the new b uilding in New York City which I am designing, it will be 100 stories high and covers an entire city block. We tore down five skyscrapers of 24 stories, everyone built within the last 15 or 20 years. Why? Because it is better to operate a single building and operate it as a unit. When completed, it will house 35,000 employes and will mean an annual saving to the Metropolitan Insurance Company of something like one million dollars.

"Buildings will be built in the future, I believe, by entirely new methods of construction. It is my opinion that the future will show ne wand more artistic methods of construction, by the re-fashioning of materials and these materials will h ave a replacement value when the building has to come down. These materials will be used some other place. This constitutes, I believe, modernism in architecture. It is the use of materials and their possibilities in the building, their replacement value, artistic treatment, beauty of style, speed of erection, and individuality, which will go to make up a real modern style. The erection of a machine to function in an individual way in the form of a building, studying every part of it with respect to its character, the realtion of each part to the whole, these are factors which should be the basis of design and when they are, and when architects will use them in that way, as the basis of design, then we will have an architecture which will be inherently American, indisputably beautiful, and the marvel of the world.

"In the Chicago World's Fair for 1933 of which I am Chairman of the Board of Architects, we intend to show how modern ideas and modern methods of building construction can best be put into effect. This fair will publicly illustrate the century of progress of science and invention from the time Chicago receive its charter as a city, at which time it was a log fort on a mud flat, and now it stands as the leading city of the center of the United States.

(Concluded on Page 20, Col. 1)

LEGAL ADVERTISING

For Building Construction

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

"We prepose in this fair to incorporate as a part of the architectural design the problem of transporting all people about the fair. People no longer walk. It is our idea that by the use of lifts, moving stairways and sidewalks a nd exits by boats, this problem can be solved. The strip of land on which the fair is to be built is five miles in length and the architects will have to make it as beautiful from the air as from the ground as it will be viewed from the air as well as from the ground. Artificial lighting is to be used to the utmost degree; the exhibits are going to be selected with care and the whole, architecturally, in construction, in the matter of displays, in every way will impress the wonderful scientific and inventive progress that has been made in the last one hundred years. No one, not even the man with a "tin lizzie" and the price of gasoline, can afford to miss this contemplated Chicago Fair of 1933."

A QUESTION

(Concluded from Page 7)

If anything is the matter with architecture, it lies in the fact that, as has been suggested, many architects have been so busy to protect their clients, too intent to render service, that they have not taken time to see what is going on about them. What is more, the world at large does not actually know what the architects are, except that they draw plans and there are so many plan books in distribution, so many stock plans floating about, that the public imagines it too could make plans if given a few hours, a pencil and a ruler.

All Architects Involved

Architecture as a profession, and architects as a part of it, have problems in reality to solve. The situation is mutual to all architects. They must take a grip on things, must come out in the open and stand for their just dues. They must stand solidly together and declare themselves at every opportunity. It is not work for the individual or a few individuals, it is work for all and the best and most effective channel for such endeavor is through an organization which is constantly on the job, in touch with every nook and corner of the state.

To answer the opening question. Nothing is the matter with architecture, the trouble lies in the fact that the architects, themselves, must awaken to the situation that has stolen upon them and by word, deed and unity put the profession in its rightful position before the public.

In Indiana the State Society of Architects, to which all architects should rally, is the agency that can best serve the purpose of the profession, the architect, building and the public at large.

SPECIAL DAY TO BE GIVEN OVER TO THE INDIANAPOLIS BUILDING CONGRESS AT THE APPROACHING INDIANA BUILDING CONGRESS AND TRADE SHOW

Capital City Organization Preparing an Especially Attractive Program for the Occasion

Thursday, October 24, will be an important day at the coming Indiana Building Congress and Trade Show which is being held during the week of October 21 to 26, inclusive, in the Manufacturers' Building at the state fairgrounds.

This day will be set aside for the Indianapolis Building Congress, headed by Robert Frost Daggett, prominent Indianapolis architect. The Indianapolis Building Congress is an organization made up of all elements in the construction industry in the city of Indianapolis. This organization is co-operating with the state body sponsoring the congress and show, on all matters of interest to the Indianapolis organization.

According to President Daggett, the functions of a building congress will be explained at a luncheon meeting to be held on that day. The luncheon speaker will be Robert D. Kohn, prominent New York City architect, the present president of the New York Building Congress and one of the prime movers in the building congress movement throughout the country. Mr. Kohn came to Indianapolis and helped in the formation of the Indianapolis Building Congress, a body similar in activity to the New York, Boston and Philadelphia building congresses. It was at Mr. Kohn's suggestion that Kate B. McCann, formerly connected with the New York Building Congress, was appointed executive secretary of the local organization at Indianapolis.

In a recent interview Miss McCann had with Mr. Kohn, he states in regard to himself, "my real education began with my start in the practice of my profession in New York City in 1897, after I had worked for several years in various architect's offices. I was lucky from the very start for I found clients ready to let me be architect of many buildings throughout greater New York. Although I started to practice independently, my wartime experience as Chief of Production of the Housing Division of the Emergency Fleet led me to realize the importance of co-operation between groups of architects.

The Indianapolis Building Congress was organized in May, 1928. Among the activities of the local group to date have been the awarding of craftsmanship certificates and buttons to outstanding craftsmen on the erection of the new L. S. Ayres building, as well as the setting up of machinery for the training of apprentices, in various trades, the setting up of arbitration methods and facilities, and the beginning of study on the matter of a credit plan and a safety code for the industry.

Prominent among its members are J. E. Hall, contractro, Leslie Colvin, contractor, Herbert Foltz, architect, Arthur Bohn, architect, William F. Hurd, building commissioner, Charles Brossman, engineer, E. D. Pierre, architect, Kurt Vonnegut, architect, and other leaders in the local industry. Robert Frost Daggett is president, G. T. Sanbourn, S. P. Meadows and W. L. Bridges are vice-presidents, E. J. Wuensch is treasurer, C. J. Spickelmier is secretary and Kate B. McCann is executive secretary.

DOWNWARD TREND IN BUILDING AGAIN DEVELOPS

Indianapolis Volume of New Work Shortens Up in September

Downward once more slipped the building trend at Indianapolis during September, after an encouraging increase in August. The 781 permits with an estimated valuation of $1,590,172 was nine permits below the preceding month's issuance while the valuation slipped $246,533, a loss of 13.42%. However, the September estimated valuation was an increase of $215,647 or 15.68% over the July total even though the permits issued last month were 65 less than the July issuance. A comparison with the figures posted a year ago shows that the September, 1929 totals for permits and estimated valuation were respectively 150 and $450,866 off.

A check up of the types of buildings for which permits were issued last month, as prepared by Miss Clara Oxley, Statistician of the City Building Inspection Department, follows:

Accessory Bldgs.	184	76,544
Business Bldgs.	28	326,438
Dwellings	102	598,650
Industrial	2	108,500
Miscellaneous	155	145,107
Public	1	210,000
Repairs and Alterations	309	124,933
Total	781	1,590,172

INDIANA BUILDING CONGRESS AND TRADE SHOW AROUSES STATE-WIDE INTEREST

Nature and Scope of Project Expected to Bring Together Greatest Gathering of Builders Ever Assembled in Indiana

Intense interest in the fast approaching Indiana Building Congress and Trade Show, soon to take place in the Manufacturers Building at the State Fairgrounds at Indianapolis, is manifesting itself, the attractiveness of the new venture apparently having reached throughout the state. Inquiries regarding the event daily are pouring into Building Congress headquarters from architects, contractors, material men and others allied with the building industry while reports from men traveling about the state and who contact with these various elements indicate that plans are under way in the different cities to send large individual delegations to Indianapolis for the event. All of which promises the greatest assemblage of state builders ever drawn together in Indiana, an assemblage representative of the whole state building industry, something never before accomplished at one event in Hoosierdom.

Awake to the Responsibility

Naturally, those in charge of the Congress and Trade Show are deeply appreciative of the responsibility that is theirs and the importance that attaches to the affair and, as a consequence, have worked out a program on a large and instructive scope.

The several days have individually been designated after each of the various fundamental working elements of the industry with one day named in honor of the Indianapolis Building Congress, the only such city body in the middle-west and one of the few city building congresses in the country.

Prominent Building Men of National Reputation to Speak

Special sessions will be held by the architects, contractors and sub-contractors, engineers, craftsmen and other constituent member bodies affiliated with the state congress. Prominent men of the country identified with the building industry have been secured as speakers thus assuring messages of interest and value to congress visitors. These sesions while under the individual guidance of the architects, contractors, etc., will be open to all builders at all times, and since the speakers will have messages of wide and varied natures they all will appeal to the constructive thinking man.

Among those announced to appear are two speakers, nationally recognized as authorities in their respective fields of the building and allied arts industry, who will address the sessions of the Indiana Building Congress and Trade Show, on Tuesday, October 22, at the Manufacturers Building.

Tuesday has been designated Contractors' Day, and the sessions will be especially attended by contractors from all over the mid-west, in addition to many others identified with the building industry at large.

Oscar W. Rosenthal of Chicago, known all over the nation as an "up from a shoestring" contractor, is the first speaker announced. Mr. Rosenthal at one time was romantically "broke" in Chicago, and made a heroic steady climb to success in the contracting field through his almost superhuman efforts.

He is recognized today as one of the outstanding orators of the nation, as well as being a salient success in the business world, and will address the sessions on "Contracting," the subject to cover an extensive field of discourse. Among the business connections in building circles attained by Mr. Rosenthal are included: National Home Modernizing Bureau director; prominently identified with the Associated General Contractors of America; President Associated Contractors of Illinois.

R. G. Kimbell of Washington, D. C., director of the Architectural and Building Code Bureau of the National Lumber Manufacturers' Association, also will address the sessions on Tuesday, October 22. Mr. Kimbell's connection with this vital division of the building industry particularly fits him to address the sessions from an authoritative standpoint.

Trade Show to Cover Wide and Diversified Field

As for the trade show itself there will be an astounding display of building materials, machinery, contractors' equipment and all else that goes to interest the builder in his business. One particularly interesting feature will be an architectural exhibit sponsored by the Indiana Society of Architects. In addition to all this there will be practical demonstrations of materials, machinery, equipment, etc., by experts and also talks by technical men, covering the particular functions of the various things exhibited.

The Building Congress and Trade Show will be open during the day only to builders and building men that they may get the best out of it, but at night the general public will be admitted. Since there will be no admission fee, no children will be admitted unless accompanied by an adult.

Whole Offers Rare Opportunity to Hoosier Building Fraternity

Here is a week no builder or building man in Indiana can afford to ignore, it offers an opportunity such has never been presented to the building fraternity of the state. Think it over, prepare to attend.

AN EVENT OF RED LETTER PROPORTIONS TO THE INDIANA ARCHITECTURAL PROFESSION

Years of Constructive Thought and Effort Mark Indiana Society of Architects as an Important Factor in the State Building Industry

An important date for the Indiana architectural profession looms just ahead. It is October 23. That is the date being heralded about the state, and elsewhere, as Architects' Day at the Indiana Building Congress and Trade Show to be held at the State Fair Grounds, Indianapolis, the week of October 21 to 26, inclusive. This offers the profession of Indiana a real opportunity not only to get together, to fraternize, to hear some excellent talks and discussions, to acquaint itself with the latest developments in materials and construction methods, to see practical demonstrations of materials and equipment, but also the chance to stand forth as a vital and important factor in the second largest industry of the country, that of building construction.

Architects the Missionaries

Some architects of the state may not appreciate the situation fully, but they all should, further, a certain sense of pardonable pride should be theirs in the fact that the Indiana Building Congress is now a reality and the trade show is an off shoot of that organization, promising to be a new era marking event. It was the architects, through the Indiana Society of Architects, who several years back conceived and advocated the idea of a State Building Congress, a body composed of the many individual building interests working in conjunction and cooperation for the general advancement of the state building industry.

State Building Congress Formation Proposed

Back and beyond the congress idea was the all-important matter of active cooperation between the allied building interests and the architects of Indiana played the part of missionaries in that line. Ten years ago the Indiana Society of Architects under the guidance of the late E. Hill Turnock, made overtures to the Associated Building Contractors of Indiana to effect a cooperative policy through which it might be possible for the two elements to meet on the ground of mutual interest to eliminate misunderstandings, smooth out aggravating, impeding building problems, undertake progressive business policies and launch constructive legislative moves. Thus was cooperation effected and from that beginning other interests, engineering, labor, material and financial, were drawn into the scheme.

Such progress inspired, a few years ago, an attempt to organize a state building congress. The idea presented to the Indiana Society of Architects by Merritt Harrison, seemed visionary and decidedly radical and it was some time before it took hold. However, the architects in time espoused the cause and became crusaders for the formation of such a body. The building contractors represented by the Association Building Contractors of Indiana, fell in with the scheme. These two state organizations worked in earnest on the congress idea. The time was ripe for action, as the cooperation effort had extended to other fields and the State Building Congress came into being, being made up of these constituent members, Indiana Society of Architects, Indiana Chapter American Institute of Architects, Associated Building Contractors of Indiana, Indiana Engineering Society, Indiana Builders' Supply Association, Indiana Association of Electrigists, Indiana Society of Sanitary Engineers, Indiana State Building Trades Council, Indiana State Council of Carpenters, Indiana State Association of Plumbers & Steam Fitters, Indiana State Masonry Conference, Indiana Master Painters and Decorators Association, Indiana Structural Board of Trade, and also an associate member, the National Lumber Manufacturers Association.

And in view of all this the Indiana architect may well feel a pardonable pride in the Indiana Building Congress and Trade Show, by means of which the building industry of the state steps out before the people as a reorganized, revitalized, united and powerful industry. The architect has been a big influence in this achievement.

More Than Just a Day, Loyalty and Pride Should Make It An Occasion

Architects' Day at the Trade Show should carry to every Indiana architect an especial appeal, it is the culmination of years of effort in the right direction, will be a red-letter day on the professional architectural calendar. It should be a real jollification for each and every member of the profession. It means the architects, working together, can do things working in unity, it makes them a real recognized factor, along with others in the field of building industry. Loyalty to his profession should move every state architect to maké every endeavor to be present at the Congress and Trade Show

STEEL INSURES STRENGTH AND SECURITY

New Theatre and Hotel Building, Anderson, Ind. A. M. Strauss, Ft. Wayne, Ind., Architect. Leslie Colvin, Indianapolis, General Contractor. Steel fabricated by The Rochester Bridge Co., Rochester, Ind.

STEEL IS PERMANENT

Structural steel will last indefinitely—its permanence is fixed scientifically. Bridges and other steel structures exposed to air and moisture require only cleaning and painting at intervals. The concensus of opinion among leading engineers is that no steel structure, which has had the most casual attention, has ever been seriously affected by corrosion.

The permanence of steel is a native characteristic of the metal, determined by the standards of its composition, manufacture, and fabrication. Fixed scientifically, it is a factor not dependent on construction conditions or the "human equation."

All structural steel members are designed with a big reserve of strength and endurance—a positive assurance of true permanence.

KOEHRING

No interfering bail— that's another thing you'll like when you need to lift out boulders, old timbers, stumps, etc. — that's another reason why the Koehring is the all-service shovel!

Raise or lower boom at command of levers! No need for adjusting crowding cables! Instant readiness for any situation—high bank work, close-in digging — stripping — shallow grading—high or low dumping! Fast on its feet and as easy steering as a motor truck! Know the Koehring!

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Shovel Capacities
Line of plate struck measure. Shock absorber on boom. Quickly convertible to pull shovel, crane or dragline.

receive sealed bids, for the installation of a heating system in the City Building in said city, according to the plans and specifications prepared by Mr. Walter Breining, 909 Roosevelt Building, Indianapolis. Plans and specifications have been approved by the said Common Council.

Plans and specifications are now on file and may be seen in the office of the city clerk of the City of Elwood, in the office of the State Board of Accounts, and in the office of the mechanical engineer.

All bids must be submitted in writing on Forms Number 96 and 96A. The Common Council reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three (3%) percent of amount of bid; checks made payable to the City of Elwood, Indiana, to be held by said city as a guarantee of good faith, and that the successful bidder will execute a contract and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contract will be returned within ten days.

Should the successful bidder fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check as liquidated damages.

CHARLES H. FOSTER,
Mayor, City of Elwood, Indiana.
Florence E. Austill, Clerk.
Herman F. Willkie, City Attorney.

SCHOOL HOUSE
NOTICE TO BIDDERS

NOTICE IS HEREBY GIVEN, that the undersigned, Harrison Township, Knox County School Realty Company, an Indiana corporation, whose principal office is in the town of Monroe City, Harrison Township, Knox County, in the State of Indiana, will receive sealed bids at the office of Howard R. Burnett, secretary of the corporation, Monroe City, Indiana, up to and until 10:00 A. M., Saturday, October 26, 1929, for the erection of a school building adjoining the Harrison Township Consolidated School Building in Monroe City, Harrison Township, Knox County, Indiana. Plans and specifications for said work are now on file in the office of said company and elsewhere as required by law.

This work will be divided into three classes to-wit: GENERAL CONTRACT, HEATING & PLUMBING AND ELECTRIC WIRING. Bidders may bid on any of the above classes separately, any combination of classes or on the work as a whole.

Each bidder on this work shall file his bid in a sealed envelope plainly marked with the name and address of the Bidder and the class or Classes of work bid upon.

Each bidder shall file with his bid a CERTIFIED CHECK made payable to Howard Burnett, Secretary and Treasurer of said company for three percent of the largest amount of the work bid upon, which check will be forfeited to said company in event the bidder is unable to give satisfactory bond or does not enter into contract with said company within five days after his bid is accepted. Certified checks attached to rejected bids will be returned to bidders when bid is rejected and to accepted bidder when contract is signed.

Each bidder shall also file with his bid a Surety Bond for the full amount of the largest amount of work bid upon. Bond shall be given with a Surety Company licensed to transact business in the State of Indiana. Which bond shall be conditioned not only for the faithful performance of the Contract, but for the payment of all debts incurred directly or indirectly.

Each bidder shall also file with his bid his Affidavit of Non-Collusion as required by law and a financial statement of General Form 96-A as prescribed by State Board of Accounts in accordance to Acts of 1929 Chapter 202 page 680.

Bidder desiring to bid on any part or all of said work may obtain Plans and Specifications and Bidder's Forms, complying with all the above requirements, by application to the office of the Architect and Engineer, JOHN B. BAYARD, located at the corner of Third and Main streets in the City of Vincennes, Indiana.

Payment on the above work will be made on certificates issued by the Architect based on 85% of the value of material and labor forming a part of the work and 70% of the value of non-perishable material properly protected from damage in the opinion of the Architect.

The said Harrison Township Knox County School Realty Company hereby reserves the right to reject any or all bids submitted on above work.

IN WITNESS WHEREOF, the Harrison Township Knox County School Realty Company by authority of its Board of Directors has caused its corporate name to be hereto subscribed by Charles A. Adams, its president and attested and its corporate seal to be hereto affixed by Howard R. Burnett, its secretary this 24th day of September, 1929.

HARRISON TOWNSHIP KNOX
COUNTY SCHOOL REALTY CO.
By Charles A. Adams,
President.

Attest:

LEGAL ADVERTISING

For Building Construction

The Logical Publication in Which to Place It, and Thus Assure the Aim Intended, the Securing of Good Competitive Bids, Is the

Indiana Construction Recorder

This Publication Is the Only Strictly Building Construction Newspaper in Indiana with a Bona Fide Paid Up Circulation That Reaches General Contractors, Sub-Contractors and Building Material Supply Men Throughout the State Regularly Each Week

AN EVENT

(Concluded from Page 7)

October 23 to aid in making it one of the biggest days of the whole week.

The show itself is to be particularly interesting with its wealth of exhibits and attendant demonstration features. Too, there will be a special program of talks by men nationally known in the building field among them being Dr. Allen D. Albert, member of the Chicago World's Fair Commission, a brilliant speaker. Also an effort is being made to put on a special trip of inspection for architects through the new Scottish Rite Temple, a real architectural achievement.

The Culmination of a Long Crusade

What more need be said? This is an event beyond any other staged by Indiana architects, it is the result of constant, sincere endeavor by the state profession, its outcome, its success, its effect is in the hands of the architects themselves.

FALL DECLINE IN BUILDING ACTIVITY EVIDENCED IN INDIANA

September Figures Show Quite a Let-Up in New Work

There was quite a recession in building activity in Indiana during September as compared with that of previous months of the current year. The same held true relative to comparative figures of September, 1929, and the corresponding period a year ago.

Figures submitted by the building commissioners and chief inspectors of the thirteen leading cities of the state where new building construction work is passed upon and recorded show that the estimated valuation on work, for which permits were issued in September of this year totaled $4,979,503 as against $6,744,004 posted in August, a decline of 26.16% from the previous month's business. Again, last month's figures compared with the business recorded during the corresponding period in 1928 revealed a loss, for September, 1929, of $1,143,671 or 18.67%.

A check-up of the individual new building performances of the various cities last month reveals the fact that five of them showed gains over the returns for September, 1928, and eight of them suffered losses varying from 8 to 76%.

Little Kokomo broke out with a building rash to make the best gain over last year of all the cities, her advantage running up to 648.75%. Other cities registering gains over the corresponding period a year ago were: Gary, 125.8%; Richmond, 99%; Elkhart, 74.57%; Michigan City a slight improvement, just about an even break. In the matter of losses, these cities took this ranking: Evansville, 8%; Indianapolis, 22%; South Bend, 35%; Hammond, 36%; Fort Wayne, 53.5%; Muncie, 70.9%; East Chicago, 74.78%; Terre Haute, 76.6%.

The official September building figures submitted from the various Indiana cities for the two years are:

City	1929	1928
East Chicago	$ 70,050	$ 277,786
Elkhart	84,445	48,373
Evansville	297,979	326,256
Fort Wayne	559,535	1,203,628
Gary	1,024,635	453,765
Hammond	226,200	355,200
Indianapolis	1,590,172	2,041,038
Kokomo	301,971	40,330
Michigan City	31,286	30,910
Muncie	55,430	231,726
Richmond	149,658	77,275
South Bend	536,320	833,400
Terre Haute	51,822	221,487
Totals	$4,979,503	$6,123,174

CONTRACTOR HOLDS THE BAG

Improved Construction Methods Have Netted Him Little Benefit

Building craftsmen and laborers together with the public have managed to secure all the benefits derived from improved construction methods according to a statistical study of wage levels and material prices just completed by the Associated General Contractors of America.

It is claimed that there has been no increase in profits to contractors through improvements in efficiency. In fact, information compiled by the association indicates that profits have been dwindling steadily during the past decade at a time when labor-saving devices and more ecenomical methods of construction have been making their greatest strides.

During July and August this year wage levels were stabilized at a new peak that brought basic wages to the level of the bonus payments made during the acute labor shortage of 1926. At that time competent men were given from one to three dollars per day more above agreed upon scales. The new index level for wages stands at 228, as compared with 100 for 1913.

It is pointed out that in sixteen years the basic wage rates in the construction industry have advanced 128 per cent, while during the same period, according to the Bureau of Labor Statistics of the Department of Labor, the cost of living has increased only 70 per cent.

According to this calculation construction labor today enjoys a 58-point increase in wages above the increase in the cost of living, a notable advance in prosperity for a group of workers which were numbered among the highest paid of skilled workmen even in 1913.

A similar study of the profits made by contractors reveals that they have been more generous to their employees than to themselves. The latest data on income of construction corporations that is available from Federal Income Tax agencies indicates that forty per cent of the incorporated contracting organizations are making no profit and that the aggregate profit of the entire industry is only 3.2 per cent. It is maintained, therefore, that while the introduction of mechanical aids in construction has made possible the increase in wage levels, the increased efficiency in management has not yet resulted in any similar gains for contractors. (Bulletin, Bldg. Construction Employers Ass'n., Chicago.)

TIME LOST, IS LOST

It Has Always Been So and Will Continue That Way, Arguments to the Contrary Notwithstanding

The international president of the Bridge and Structural Iron workers, is quoted as saying that the days that the Structural Iron workers were on strike in Chicago were not lost to them because the jobs all laid idle and that as soon as the strike was over the men resumed work at the some point they were working when they quit.

Quite so, but he does not take into consideration the fact that almost immediately after men did return to work the building public, owners and architects apperently quickly decided they were fully in accord with the contractors resisting increases in wages as not justifiable, by stopping going ahead with building projects they had figured to erect this year.

Chicago building permits according to reports for June and July have fallen off about 30 per cent. The greatest volume in construction activity being on large units of construction with no apparent prospect of these figures changing during the balance of the year.

During the past twelve months the Structural Iron workers have all been busy and it has been hard to get any good men at the union headquarters, even now it seems the union officials are unable to supply skilled men to meet the demand.

When the present jobs are finished what then are the prospects of iron workers and other trades who by the power of might increase the wages to such a rate as to compel owners to decide that now is not the time to build but that it would be best to lay low for future developments.

Any time lost by any building trades mechanics working by hour or day is lost. It has always been so and always will be. Some may try to fool themselves in the belief that they will get it back but they are only kidding themselves and not those who know the game. (Bulletin. Bldgf. Constn. Emplyrs.' Ass'n., Chicago.)

STATE BUILDING CONGRESS ADOPTS CONSTRUCTION RECORDER AS OFFICIAL PUBLICATION

Directors So Vote at a Recent Meeting

It is with a deep sense of appreciation of the recognition extended, the honor involved and the responsibility thereto attached, that the management of the Indiana Construction Recorder takes this occasion to announce to those of the State Building Industry that the publication has officially been designated as the official organ of the Indiana Building Congress.

This action was taken recently by the members of the executive board of the congress who unanimously adopted the following resolution:

WHEREAS, The Indiana Building Congress, an organization representative of the building industry of Indiana, feels the need of an official publication as a medium through which information may be transmitted to the members of the Congress, and

WHEREAS, the Indiana Construction Recorder, a weekly publication established for the past ten years as a medium of information to those connected with the building industry, has acquiesced in the request of the Indiana Building Congress to publish such information as may be furnished by the Congress from time to time as would be of interest to its members;

BE IT RESOLVED, the Board of Governors of the Indiana Building Congress endorse the Indiana Construction Recorder as the official paper of the Indiana Building Congress and request of Donald Campbell, editor of the Recorder, that this publication carry on the front cover, "Official Publication of the Indiana Building Congress," and

BE IT FURTHER RESOLVED, the Indiana Construction Recorder issue a publication the first Saturday of each month which will carry all the information of the Congress, and

BE IT FURTHER RESOLVED, that any information the Congress may have for publication, other than its regular monthly edition, may be inserted in the weekly edition, provided space can be made available, and

BE IT FURTHER RESOLVED, the Indiana Building Congress appoint an editorial committee to assist Mr. Campbell in the preparation of news matter for the monthly edition of the Recorder.

Backed up by such spirit, and with the knowledge that every assistance is to be extended to increase the reader interest, those of the Recorder naturally look forward to the future, offering as it does an opportunity to give to those of the Indiana building industry a bigger, better and more valuable publication than has been issued in the past.

It is gratifying to have the Recorder thus adopted, as it were, for the management of the paper has long been convinced that the interests of the building business can best be served through organization rightly conducted and directed. Past events and the relationships now existing in the Indiana building industry prove that contention.

It is an old story, but not so many years back there was little or no spirit of comrade among architects. Those out over the state did not know each other personally and few of those of the same cities could be assembled together for any sort of a meeting. This same thing held true relative to general and sub-contractors. Not only that but, split up as they were, each professional and business branch in the field more or less carried a chip on his shoulder for the other elements. There was apparently little or no consideration or sympathy for the other interest, or other individuals, for that matter, everyone was intent on "getting his," and all were apparently oblivious to the fact that most of the problems and troubles encountered were mutual to an important degreee.

Along about 1916, Indiana architects and contractors saw the light and, as a result, the Indiana Society of Architects and the Associated Building Contractors came into being the aim, on the one hand, being to protect the general interest of the architects and, on the other hand, the contractors. Several years of activity convinced that if any real constructive progress was to be made there must be not only individual interest co-operation but also co-operation of a collective nature. Ten years ago the collective scheme was instituted somewhat with fear and trembling, nor were many optimistic about it, all thought it a dream, a vision, a utopian idea hardly practical of execution. However, wonder of wonders, it took hold, it appealed, and men got behind the effort.

The influence of that idea spread to other fields of the building industry. The engineers and labor entered upon the schene and Purdue University sensing the importance of the new idea called a conference of the architects, contractors, engineers and representatives of labor at Lafayette. That was one of the first official recognitions of a united state building industry.

Continued activity along these co-operative lines by "The Big Four" resulted in the passage of a law creating the Administrative Building Council of Indiana, which is giving to the state standard building rules and regulations, virtually a state building code that will standardize to a great extent building requirements throughout Indiana.

And then out of it all has come the Indiana Building Congress, a body composed of practically all the allied interests in the state building industry. It is easy to contemplate what such a body can do for the industry and the individual if it is properly supported and ably handled.

The Recorder has seen all this take place, has had the gratification of recording all this progress step by step, and now having been named the official organ of the Indiana Building Congress stands ready to aid at all times, to lend its feeble efforts, to further this great work in which the builders of Indiana are engaged for the advancement of the industry.

JUST WHAT IS THE INDIANA BUILDING CONGRESS?

It Is an Organization Representative of the State Building Industry and Has Now Distinct Achievement to Its Credit

Indiana moves to the forefront among the states in the matter of seeking constructively to advance the building industry through an organization known as the "Indiana Building Congress," the only state building congress in the country. It is an organization with great possibilities in that it is composed of representative state associations of the various allied interests connected directly with building construction operations.

Membership in the Indiana Building Congress consists of state organizations allied with, or interested in the building construction industry in the state of Indiana, the individual members of each affiliated association are automatically members of the congress.

The active membership of the congress, representing about 36,000 members, is as follows:

Indiana Society of Architects;
Indiana Chapter American Institute of Architects;
Associated Building Contractors of Indiana;
Indiana Engineering Society;
Indiana Builders Supply Corporation;
Indiana Association of Electrical Contractors;
Indiana Society of Sanitary Engineers;
Indiana State Building Trades Council;
Indiana State Council of Carpenters;
Indiana State Association of Plumbers and Steamfitters;
Indiana State Masonry Conference;
Indiana Master Painters and Decorators Association;
Indiana Structural Steel Board of Trade.
Associate members:
National Lumber Manufacturers Association.

The Indiana Building Congress is the result of an intensified organization effort that has been going on in Indiana for a number of years. This effort centered on interesting the members of the varied allied interests in the need for professional and business association and closer co-operation, the aim being to create a better understanding that a common ground might be reached upon which all could meet for the solution of mutual problems and from which to launch constructive ideas that would, as a result, advance the interest of all those engaged in, or rallied with the Indiana Building Industry.

The public is not accustomed to think of the building industry as a whole, or as a complete organization, but rather to classify those engaged in building construction as architects, engineers, contractors, craftsmen, material supply and material producers, each having their own respective organizations that for years have been striving for better building and accomplishing much good, but largely within their own field of activities. The public has failed to profit completely because good ideas have lacked universal adoption. Again perfectly good proposals, intended solely for betterment in the art of building, are approved and then forgotten because they lack a plan or program to put them into operation. To intelligently plan for safe and sanitary construction and obtain it requires the co-operation of all these groups. Such a working organization is created by the Indiana Building Congress.

The incentive put into the scheme by the Indiana Society of Architects and the Associated Building Contractors of Indiana carried sufficient weight to where the Indiana Engineering Society, the State Building Trades Council and State Council of Carpenters felt the urge in the effort of co-operation. Thus the "Big Four" commonly referred to, drew recognition and succeeded in securing legislation that provided for the Administrative Building Council of Indiana, a body legally created by an act of the legislature that for the past five years has been engaged in compiling a set of rules and standards (minimum requirements) known as the State Building Rules and Regulations as a helpful source of information for the local officials of the state upon whom rest the responsibility for the safeguarding of the people of their communities, so that safe and sanitary construction may be a common practice fixed by authority which the public has a right to expect from the building industry.

But there are many other important subjects to be considered which need a central coordinating body in which all state associations interested in or allied with the building industry might participate, and the avenue open that seemed most feasaible was a State Building Congress upon which effort was centered with the organization of just such a body.

The purpose of the congress shall be to act as a clearing house for the building industry, and to promote the general welfare (1) by discovering through scientific surveys the needs of the public and of the industry; (2) by finding and recommending ways and means of satisfying those needs; (3) make such recommendations effective through existing state organized agencies, or through newly-created agencies where necessary, and (4) by defining group functions and harmonizing group activities through the formation of codes of practice for the industry, and by other means agreeable to and in the interests of the public and the industry and conformable to law.

The administration of the congress is divided into seven constituent groups with a board of governors represented by one member selected from each group that govern the congress and decide all questions coming before it from the standpoint of these various groups: They are: architects, engineers, building contractors, mechanical and sub-contractors, building trades craftsmen, material supply dealers and material manufacturers.

The Indiana Building Congress is sponsoring the trade show to be held in connection with the congress in the Manufacturers Building, State Fairgrounds, Indianapolis, Indiana, October 21st to 26th inclusive.

The purpose is to bring under one roof, material, tools and equipment of all kinds

used in the construction of buildings and houses. This exposition will be of the highest class possible, and equally beneficial and educational to those engaged in the industry, the exhibitors, and the public in general, all of whom are cordially invited to attend by invitations exchangeable for season passes.

During the Congress and Trade Show meetings will be held of the various constituent elements at which speakers of national prominence in the building industry will address these various groups.

The Indiana Building Congress sponsored and secured the passage of a law in the general assembly of 1929, providing for the registration of all architects practicing or offering to practice architecture in the state of Indiana, and was vitally interested and active in other legislative matters affecting the building industry.

This organization will sponsor a bill to be introduced in the general assembly of 1931, to provide for a more strict enforcement of the state building rules and regulations to provide for inspectors in cities not now having proper inspection of buildings; to provide for the qualifications, examination and registration of building contractors; also a bill to provide for the creation of commercial arbitration machinery for the speedy and economical adjustment of differences arising between members and others in the building industry.

ATTRACTIVE PROGRAM OFFERED TO STATE BUILDERS

Visitors to Congress and Trade Show Due for Pleasing Surprise When Events Get Underway

It's here!

The long-looked-forward to, anticipated and heralded event of events for the state building industry, the whole week session of the Indiana Building Congress and Trade Show, will open bright and early Monday morning, October 21, and continue through to Saturday night, October 26.

It has taken months of preparation to whip this affair into shape, to line up speakers and exhibits that will present to Indiana builders an attraction on a scale never before attempted in this state. First it is their show, for their benefit and for the benefit of the industry. The motive behind the sessions of the Congress and Trade Show was to develop a program that would bring together under one roof every element of any consequence in the building construction industry in Indiana and to present to those elements messages of vital import to the business individually and collectively, and, further, to bring to the attention of visitors, by means of an exposition, the very latest developments in building materials and equipment necessary to the successful pursuit of the business.

The official program as announced for the week will be as follows:

PROGRAM

INDIANA BUILDING CONGRESS AND TRADE SHOW

Manufacturers Building, State Fairgrounds Indianapolis, Indiana

MONDAY, OCTOBER 21ST

Indiana Building Congress and Edison Lights Golden Jubilee Day—Delegates and Members

10:00 A. M.—Registration—no fee charge.

10:30 A. M.—Convention of the Indiana Building Congress in session.

12:15 P. M.—Luncheon—Speaker, Mr. R. C. Rottger, "Edison Lights." Balance of day viewing exhibits at trade show.

TUESDAY, OCTOBER 22ND

Contractors Day

10:00 A. M.—Registration—no fee charge.

10:30 A. M.—Convention of Building Contractors in session. Guests and speakers.

10:30 A. M.—Mr. W. J. Weesner, The Indiana Bell Telephone Company.

10:45 A. M.—Mr. R. J. Kimbell, Washington, D. C., Director Architectural and Building Code Bureau, Lumber Manufacturers' Association, Washington, D. C.

11:15 A. M.—Mr. Oscar W. Rosenthol, Chicago, Illinois, President Associated Building Contractors of Illinois, Member of Board of Directors, National Home Modernizing Bureau.

12:15 P. M.—Luncheon. Balance of day viewing exhibits at Trade Show.

WEDNESDAY, OCTOBER 23RD

Architects and Engineers Day

Indiana Chapter American Institute of Architects.
Indiana Society of Architects.
Evansville Society of Architects.
Lake County Society of Architects.
Fort Wayne Society of Architects.
Indianapolis Architectural Club.
Indiana Society of Engineers.

9:00 A. M.—Meet at the New Scottish Rite Cathedral for conducted tour of the building.

10:00 A. M.—Registration at Manufacturers building, fairgrounds. No fee charge.

10:30 A. M.—Conventions of Architects and Engineers in session. Guests and speakers. "Heating and Ventilating" by Mr. E. Langenburg, St. Louis, Mo., past president, National Warm Air Heating Association, vice-chairman of the Committee on Research of the American Society of Heating and Ventilating Engineers. "The Modern Quest" by W. J. Weesner, Indianapolis, Indiana, engineer, Indiana Bell Telephone Company. "Indiana Architectural Act," general discussion.

12:00 Noon—Luncheon at Manufacturers Building. "Relationship of Architect and Engineer" by Mr. L. W. Wallace, secretary, American Engineering Council.

1 to 5 P. M.—Viewing exhibits at Trade Show.

5 to 6 P. M.—Open house at the new Architects' building, 333 N. Pennsylvania street.

7:00 P. M.—Banquet at Manufacturers Building, Fairgrounds. Speaker, Dr. Allen Albert, assistant to president of the Chicago World's Fair, 1933, on "The Chicago World's Fair."

THURSDAY, OCTOBER 24TH

Indianapolis Building Congress Day

11:30 A. M.—Craftsmanship award on Third Church of Christ, Scientist, 34th street and Washington boulevard.

12:00 Noon—Registration at Manufacturers Building, State Fairgrounds. No fee charge.

12:15 P. M.—Luncheon at Manufacturers Building, Fairgrounds. Speaker, Mr. William O. Ludlow, prominent New York City architect and chairman of the committee for Recognition of Craftsmanship of the New York York Building Congress. Balance of day viewing exhibits at Trade Show.

FRIDAY, OCTOBER 25

Indiana Builders Supply Dealers and Manufacturers Day

10:00 A. M.—Registration—no fee charge.

10:30 A. M.—Conventions of building supply dealers and manufacturers.

11:00 A. M.—Speaker, Mr. Frank Dunning, secretary and manager, National Builders Supply Association, Cleveland, Ohio.

12:00 Noon—Luncheon. Balance of day viewing exhibits at Trade Show.

(Continued on Page 7, Col. 1)

SATURDAY, OCTOBER 26TH
Craftsmen's Day

10:00 A. M.—Registration—no fee charge.

10:30 A. M.—Convention and session. Guests and speakers. Bernard Johnson, vice-president, Bricklayers, Masons and Plasterers International Union of America, Washington, D. C.

11:15 A. M.—Frank Duffey, secretary United Brotherhood of Carpenters and Joiners of America, Indianapolis, Indiana.

12:00 Noon—Luncheon. Balance of day viewing exhibits at Building Trade Show.

STRANGE SUBMERSION ENGULFS THE ARCHITECT

Creator of Those Things That Best Reflect the Stories of the Ages Usually Forgotten, Ignored

It is a strange anomally that a something should take its place as one of the most potent influences in the making and marking of history, and yet the creators of this something should be so little known, and not at all understood as an influential unit of society.

Such is, however, the situation with reference to architecture and architects. Architecture has blazed an unmistakable path through the pages of history, each epoch of history being marked by a coincident period or style of architecture. The splendor of the Egyptian Dynasties and the slavery which accompanied it can be read in the glorious Temple of Karnak, and the grimly impressive Pyramids. The beauties, and the love of physical perfection which was the fetish of the Greeks, are seen in the perfect architecture which crowned the Acropolis. Rome in her pagan majesty is read on the Capitoline Hill and in the Colosseum. The Middle Ages in its great upreaching toward religious expression and its accompanying sin of surfdom is vividly illustrated by the gothic of its churches and its castles. And then following the Dark Ages, man's rebirth of mind and soul is brightly written in the playful happy architecture of the Renaissance.

And so through the story of the people of all ages down to the present moment when the story of our own age of steel and stone and elevators and industry is just commencing to be written in the most magnificent and startling architectural age of all history. And our own country, which architecturally speaking, has been buffeted about by the winds of precedent, or been becalmed in the doldrums of a lack of inspiration, is about to ride the high seas of leadership of the world in architecture.

But what of the architect? Except for a few outstanding examples, he has been forgotten. Even in our present age, only extraordinary publicity artists are able to keep their names prominently before the public. Is this equally true of the architect as a group? Is his importance and his significance, as an element in our business and social life, fully appreciated? We think it is. The people see, feel and breathe architecture every moment they live. It's impact is felt in everything we do or see. Architecture is constantly giving us a happy sensation or a disturbed unpleasantness; and we do not admit that this is possible without the public giving the creator of the sensation a distinct place in the scheme of things.

The law, however, is slow to give the same recognition which society gives. We feel, therefore, that the state of Indiana has taken a decidedly forward step in the last session of its general assembly, by giving due recognition to the architect as a person of prime importance to the health and happiness of its people. For in passing, the Architects' Registration Law that is exactly what the general assembly did. The law of which we speak was designed as a measure to protect life.

The general assembly said in effect, that in order to design a building structurally safe to withstand the push and pull of applied loads, and the elements; that a mind trained in the theories of the stress and the strain of all of the structural elements that go into the safe construction of a building was essential—thus an architect. The general assembly said that in order for the people of the state to live and work, and enjoy themselves under conditions of health and safety, that minds trained in the technical and practical requisites of sanitation and fire, safety, etc., etc., were essential—thus an architect. And we feel also that the general assembly which is not entirely devoid of sentiment and the love of the beautiful, said in its heart that the people of its state should enjoy man-made masterpieces; that their lives should be made happier and more cheerful by the beauties of their architectural surroundings—thus the architect.

For you should not be deceived. The ability to creat real architectural beauty is the result of years and years and years of training and constant study and persistent association with things beautiful, and it is not something which can be acquired in a moment as one may need it. In short, a contractor acquainted with the methods of construction, or a good housewife familiar with the details of housekeeping are neither of them equipped with the training it takes to create a beautiful house. You have undoubtedly seen the small child equipped with a feeling for music, whose fingers dance in a sort of time over the piano keys and yet she can not create beauty with the instrument. The latent possibilities are there, but it takes years and years of constant training and application among the world's music masterpieces before the child can create beautiful music. How much more true it is, that the creation of real beauty in dimension and color, should require intense training before one is qualified to create something pleasant for our people to look at every day. And so we have a feeling that this is a truth which the assembly appreciated.

And so the architect takes his place in the law; and here is how he is defined, "Any one, or any combination of the following practices by a person shall constitute the practice of architecture, namely: The planning, designing, specifying, or supervision of the erection, enlargement or alteration of any building or buildings, or any part thereof, to be constructed for others."

And what is going to be the result of protecting the name of architect? We have already indicated it in what has gone before. Indiana, with the rest of the states is to have its share in writing the tremendous history of this era in enduring beauty of home and office and factory and school and church, etc., etc. It was a general assembly far-sighted for the health and safety of the citizenship which made architectural registration a law. But more particularly it was a general assembly which saw far into the future happiness of its people by providing for them permanent bits of architectural beauty to constantly cheer them.

EDUCATIONAL

The following program has been arranged by the Portland Cement Association, and will be of interest to architects, building contractors, material supply dealers, and craftsmen. The program will be handled by specialists of the Association who have had wide experience in the subjects they will discuss.

Monday, October 21

General Session.—Problems and Developments of the Building Industry. Subject presented by L. C. Miller, District Engineer.

Tuesday, October 22

General Contractors.—Discussion of the water-cement ratio specifications for, and methods of, proportioning concrete. Heavy Duty Concrete Floor Finishes. Subject to be discussed by J. F. Hough, Structural Bureau.

Wednesday, October 23

Architects and Engineers.—Field Control of the Quality of Concrete Under the Water-Cement Ratio Specifications. Subject to be presented by J. F. Hough, Structural Bureau.

Thursday, October 24

Indianapolis Building Congress.—A discussion of the proposed uniform Building Code for cities of Indiana with general reference to the A. C. I., building regulations and advantages of Standard Building Codes in general, to be handled by Norman H. Stineman of the Structural Board.

Friday, October 25

Dealers and Sub-Contractors.—New Markets for the Concrete Contractor; Fire-Safe First Floors in Dwellings; Driveways; Concrete Around the Home. Subject to be presented by E. G. Lantz, Cement Products Bureau.

Saturday, October 26

Crafts.—Fundamentals of Good Stucco Work, with demonstration. Presented by C. G. Walker, Cement Products Bureau.

INDIANA BUILDING CONGRESS TRADE SHOW

Manufacturers Building **State Fair Grounds**

STANDARD CLAUSE OF AMERICAN ARBITRATION ASSN. ADOPTED

Los Angeles Builders' Exchange Acts

The standard clause of the American Arbitration Association has been adopted for the first time by a major building exchange or congress in the recently announced action of the Los Angeles Building Exchange. The clause makes mandatory the settlement of all disputes between members or between members and clients by submission to expert business judgment rather than recourse to litigation.

A warning, "Safeguarding Business Contracts," issued by J. Roydon Estey, master of the arbitration tribunal of the builder's congress of Los Angeles, which was praised by Lucius R. Eastman, president of the American Arbitration Association, at 521 Fifth avenue, New York city, called specific attention to the clause.

"Having proposed or suggested all the safeguards possible to prevent disagreement in making contracts," the warning read, "the builder's exchange offers the last and final safeguard to prevent, and a solution to solve, the problem where disagreement has crept in despite careful preventatives. Instead of rushing to courts of law with their long, expensive and goodwill destroying results, we advise the use of our arbitration tribunal, established for the purpose. The following resume of arbitration and how to use it should be carefully studied and then put into practice.

"Provide for the prompt, economical and binding settlement of disputes arising out of the performance of contracts or business agreements by inserting in such instruments the following clause:

'Any controversy or claim arising out of or relating to this contract, or for the breach thereof, shall be settled by arbitration in accordance with the laws of the state of California, under the rules of the American Arbitration Association, and judgment may be entered on the award in any court having jurisdiction.'

"An arbitration clause provides for the arbitration of a future dispute (labor not included), and is intended to assure the parties against litigation or delayed settlement when a dispute subsequently arises. An arbitration clause is valid, irrevocable and enforceable in the state of California. By 'enforceable' is meant that the Superior Courts of the state will require the arbitration to proceed and will stay any suit or proceeding brought in violation of the agreement. By 'irrevocable' is meant that the arbitration agreement can not be revoked at the will of one party, but only upon such grounds as exist at law or in equity for the revocation of any contract.

"The presence of an arbitration clause in a contract frequently prevents disputes from arising. Experience has proved that when parties know that the matter in issue is to be judged by an unbiased expert in the trade in which the disputee arises, and without delay, such knowledge tends to reduce the number of trivial or ill-founded claims, which might have a chance with a jury or by reason of a resort to legal technicalities or claims made to delay the payment of the obligation. If a contract or agreement does not contain an arbitration clause, one of the parties to a subsequent dispute can not compel the other to arbitrate the issue if he does not wish to.

"Arbitrations are conducted in tribunals (informal courts). The proceedings are called hearings and the judgment or findings of the arbitrator an award.

"The American Arbitration Association is the recognized authority in such matters, and its rules of procedure are generally acceptable to all parties.

"The award of an arbitrator in the state has all the force and effect of a superior court judgment; and can be recorded and dealt with in like manner.

"The total cost of an arbitration is usually but a small part of the expense involved in the trial of a similar action in court, while the time involved is ordinarily but a matter of days.

"The builder's exchange of Los Angeles, located in the chamber of commerce building, maintains an arbitration tribunal that is open to the public without respect to trade or affiliation. Here advice and counsel on arbitration matters are given without charge. The tribunal is presided over by J. Royden Estey, a member of the National Panel of Arbitrators of the American Arbitration Association, and one who is well equipped by experience and knowledge to direct the work of this important program."

Although the Los Angeles exchange is the first to adopt the standard clause of the American Arbitration Association, it is not the first to establish equitable and irrevocable arbitration rules. Among those congresses and exchanges which have established rules peculiar to their respective needs in conjunction with the association are the New York, Philadelphia, and Indianapolis building congresses. The experience of each, as set forth in their periodical reports, indicate a material saving in time required for a final determination of issues involved; a speedier freeing of frozen assets in construction controversies; an appreciable saving in moneys heretofore spent in litigation; a great respect for the ethics of the industry on the part of the public, and an increased friendliness and mutual confidence among members.

FIVE-DAY WORKING WEEK NOT UNIVERSAL IN BUILDING FIELD

So General Survey Shows

In gathering the wage data for the 1929 wage scale compiled by the Builders Association of Chicago, 175 cities were solicited. Practically all of the 175 made returns. Only cities of 50,000 or more were canvassed. The survey revealed that 42 of these 175 cities had the five-day week. One should not be led into the mistaken belief that the 5-day week is in effect among all building trades in these 42 cities. This is not the case. In a number of these 42 cities one or more building trades have the five-day week. The exceptions are New York City, Cleveland, Pittsburgh, St. Louis, Atlantic City, Elizabeth, Birmingham, Hammond and two or three others where the 5-day week is effective among all building trades. Another fact is borne out that in some of these 42 cities, the 5-day week is the custom only during the summer season and not maintained throughout the year. This is prevalent among Pacific coast cities where both open and closed shop conditions prevail. Under these circumstances they could not be included among those permanently established.

It is reported by several news agencies that the membership of the New York Building Trades Council is 150,000. This estimate appears to conflict with the list of industrial organizations crediting the New York body with a membership of 116,000. It is expected that at the convention of the Building Trades department to be held at Toronto during October that their annual report will show some one million tradesman affiliated through their various international organizations. From statistics at hand some 200,000 or less tradesmen have the 5-day week throughout the United States. This would comprise about 20 per cent of the Building Trades department membership.

The claim by a certain company that 300 cities and towns now have the five-day week appears to be out of line. If the Builders Association survey were to include cities and towns of 5,000 or upwards in population, it is to be admitted that a certain few of those cities under 50,000 would also have the five day week. Anyway, it is difficult to conceive when all of these cities and towns have been combed that a total of 300 would be arrived at, considering that only 42 were shown in cities where a population of 50,000 or more was shown, though as stated in our previous issue the Plasterers and Painters, even in small open shop towns ,appear to be well organized and to have secured the five-day week in part. (Monthly Bulletin, Bldg., Construction Employers Ass'n., Chicago, Ill.)

WE ARE PLEASED TO ANNOUNCE THE FORMATION OF THE

Engineering Metal Products Corporation

311 East South Street, Indianapolis, Ind.

A Consolidation of

CENTRAL WIRE AND IRON WORKS, Est. 1910
DIAMOND WIRE AND IRON WORKS, Est. 1910
T. ROCH IRON WORKS, Est. 1884
JAS. H. CARNINE CO., Est. 1921

ENGINEERING SERVICE BY REGISTERED ENGINEERS

Our combined facilities will enable us to serve you more efficiently. We can give you a complete bid on all metal requirements as listed below.

Design, Fabrication and Erection of

Ornamental Iron
Miscellaneous Iron
Steel Stairs
Fire Escapes
Elevator Doors
Sidewalk Doors
Ash Doors
Area Grates
Collapsible Gates
Flag Poles
Wire Guards and Partitions
Grilles and Wickets
Railings and Balconies
Steel Plate Work

Sales Representatives for

Hollow Metal Elevator Doors
Hollow Metal Swing Doors and Frames
Tin Clad and Kalomine Doors
Rolling Steel Doors
Ornamental Bronze and Cast Iron
Office and Toilet Partitions
Steel Sash—Heavy, Medium and Residence Casement
Steel Joist
Metal Forms for Reinforced Concrete
Metal Trim and Specialties
Hollow Metal Windows
Chain Link Fencing
Ash Hoist Equipment
Mitco Steel Grating

Warehouse service on the following building materials: Reinforcing Steel, Wire Mesh, Metal Lath, Corner Bead, Cold Rolled Channels, Wall Ties, Factory Steel Sash, Floor Clips, Floor Hardener, Waterproofing, Etc.

A DAY OF DAYS FOR INDIANA ARCHITECTS

Much Activity Planned for October 23 at the Trade Show at State Fair Grounds, Indianapolis

It's going to be a big day for Indiana Architects and Indiana Architecture. It's a day in which every member of the profession, and those engaged therein, should make every effort to participate. It's a day especially heralded throughout the state to all who read as "Architects and Engineers Day" at the Indiana Building Congress and Trade Show at the State Fairgrounds, Indianapolis, Wednesday, October 23.

These two important professional branches of the great building construction industry, each a constituent part of the Indiana Building Congress, have been honored by having a special day at the Trade Show designated as theirs. It is the first time at any big state-wide event that the architectural profession of Indiana has been so singled out and made to stand before the public as a whole. That fact alone ought to impress every Indiana architect and move him to lend his presence to the occasion. Every Hoosier architect, out of pride for his profession should feel a compelling urge to identify himself with this event. All personalities, and they are a thorn in the side of a united architectural profession, it must be admitted, should be cast aside for this day to make the event the most outstanding, representative, assemblage of Indiana architects in the history of Hoosierdom.

It is no easy matter to drop business, consume time in traveling miles, just to attend some function, but this is a special function, it focuses the spotlight on architecture. Others will be watching to see how the architects respond and by that response will guage the spirit of the profession as a whole. The late Theodore Roosevelt said, "Every man owes part of his time to the advancement of the profession to which he belongs." If that be so, and few will deny it, no time the Indiana Architect could offer would assay more in that respect than the time he devotes toward making October 23, "Architect's Day" a success.

However, in return for the effort expended, there will be something given back to the architect. In the first place the Trade Show will be a revelation to all visiting architects as it will be a comprehensive exhibit of displays of all the latest in building supply materials, appliances and equipment. Also, there will be interesting demonstrations of the uses of materials and methods of construction, together with trade talks by experts.

A special program for the day, too, has been arranged in the way of inspection tours, business sessions and instructive talks concerning architecture and subjects allied with it.

The program for the day as announced in advance is to be:

9:00 A. M.

Meet at the New Scottish Rite Cathedral for conducted tour of the building.

10:00 A. M.

Registration at Manufacturers Building, Fairgrounds. No fee charge.

10:30 A. M.

Conventions of Architects and Engineers in session. Guests and Speakers. "Heating and Ventilating" by Mr. E. Langenberg, St. Louis, Missouri, past president National Warm Air Heating Association, vice-chairman of the Committee on Research of the American Society of Heating and Ventilating Engineers. "The Modern Quest" by W. J. Weesner, Indianapolis, Indiana, engineer, Indiana Bell Telephone Company.

12:00 Noon

Luncheon at Manufacturers Building. "Relationship of Architect and Engineer" by Mr. L. W. Wallace, secretary, American Engineering Council.

1 to 5 P. M.

Viewing of exhibits at Trade Show.

5 to 6 P. M.

Open house at the New Architects Building, 333 N. Pennsylvania street.

7:00 P. M.

Banquet at Manufacturers Building, Fairgrounds. Speaker, Dr. Allen Albert, assistant to President of the Chicago World's Fair, 1933, on "The Chicago World's Fair,"

Remember! This is your day. What will you make of it?

CHAMPIONS THE ARCHITECT

Prime Minister of Great Britain in Radio Farewell Stresses Need for Architect

Over "the air" the other night there sounded words that aroused gratifications, that thrilled, and gave to those who heard some idea of how the function of the architect is regarded "across the water," the need that is felt for him. Possibly many of you Indiana architects who were "listening in" heard, thrilled, and hoped the great American public noted those few passages that said so much.

Prime Minister Ramsey MacDonald of Great Britain was sounding his farewell to the American people in a speecn that left no room to doubt his sincerity. His every word indicated his earnestness, it seemed he was putting his whole soul into his message in his endeavor to convince his auditors. He told of his efforts of the previous days, of how he and President Hoover had discussed preliminaries in an effort to effect world peace. "It is a great task," he said, "we are but preparing the plans, we are but the architects of this structure we have in mind. It is a noble structure and, like all such, must have its architect if it is to arise in beauty and majesty and is to endure. There must be an architect to plan if a structure is to be great. Nothing worth while, of any note, was ever built without an architect."

Considering the man, his position, the interest he aroused, the thousands, probably hundreds of thousands, who listened to him, it is our impression that that was the most far reaching direct message ever sounded for the architectural profession.

INDIANAPOLIS

***Children's Guardian Home** (addition): $160,000.00, 2-stys. and bas., 5751 University avenue, Indianapolis. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Owner, Marion County Board of Commissioners; Harry Dunn, auditor, Court House. Receiving bids to 10 o'clock a. m., Wednesday, November 13th. Brick, reinforced concrete construction, composition built-up roof, new steam heating system, face brick, common brick, cinder block, smoke stack, hollow tile, cut stone, structural steel, reinforcing steel, steel stairs, suspended ceiling, metal ceiling, steel and wood sash, maple flooring, blackboards, millwork, showers and toilet partitions, hardware, skylights, ventilators, waterproofing, two 125-H. P. steel boilers, stokers, radiators, boiler feed pump, metal weatherstrips, screens, vent fans, vacuum pump, bath tubs, showers, hot water heater, storage water tank, fire door, metal door frames, asphalt tile flooring, terrazzo floors, laundry machinery, washer, dryer, water softener. Will include two additions to main building and new boiler house. Will give listing of bidders next week.

***Master Service Station:** $75,000.00, 1-sty. and bas., Union and Mulberry streets, Kokomo. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, Firestone Tire and Rubber Company, Akron, Ohio. Bids in under advisement.

***Shelter and Bath House:** $75,000.00, Dunes State Park, LaPorte county, Indiana. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, State of Indiana, Department of Conservation, Richard Lieber, director, State House, Indianapolis. Starting work; general contractor, Mustard-Curry Building Corporation, Bloomington. Architect is receiving bids now on the plumbing, heating and electrical wiring. A $5.00 deposit on plans is required. The following are figuring the plumbing and heating: Gary Plumbing and Heating Company, Gary; C. H. Malony, Gary; General Engineering and Sales Company, Hammond. The following are figuring the electrical wiring: Lighthouse Electric Company, Gary; Gary Electric Company, Gary; H. H. Bartels, Chesterton; O'Connor Electric Company, North Liberty.

***Church** (superstructure) **Building:** $65,000.00, 2-stys. and bas., 64x120, 50 North Rural street, Indianapolis. Archt., George V. Bedell, 17 Aetna Trust Bldg., Indianapolis. Owner, Englewood Christian church; Rev. O. A. Trinkle, pastor, 59 North Rural street; O. N. Shirley, on the building committee, 3168 Fall Creek boulevard. Bids in under advisement; no low bidder. Brick, stone trim, slate or asbestas shingle roof, structural steel, wood joist on steel frame, art glass, wood sash, hardwood floors, steam heating plant, plumbing, electrical fixtures, pipe organ, pews, tile baptistry, balcony, Sunday school rooms. Foundation now in; bids to be for superstructure only.

***Consolidated Grade School Building:** $45,000.00, 1-sty., 75x125, Hamilton county, Wayne township. Archt., Norman H. Hill, 1050 North Delaware street, Indianapolis. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Charles Boden, trustee, Noblesville. Receiving bids to 10 o'clock a. m., Saturday, November 9th. (SEE LEGAL ADVERTISEMENT IN THIS ISSUE.) Brick, stone trim, steam heating plant, composition built-up roof, plumbing, electrical wiring.

Consolidated Township Grade School Building: $40,000.00, 1-sty. and bas., Van Buren township, Shelby county. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, Frank E. Rohm, trustee, Rural Route 2, Shelbyville. Architect selected; probably will mature soon. Brick, concrete and steel construction.

Park Pavilion (remodeling): 1-sty., Donner park, Columbus. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, City of Columbus, Park Board, City Hall, Columbus. Plans in progress. Work consists of new tile roof, stuccoing exterior walls, general remodeling.

Residence (remodeling): 2-stys. and bas., Brownstown. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, Joseph M. Robertson, Brownstown. Plans completed; owner will award subcontracts. Work consists of brick veneering present frame building, tile roof, remodeling second story.

***Church Building** (alterations): 1-sty. and bas., 32x35, South Adams street, Marion. Archt., W. H. Garns and Son, 1319 Fletcher Trust Bldg., Indianapolis. Owner, Methodist Church Congregation; Rev. J. R. Stanton, pastor, Marion. Receiving bids to 12 o'clock, noon, Wednesday, November 6th. Work consists of brick veneering present frame structure, new asbestos shingle roof, changing steam heating system, new floors. Additional bidders on the general contract are, F. O. Fort, 5445 Julian avenue, Indianapolis; C. L. Hayes, Morristown.

***City Hall Building** (new heating system): Elwood, Indiana. Mech. Engr., Walter Breining, 909 Roosevelt Bldg., Indianapolis. Owner, City of Elwood, Charles H. Foster, mayor; Florence E. Austill, city clerk, city hall, Elwood. Receiving bids to 8 o'clock p. m., Monday, October 21st. (SEE LEGAL ADVERTISEMENT IN THIS ISSUE.) Work consists of installing a new steam heating system

STEEL INSURES STRENGTH AND SECURITY

The Indiana Avenue bridge over Fall Creek in Indianapolis. Built in 1899. Structural steel frame allows complete alteration to modernize flooring.

To Leap The Flo

Highways of metal . . . bridges of steel — more immense . . . more defiant of the impossible do they become every year. Steel has strength, safety, security . . . and time cannot destroy them. Steel lends courage to design, inspiration to imagination. Steel is most adaptable, most flexible. A steel bridge not only offers greater artistic possibilities but provides the kind of structure that can always be kept secure . . . modernized, reinforced, altered—even removed with speed and economy.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

dge over Geneso River at Wellsville, N. Y., showing beauty and grace of steel. Fabricated by a member of the Indiana Structural Steel Board of Trade.

d Tie The Shores

Steel has such ready adaptability, such preparedness for its duty, that a steel bridge can be erected faster, with less handling of material, with less regard for weather than is required when any other material is used. Steel's quick suitability, its efficient fitness, recommend it for economy. Its versatility makes steel the first consideration where beauty is a factor.

Sealed Proposals

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of Wayne township, Hamilton county, Indiana, will receive bids at the office of the township trustee, in the present school building, Durbin, Indiana, until 10 o'clock a. m. of Saturday, November 9, 1929, for the erection and completion of the general construction of a one-story grade school building to be erected on a site near Durbin, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage and electric wiring for the said building, in accordance with the plans and specifications prepared by Norman H. Hill, architect and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect and the State Board of Accounts. The estimated cost of such work is $40,000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the State Board of Accounts and sealed and in every respect must conform to the laws of the State of Indiana and to the rules and regulations of any governing State Board of the State of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Wayne School Township, Hamilton county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute surety bond for the full amount of his bid, approved by the trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them after the contract has been awarded.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract, drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 North Delaware street, Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of the J. M. Rotz Engineering Company, 704 Merchants Bank Building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be return to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

CHARLES BODEN,
Trustee.
GEORGE E. SHANK,
GEORGE F. JERRELL,
ARTHUR HOSMER,
Advisory Board.

Gentry, Cloe & Campbell, Attorneys.

School building in Aurora, Dearborn county, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects and engineers, Connersville, Indiana. Plans may be had by all general contractors and mechanical contractors from the architect and engineer at Connersville, Indiana, upon depositing $25.00 to assure the safe return of the plans and the filing of a bona fide bid. The full amount of the deposit will be returned providing bids are filed on the day of letting and plans are returned on or before that date. Plans and specifications have been adopted and approved by the building company, and various boards of the state of Indiana, excepting the state board of accounts.

Plans and specifications are now on file in the office of the North School building, in the office of the state board of accounts and in the office of the architects and engineers, at Connersville, Indiana.

CITY HALL
NOTICE TO CONTRACTORS

Notice is hereby given by the Common Council of the City of Elwood, Indiana, that it will on Monday, October 21st, 1929, at, eight o'clock P. M., at the Council Chamber in the City of Elwood, Indiana, receive sealed bids, for the installation of a heating system in the City Building in said city, according to the plans and specifications prepared by Mr. Walter Breining, 909 Roosevelt Building, Indianapolis. Plans and specifications have been approved by the said Common Council.

Plans and specifications are now on file and may be seen in the office of the city clerk of the City of Elwood, in the office of the State Board of Accounts, and in the office of the mechanical engineer.

All bids must be submitted in writing on Forms Number 96 and 96A. The Common Council reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three (3%) percent of amount of bid; checks made payable to the City of Elwood, Indiana, to be held by said city as a guarantee of good faith, and that the successful bidder will execute a contract and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contract will be returned within ten days.

Should the successful bidder fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check as liquidated damages.

CHARLES H. FOSTER,
Mayor, City of Elwood, Indiana.

Florence E. Austill, Clerk.

Herman F. Willkie, City Attorney.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,

Of Indiana Construction Recorder (Insert title of publication) published weekly (State frequency of issue.) at Indianapolis, Indiana, (Name of post office and State where publication is entered) for October 1, 1929. (State whether for April 1 or October 1.)

State of Indiana,
County of Marion, ss.

Before me, a notary in and for the State and county aforesaid, personally appeared Donald Campbell, who, having been duly sworn according to law, deposes and says that he is the publisher (State whether editor, publisher, business manager, or owner.) of the Indiana Construction Recorder (Insert title of publication.) and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of— Post office address—

Publisher, Donald Campbell, 313 East Market St., Indianapolis, Ind.

Editor, Donald Campbell, 313 East Market St. Indianapolis, Ind.

Managing Editor, None.

Business Managers, Donald Campbell, 313 East Market St., Indianapolis, Ind.

2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.)

Donald Campbell, 313 East Market St., Indianapapolis, Ind.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is... (This information is required from daily publications only.)

DONALD CAMPBELL.
((Signature of Publisher.)

Sworn to and subscribed before me this 1st day of October, 1929.

(SEAL) BLANCHE BILLS.

(My commission expires April 23, 1931.)

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

The success or failure of a heating installation depends upon getting the right boiler. Next to efficiency, the matter of economy is an important point. PROX BOILERS are built for economical service and lasting satisfaction. They are so constructed that the maximum number of heat units are generated from every shovelful of coal consumed.

PROX HOT BLAST SMOKELESS BOILERS
Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood

Capacities—800 sq. ft. to 25,000 sq. ft. steam

CONTINUED RECESSION IN NEW BUILDING OPERATIONS THROUGHOUT THE COUNTY REVEALED

September Total Falls Short of August's and Also Runs Behind That of Corresponding Period a Year Ago

Building figures covering new construction operations over the country during September, just past, were without any special significance, except they continued to indicate the downward trend of activities that has been prevalent for several months. This conclusion and situation is arrived at in drawing comparisons from a nation-wide survey furnished by S. W. Straus & Co., building financiers. The figures from which comparisons were made were taken from reports submitted by building inspection department officials of 596 leading cities and towns throughout the country.

The total building permits issued by the above municipalities in September carried an estimated valuation of $218,344,506 compared with $251,193,426 posted for the corresponding period a year ago, a decline of 20%. Also the September total showed a 13% recession from the August, 1929, volume.

A study of the reports reveals that the losses were fairly well scattered throughout the country with no acute falling off in any particular section. To a large extent the decline is in the smaller types of construction.

The figures mark the fifth consecutive month that the Straus Survey has revealed losses in the volume of building permits in the leading centers of the country. As compared with the same months a year ago, the loss in May was 19%, in June 29%, in July 13% and in August it was 18%.

It is to be noted that the decline in the largest centers of population was somewhat greater than in the smaller cities. For example, building permits issued in the fifteen largest cities totaled $96,920,607 compared with $136,107,473 in September, 1928, a loss of 29%. The heaviest falling off in this group was in New York, Chicago, Philadelphia, Boston and Baltimore.

In the matter of territorial gains, where they did appear, the mid-west made the best showing, five of the total thirteen states, in the matter of increases, were located in this section of the country. Two states in the East, three in the South and three in the West showed gains over the September, 1928, figures. As for comparisons with the August building volumes, fifteen of the states showed increased business but the thirty-three recording declines rolled up a deficit which the more fortunate sections were unable to offset.

In the face of the general result, it should be gratifying to Hoosiers that Indiana ranked in among the twelve states showing the best building returns in September and Indianapolis edged into the select twenty-five cities class.

Building Materials

The falling off in building activity during the past month was reflected to some extent in the cost of building materials. Portland cement which has been weak for some time, experienced further declines of from 10 to 20 cents per barrel. Towards the end of the month there was a slight easing in the price of structural steel shapes and bars especially at the Pittsburgh mills. No change was reported in common brick and lumber.

Labor Conditions

Declines in construction volume are tending to increase unemployment which is not being off-set by the five-day week in the cities where this short week plan is in operation. For the month a few advances in wages are reported, particularly a ten per cent increase in New York City. Boston steamfitters and plumbers have been advanced from $1.37½ per hour to $1.50. Indications are that wages are now near the high point of 1920, except that nine year ago high wages were in large part due to an inflated currency.

Considerable jurisdictional trouble has been experienced in Boston and appeals have been taken to the Building Trades Department of the American Federation of Labor to seek relief which, if satisfactorily granted, may establish a precedent for jurisdictional difficulties in other parts of the country.

MASON CONTRACTORS OF INDIANAPOLIS JOLLIFY AGAIN

Famed Annual Outing and Chicken Dinner Held Last Week

Considerable observation and experimentation on the part of the members of the Indianapolis Mason Contractors Association has led them to the conclusion that, when the frost begins to settle on the pumpkin, the fodder is stacked away in shocks and the bright full moon goes sailing through the autumn skies, there is no finer time on all the calendar in which to partake of sizzling, well-browned, fried chicken. And, having reached that conclusion, they, by proper procedure—committee work, resolution and unanimous vote—have instituted into their organization an annual custom, that of taking themselves, their wives, their children and a few selected "lucky ducks" out into the rural districts there to feast on the object of their discovery.

Hence it was that the mason contractors of the Hoosier Capital City, accompanied by their folks and friends, hied away to New Bethel, Indiana, last Saturday evening, October 19, and arriving there turned to their right, streaked it down a little country road, veered to the left and drew up for a stop at Johnny Mann's place, a country homestead noted for the chicken dinners served there.

When the crowd had all assembled there were close to sixty in the crowd. Everyone was bubbling over with enthusiasm and anticipation which was not the least diminished by the aromatic whiffs that drifted from toward the kitchen, in fact, those appetizing scented breezes served to accentuate the ill-concealed eagerness with which every one listened for the dinner bell. Then came the welcomed notes ringing clear, out into the autumnal even-

ARCHITECTS DAY A BIG FEATURE AT STATE BUILDING CONGRESS EVENT AT INDIANAPOLIS

Very Fine Program Offered

Architects from Indianapolis and out in the state to the number of fifty-seven, representatives of six national, state and regional architectural professional organizations, together with a number of engineers, members of the Indiana Engineering Society, turned out Wednesday, October 23, to make Architects and Engineers Day at the Indiana Building Congress and Trade Show one of the most interesting of the Special Days events at the big building affair held at the State Fair Grounds at Indianapolis the past week.

This was a good showing when one considers the terrible weather conditions that prevailed, snow and rain impelled by high winds alternating throughout the day and even into the night. The wonder is that any of the architects from outstate dared venture such a trip under such conditions. And yet twenty-four of them from eleven Indiana cities made the journey to participate in the day's activities, a fact that speaks well for the interest these men hold for their profession and the loyalty they displayed in an endeavor to make the day a success.

The organizations represented at the gathering were, Indiana Chapter, A. I. A., Indiana Society of Architects, Evansville Society of Architects, Fort Wayne Society of Architects, Indianapolis Architectural Club, Lake County Society of Architects and the Indiana Engineering Society.

Starting away on a program that covered the entire day and part of the evening those who attended were steadily on the go, or at least found their time well occupied. As an introductory to the ceremonies there was a tour of inspection of the new $3,000,000 Scottish Rite Cathedral recently dedicated. This was a real treat for the architects all of whom were loud in their praise of this elegant structure of which Indianapolis is justly proud.

Following that feature of the morning the crowd went in a body by autos to the State Fair Grounds where noon luncheon was served. At the completion of that goodfellowship session Architect Merritt Harrison, Indianapolis, President of the Indiana Building Congress, who presided called the crowd to order for a business session for which an especial program had been arranged. The featured speaker was W. J. Weesner, Engineer, Indiana Bell Telephone Company, who spoke on "The Modern Quest," an interesting paper dealing with the importance of good planning and a proper consideration at an early stage for the installation of appliances such as the telephone and other things which go so far today toward the convenience of the household.

In view of the fact that every architect in Indiana is now deeply concerned about the new Architects Registration Law, and considerable misunderstanding is evidenced regarding it, a general discussion was instituted covering that subject. This turn of the program aroused instant and serious attention drawing out many points of a decidedly interesting nature. Architect L. A. Turnock, Indianapolis, chairman of the new State Registration Board was called upon for an interpretation of the law, its requirements and the various provisions under which an architect may register in order to practice in Indiana. He went into his subject at length and clearly set forth the points about which there seems to be considerable confusion. His remarks received close attention and eager reception, many of those present later expressing themselves as highly pleased for the opportunity of thus being given a better understanding of the new law. One particularly interesting fact brought out by the speaker had to do with a recent agreement reached with the Engineers Registration Board whereby the former architectural engineering classification under that board has been nullified and all architects who practiced by virtue of such registration with the Engineers Board must now register with the Architects Board if they would continue their architectural practice.

That practically wound up the business session and for the rest of the afternoon the architects visited the trade show, scattering around among the various booths to look over and examine the materials on display. Many of the architects marveled at the scope of the show and were highly complimentary in their expressions of the exhibit and its completeness. The concensus of opinion was that there was an orderly layout, that things were not crowded and cluttered up and that one could see and examine the displays readily.

As a climax to a day full of interest and enjoyment came the evening banquet at which was presented Dr. Allen Albert, Chicago, Assistant to the President of the Chicago World's Fair, 1933, who spoke on the preparations being made for that event. His was an excellent address, it gripped, held and swept his auditors on and on clear down to his last words. He minutely described the intent of the fair, the wonderful comprehensive plans contemplated, the faith in the architect to develop those plans to the utmost, to produce fair structures beyond anything heretofore developed. Conversant fully with architecture he told of his visit to big fairs now in progress in Europe and in word pictures, illuminating, fascinating, enchanting, held his audience spellbound. To have heard this man was to have been many times repaid for exerting even the greatest effort to brave the elements to

STEEL INSURES STRENGTH AND SECURITY

Structural steel frames this gigantic foundry for a great machinery manufacturer in Indiana. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

There is No Substitute for Steel

Steel is metal, with the best virtues of metal. Non-metallic materials do not have its high compressive, tensile and shearing strength, its resilience, its permanence—its thorough fitness for construction duty.

No other building material is an adequate substitute for steel. No other material has all its advantages.

Steel used as a reinforcement is a high compliment to the metal, but a compromise with its complete advantages when used in the form of structural shapes. Build with steel for strength and security.

KOEHRING WEIGH MIX

MATERIALS and water *proportioned by weight*—mixing period accurately timed—the Koehring *Weigh Mix* is the accurate producer of specification concrete!

It's a standard Heavy Duty Koehring mixer with weighing batch hopper and water tank mounted on an auxiliary frame. All operations are controlled from platform.

All aggregate weighed in one hopper—any number of grades weighable without extra equipment. Water weighed on same beam!

Fast discharging *vibrating* hopper permits mixer to operate at full capacity, and self clearing is so accurate that weighing scale always returns to balance. Absolute, easy, one-man operation!

—and of course the Koehring remixing action makes its own contribution to uniform, dominant strength concrete.

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Sealed Proposals

NOTICE TO CONTRACTORS SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn county, Indiana, that it will on Thursday, November 7th, 1929, at 10 o'clock a. m. at the North School building in Aurora, Dearborn county, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects and engineers, Connersville, Indiana. Plans may be had by all general contractors and mechanical contractors from the architect and engineer at Connersville, Indiana, upon depositing $25.00 to assure the safe return of the plans and the filing of a bona fide bid. The full amount of the deposit will be returned providing bids are filed on the day of letting and plans are returned on or before that date. Plans and specifications have been adopted and approved by the building company, and various boards of the state of Indiana, excepting the state board of accounts.

Plans and specifications are now on file in the office of the North School building, in the office of the state board of accounts and in the office of the architects and engineers, at Connersville, Indiana.

All bids must be in writing on Form No. 96 and accompanied by a filled out Form No. 96-A. The building company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bids; checks made payable to Harry S. Thuermer, president of the school building company, to be held as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check to the building company as liquidated damages.

HARRY F. THUERMER,
President.
JOHN E. MARTIN,
Vice-President.
JOSEPH R. HOUSTON,
Secretary and Treasurer.

Knowlton, R. C. Lennox, C. W. Myers, G. Schreiber, N. Six, L. A. Turnock, O. Williamson, G. C. Wright, D. J. Zimmerman, Indianapolis, and eleven members of the Indianapolis Architectural Club.

INDIANA BUILDING CONGRESS AND TRADE SHOW MARKED BY INTERESTING SESSIONS AND DISPLAYS FOR STATE BUILDING FRATERNITY

Various Professional, Trades and Business Groups Find Week's Event at State Fair Grounds a Real One

Indiana and her building fraternity have moved out into the front rank as progressive elements in the advancement of the building industry. As evidence of this fact stands the all-week session of the Indiana Building Congress and Trade Show held at Indianapolis, October 21 to 26 inclusive. In the first place Indiana possesses the only state building congress in the country, an organization now a year old, and the trade show sponsored by it is the first that has been held in any state, backed as it was by the architect, engineer, general, sub and mechanical contractor, the building trades craftsman and material supply men.

The congress and show are the outgrowth of several years of sincere and constructive organization or association effort, the purpose of which has been to form closer relationships and create better understandings among those of the same professions, businesses and trades, and, that started, to bring them all together on a common level for attempts to solve mutual problems for the ultimate advancement of the building industry.

Visitors from without the state who attended the congress and show while it was in progress were profuse in their praise of the effort put forth and the end attained. As for the sessions of the congress, it was said there was only one other thing in the country with which to compare it and that was the Kansas Forum, held by the building fraternity of that state. Those who spoke thus said the Indiana Congress lost nothing by such a comparison, in fact, in some particulars it outranked the Kansas body in its scope, aim and purpose.

The trade show, too, came in for most favorable comment. While admittedly smaller than national displays of its kind visitors stated the Indiana show was a pleasing surprise to them, in fact was a revelation, and considering its limitations, was a decidedly creditable affair when compared with larger shows of its kind.

The one regret of the week was the abominable weather that prevailed which unquestionably affected the attendance. Such a condition indeed was lamentable for the program offered was of excellent merit and the messages sounded by the various speakers were far beyond the ordinary. All were vital and no man who heard any one of the addresses could go on his way without carrying with him the impress of the good that was sounded. Up to Thursday evening three addresses of exceeding interest and merit, dealing with attitude, were delivered by Oscar Rosenthol, Chicago, who spoke Tuesday, Dr. Allen Albert, Chicago, who appeared before the architects and engineers Wednesday, and Rev. Ambrose Dunkle, Indianapolis, the speaker for Indianapolis Building Congress Day, Thursday. Other speakers at the sessions, all of whom had messages of a different type, more of the technical or trade nature, but highly interesting, were: R. J. Kimbell, Washington, D. C., W. J. Weesner, Indianapolis, "Lew" Turnock, Indianapolis, Frank Dunning, Cleveland, O., Bernard Johnson, Washington, D. C., and Frank Duffey, Indianapolis.

Each day was set apart for some particular branch of the industry, this being the order followed:

Monday—Indiana Building Congress Day.

Tuesday—Contractors Day.

Wednesday—Architects and Engineers Day.

Thursday—Indianapolis Building Congress Day.

Friday—Indiana Builders Supply Dealers Day.

Saturday—Craftsmen Day.

Following the various daily feature sessions the time of the visitors was devoted to viewing the numerous building materials and contractors exhibits grouped about the large Manufacturers Building at the State Fair Grounds. The hundred or so exhibitors went to considerable effort and expense to advantageously display their products, the result being an attractive and instructive exhibition showing practically everything used from contractors' equipment, in the way of trucks, concrete mixers, shovels, saws, hoists and derricks, foundation materials, clay products, roofing, heating equipment, plaster, paint, fireproofing specialties, flooring, waterproofing, ornamental iron and bronze work, cement products, and even building furnishings and appliances. The whole made a fine display of which the Indiana Congress may well be proud, and the cooperation extended by the materials and equipment firms who so heartily lent their support to the venture is deserving of mention, at least, and should be seriously considered when building operations get actively under way. It was the spirit shown and the support given that made the trade show a success, thus enabling the State Building Congress to put the whole across.

MASON CONTRACTORS

(Concluded from Page 3)

ing air, to start a general movement toward the dining room.

And what a meal! The tables groaned under a weight of steaming viands of which the supply seemed unlimited. What happiness! There was the buzz of animated conversation, the rippling echoes of merry laughter, every token of good-fellowship. Fanciful caps adorned every head, and there were souvenirs for the women and children with plenty of smokes for the men folks.

James Rybolt was master of ceremonies and after the meal introduced a program of entertainment furnished by those of the party. There were songs, musical selections, readings and fancy dancing. Nor must one overlook the specialties put on by James Hodgson, Sr., all put across with a lot of snap and pep. "Jimmy" has a fund of Scotch songs in his repertoire and, oh, how he can roll his R's. It was announced that T. J. O'Harra and his wife would be leaving soon for Florida where they expect to spend the winter and the crowd gave them a big hand wishing them a pleasant journey and a happy stay in the South.

The full moon swinging low in the western sky rang down the curtain on this jolly event and sent the folks back to Indianapolis convinced that the Mason Contractors of the Capital City—besides knowing how to lay brick know also how to entertain and when fried chicken tastes best.

POSITION AND SERVICE RECOGNIZED

Directors of the State Building Congress Turn to the Construction Recorder

In seeking a means whereby it was possible to reach the State Building Industry, and because the Recorder afforded a state-wide coverage of that field, those men unanimously voted, after serious consideration, to make the Recorder the official publication of that body.

—:—:—

Such action means that Indiana is to have a building construction organ representative of the entire building industry, something no other individual state in the country has.

EFFORT OF INDIANA BUILDING CONGRESS PROVES THAT ACHIEVEMENT IS FOR BUILDING INTERESTS WHEN THEY WORK TOGETHER

Trade Show at State Fair Grounds at Indianapolis Last Week Demonstrates the Possibilities of Such a Contention

It can be done. Given a goal, an incentive, organized builders can do things, do them right with credit to themselves and to the industry of which they are a part. That was the significant impression left by the Trade Show of the Indiana Building Congress staged at the State Fairgrounds, Indianapolis, October 21 to 26 inclusive.

Organized and co-operative effort among Indiana builders is not new, it has been in progress for a decade or more, and from a feeble beginning, more or less experimental, between architects and contractors has expanded as the years passed until today it embraces every important element in the building construction sphere in the state. This situation is directly reflected in the Indiana Building Congress, a body which is exactly what the name implies and is the logical outgrowth of the organized effort that has been exerted conscientiously for years by men who believed the ultimate formation of a general organization of this type would go far toward solving aggravating mutual problems of those engaged in building, offer a ready avenue by means of which general detering vexations could be cleared up and, further, give to the industry a solidarity otherwise unobtainable.

The original idea and scheme, the purpose, aim, and mode of procedure seemed visionary. The task of molding the individual units into a composite whole and converting the latter into a dynamic working force for constructive and progressive effort seemed herculanean in its scope and all but hopeless. However, intent was back of the move, there was spirit and plenty of it amongst those championing the cause, further, there was an appeal beneath it all for it answered a long felt want. Gradually the thing took hold, its influence spread, the power it held forth aroused interest, the benefits to accrue suggested themselves and today Indiana has a state building congress composed of thirteen constitutent member organizations, representative of thirty thousand Indiana building men, and one associate member a national organization.

Occasions have arisen during the past year in which the State Congress went into action, but no greater evidence of the solidarity of the new body has been demonstrated than that portrayed by the recent Trade Show. In the first place the various constituent member organizations seemed to appreciate the fact that this was the first time in Indiana or the Middle West that builders themselves had had an opportunity to put on a Builders Exhibit, a real trade show, to present to the public a concrete demonstration of a united building industry. The response to the suggestion was instant, the support extended was whole-hearted. Months of intensive preparatory work, a careful consideration of the end in mind and the selection of exhibitors culminated last week in a show or exhibit of building materials and associated equipment that elicited nothing but praise, not only from architects, contractors, engineers, labor representatives, material supply men and others of allied building interests but also from the public.

The plan of the exhibit was excellent, a most orderly layout being followed. The booths were of good size permitting of ample displays with no suggestion of crowding or cluttering up.

There was a meritorious architectural exhibit, an artistic display of photographs of buildings, details and color renderings, put on by the members of the Indiana Society of Architects. The Indiana Masonry Conference, Union Bricklayers Organization, presented examples of brick work of various designs and other masonry work. Many of the displays were arranged so as to demonstrate the claims for and merits of the materials, and this was a most interesting feature to visitors who gave particular attention to those demonstrations. As for the materials themselves there was a wealth of displays covering practically everything used in a modern structure, all of the latest development. Too, there were motor trucks and attachments, contractors tools and equipment, hoists, concrete mixers, air compressors, derricks, etc., also there were oil burners, steam heating apparatus, mechanical refrigeration, factory and home appliances.

As an adjunct to the show the various interests composing the congress held individual meetings during the progress of the show at which speakers of national and local reputation presented talks never excelled, seldom equaled, at any other builders gatherings in Indiana. These speeches were remarkable in their nature and afforded messages that more than repaid any man for the effort he made to attend the show.

Though there have been exhibits that have been more largely attended none have held more interest for visitors, a development readily shown by exhibitors who have reported considerable business transacted and the securing of names of live prospective customers who could only have been found after much work had it not been for the Trade Show. Many of these exhibitors are sold completely on the show, were eager to learn if it is to be repeated next year and have already put in reservations for space for the 1930 event.

BUILDING INDUSTRY NEEDS MORE BUILDING CONGRESSES, BETTER CREDIT METHODS AND BOOSTING

Such Is Argument Advanced by Prominent National Builder

Hitting hard at the loose manner in which credits are handled in the building field and also suggesting that all building men do some intensive ballyhooing to boost construction work, Oscar Rosenthol, prominent Chicago contractor and a well known figure in national building organization circles, delivered a timely and pertinent address to those assembled for Contractors' Day at the Indiana Building Congress Trade Show at Indianapolis October 22.

He began by complimenting Indiana contractors on their splendid organization efforts, and asserted the state stood up among the leading states of the country in this line of endeavor. He was profuse in his praise of the Indiana Building Congress, its construction and aims, saying Indiana may be proud of such a body, for, while several cities have local building congresses, he knew of no other state congress in the country. The only other organization with which to compare it, he said, is the Kansas Builders Forum which is somewhat similar, but the Indiana Congress is broader in its scope and has a much wider activity.

Likens Indiana Body to Somewhat Similar One in Kansas

The Kansas Forum is constituted of various organizations, representative of building interests, and offers a medium through which grievances may be presented, and where charges may be filed against any alleged offending branch of the industry in the way in infractions against good business practices, accepted and recognized ethics and other matters of vital importance to the industry. The defense is assumed by the organization of which the offender is a member and no words are minced, asserted the speaker, in threshing out the subject at issue.

This procedure has been going on for seven years, has worked out much good for the business, has had a welding effect on bringing Kansas builders closer together and built up a more intelligent understanading among them.

One particular point of interest in this connection has been the development of a practice through which architects and master builders have reached an agreement whereby a bidding fee has been established, the owner paying, and this fee is divided among the first five low bidders. The speaker said this practice, developed by the Forum, has become a regular institution today. Indiana contractors, who were present marveled at this revelation and said they wished it was possible to put such a scheme into practice in this state.

Big Way to Solve Problems

Mr. Rosenthol encouraged his auditors to continue the good work in which they are engaged, for it brings about a situation where each branch of the industry is conversant with the others and offers a great opportunity for them all to get together for a solution of the big and little problems that arise to impede not one man, or one group of men, but the whole industry.

He said he realized all builders were not organization converts and that outsiders, as well as members, profited by the good that is accomplished, and yet profit for all meant the advancement of the industry and in the end advancement of business for the individual. There should be compensation for any man in the realization that he had contributed, by his efforts, to the advancement of his profession or business, the speaker asserted.

Referring to the attitude of the man who is set on "going it alone," Mr. Rosenthol cited the story of a negro who, coming up the street, met another of his race all excited who asked the first one where his wife was. The latter replied, "At home." "You better hurry over there—for there's going to be trouble. I just saw a wild cat go in the door," said the informant. "Not me," said the informed, "she don't need to expect no aid from me."

Takes a Whack at Loose Credits

Changing over directly to business matters, the speaker said what the building industry needs most these days is a stabilization of credit. What is it, he asked, that is doing more to disrupt and tear down the building business than any other influence? None other than the irresponsible contractor. It is high time this fellow is curbed. He runs lose, figures at will, don't pay his bills, gets in on dealers and is all set, because the latter are afraid to shut him off for fear they will lose all, or if not that a certain volume of business. Some men figure volume rather than receipts. It is this attitude that makes for "the irresponsible" and turns him loose in competition with men who have reputations and organizations to maintain, men who pride themselves on their ability to produce good structures.

This situation is being realized now and strong and determined efforts are being made to establish local credit bureaus for the building industry. Every means is being made to reach the banker, building and loan associations and other financial interests to give them a clearer understanding of the situation. It is the aim to get these financial men not to ask for a business statement, rather a delinquent list of customers, when loans are sought. When bankers adopt such methods, loans will not be negotiated so easily, credits will be clamped down and "irresponsibles" will find the going much harder. Mr. Rosenthol said these men set a pace no reputable contractor can meet. He vehemently asserted such builders are cheats and will skimp wherever possible in order to "get by." If the industry is to be saved these "irresponsibles" must be eliminated from the field.

What Has Been Done in One Place Can Be Done in Other Localities

Then to show what can be done, he referred to what had been accomplished in Detroit since a credit bureau had been established. He gave figures showing how delinquent accounts had been reduced from $290,000 to $32,000 in a year or so, and how a certain set of contractors had been cut down from 800 to 437 in the same period, all of whom are now discounting their bills. What was done in Detroit can be done elsewhere, said the speaker.

Advocates That Builders Boost Operations by Encouraging Modernization Plea

Concluding, Mr. Rosenthol called attention to the fact that building operations have shown a steady decline and suggested builders could stop this trend if they all will but encourage the modernization idea of old buildings. He told of the birth of the scheme at Decatur, Ill., how it grew and developed a tremendous volume of business. This attracted national attention and was endorsed by 340 executives of firms in the building field who had gathered at Chicago to devise a ways and means to stimulate a sagging industry.

Beyond the fact that there was an estimated $2,000,000 volume of business to be built up through modernization of build-

ings it was felt that the development of such business would revive community interest, enhance resale values of old property, reawaken home consciousness and generally benefit whole cities. Builders owe a debt to society and this is one way to meet that obligation. In thus performing, by encouraging modernization at every opportunity, the building fraternity can do a great service not only to the community, but to the building industry and to itself, concluded the speaker.

EXCELLENCE OF BUILDING CRAFTMANSHIP REWARDED

Seven Mechanics Given Merit Awards by Indianapolis Building Congress at Special Ceremonies

Somewhat removed from the Trade Show, but at the same time a part of the program, and having a direct bearing on the building industry, was the presentation of merit certificates and gold buttons to seven mechanics for excellence of craftsmanship by the Indianapolis Building Congress, October 24.

These exercises, a part of the scheme for the day, were held at the Third Church of Christ, Scientist, Thirty-fourth and Washington boulevard, Indianapolis, and were well attended.

Short talks were made by Hugh J. Baker, representing the church; Fred Jungclaus, representing the builders; S. P. Meadows, representing labor; Robert Frost Daggett, architect for the project. The owner and the contractor paid tribute to the craftsmanship displayed in the construction of the church and expressed their appreciation to the mechanics for the conscientious effort put into their work. Mr. Daggett expressed his appreciation of the cooperation of "Doug" Hayes, building superintendent, and Kenneth Smith, foreman on the job.

Dr. J. Ambrose Dunkel, pastor of the Tabernacle Presbyterian church, said, "I am very happy to be here cooperating in a ceremony of this kind. We Americans are being criticized for the hastiness of our construction. We are building today and tearing down tomorrow. We should begin to realize that buildings of any character should be well done. It is up to each workman on the job to do his part. All of you should appreciate the privilege of giving your skill and accuracy to the work you have to do. These certificates and buttons which are presented to you will make of you a better citizen and a better father.

"I hope these awards will be the means of stirring up the contractors and architects as well as the men who furnish the materials. Everyone all along the line should be made to realize that they have to stand together if we are going to better things in this great construction industry."

After the ceremony, the honorary craftsmen and the Committee of Award adjourned to the Manufacturers' Building at the Fair Grounds for a luncheon at 12:30 p. m. About 65 or 70 members of the local consturction industry in Indianapolis were present at this luncheon. Robert Frost Daggett, president of the Indianapolis Building Congress, presided. Dr. Dunkel talked on "The Spirit of Craftsmanship," i. e., putting your best effort into your daily job in order to attain that supreme happiness and contentment.

"There is a tremendous kick," said Dr. Dunkel, "in living when we do our daily task with a humility and an appreciative mind. We must have faith in ourselves and faith in our jobs. We want to leave a heritage of our life's projects for future generations. We do not want the archeologists of the future, in unearthing this century's achievements, to say they are shoddy and unworthy of comment. I believe you and I should do the thing which we are doing with an eye to doing it correctly.

President Daggett of the Indianapolis Congress, made presentations to these men: L. Babrick, decorator; A. Breckenridge, laborer; B. Browning, carpenter; R. Fearrin, tile setter; N. Guelier, terrazzo layer; R. P. Irrgang, plasterer; R. Pavey, steam fitter.

ENCOURAGEMENT OF APPRENTICES EVIDENCED

Young Tradesmen in the Making at Indianapolis and Fort Wayne

There were many attractive things at last week's Trade Show, such as displays, meetings, excellent speeches, group luncheons, etc., but nothing of the whole had a more important bearing on the industry than the group of bricklayer apprentices who visited the exhibit on Saturday, Craftsmen's Day. In a way, they came unheralded, unsung, but nobody of the crowds who attended during the week took keener interest in the show than those boys who are preparing themselves as future builders.

Much has been said about apprentice training in the building trades and an encouragement of such action. However, there has not been any great or noticeable move in that direction throughout the state, most attention being given to the matter at conventions where enthusiasm is worked up temporarily and then later is allowed to dim when the delegates return home and settle down in the old business rut again.

Such being the case, it was indeed gratifying last Saturday to see those embryo tradesmen, potential builders of the future, and to note the interest they evinced in the show, particularly in those displays having to do directly and indirectly with their work. They spent considerable time at the architects' exhibit and also gave much attention to the display of the Indana Masonry Conference where all sorts of brick and masonry work had been set up for inspection.

The apprentices were from Indianapolis and Fort Wayne. George Schack, Secretary of the Associated Building Contractors of that city, was so enthusiastic about the show, which he attended earlier in the week, that he returned Saturday accompanied by ten apprentices. There are eighteen bricklayer apprentices in Fort Wayne under the sponsorship and guidance of the Mason Contractors Association and the Bricklayers Union but eight of the boys were unable to make the trip. These youngsters go to trade school part time and are employed in like manner on practical work. The apprentice work at Fort Wayne has been carried on for several years and has produced fine results.

At Indianapolis the situation is different. The Bricklayers Union is going it alone in the development of apprentices. These latter, of which there are fourteen now attending the bricklaying school at Technical High School, also studying and working on a part-time schedule, number in all, forty-two, are showing great interest and all are making fine progress.

AN INDUSTRY UNTO ITSELF

Men and Materials In Great Quantities Employed to Erect This Enormous Building

How a gigantic modern business structure today taxes the resources of labor and talent, raw and manufactured materials, as it gains height and solidity to become the world's largest building, is revealed by the lists of men and companies who are providing labor, genius, or materials for the immense Merchandise Mart well under way in Chicago.

In the erection of this centralized market for wholesalers, more than 2,500 members of all the building crafts, whose faces and speech reflect every race and nation that has contributed to America, are toiling in night and day shifts. This is the greatest number of men ever used at any one time on any building project in the United States.

Guide lines to the establishment of a city of classified wholesale wares, capital of the new era of efficiency in buying and distribution, have been marked by sixty-six firms, whose specifications rule the growth of the structure. Into the physical structure of the building have gone or are going the following materials:

60,000 tons of steel, including 61,000 columns, girders, and beams.

558 caissons, requiring 50,000 cubic yards of concrete.

3,915,000 cubic feet of concrete.

200,000 cubic feet of stone.

29,000,000 bricks.

5,500 windows, requiring 132,000 square feet of glass.

30,000 lighting fixtures, with 2,000,000 feet or 380 miles of wire weighing 60 tons.

35,000 electric lamps, drawing 15,000 kilowatts.

15 passenger elevators, traveling 500 miles a day.

14 freight eleevators with a single trip total capacity of 104,000 tons.

5,000,000 feet of lumber.

9,504,000 square feet of steel wire reinforcement for floors, enough for a 100-mile highway, 18 feet wide.

142 miles of piping for the sprinkler system. 50,000 sprinkler heads.

32½ miles of piping for the steam heat system.

40 miles of plumbing pipes.

Outside base dimension for the enormous building are 296 feet on Franklin and Orleans streets, 326 feet on Wells street, 573 feet along the north bank of the Chicago River, and 724 feet on Kinzie street.

To duplicate the 4,000,000 square feet of floor space in the Mart, a skyscraper 200 stories high on a ground plot 125 by 150 feet would be required.

To heat the Mart 204 tons of coal will be burned each day in cold weather to produce 2,880,000 pounds of steam; 2,000,000 cubic feet of fresh air per minute will be forced through the building by fans and radiators, enough to furnish air for a quarter of a million people.

Six and a half miles of plate glass will be used to line the 650-foot sales corridors on 18 floors; 62,000 square feet of space will be utilized on the nineteenth floor to accommodate the National Broadcasting Company in the world's largest broadcasting studio.

Five hundred millions of dollars is the estimated figure for annual sales in the Mart; 60,000 is the estimated number of people in the building every day, and 118 the number of freight cars beneath the structure at one time, in the 224,000 square feet of loading space, to care for incoming and outgoing goods.

Speed records also are being broken in the construction of the world's biggest building and many new machines, in use for the first time, cut down the manpower. Wheelbarrows, shovels, handsaws, planes, chisels and all other builders' tools succumbed to the faster and more efficient products of this mechanistic age. Cement, for instance, transported by boat in bulk, was shot by compressed air to a height of 75 feet to a mammoth bin, which holds 5,800 barrels. Gravel and sand are merchanically elevated from railroad cars to another bin. The materials are fed by gravity into mechanical mixers. After mixing the wet concrete is distributed throughout the building over a series of endless belt conveyors eliminating wheelbarrows and all man handling. Railroad cranes unload the steel beams and nine gigantic guy derricks, always kept on the top level of the rising building, hoist them to their places. Woodwork for forms and other purposes is done in a well-organized job mill on the site, where an efficient outfit of electrical-powered saws, planers and other tools produce any desired article on demand.

That's how they go at it and what it takes to put up the largest business building in the world today.

STEEL INSURES STRENGTH AND SECURITY

The use of structural steel for strength is exemplified in the Monon locomotive repair shops in Lafayette, Indiana. The 650 tons of steel in this building were fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

Use Steel For Strength,

STRENGTH must be an inherent quality of a structural frame material. It must be uniform, dependable and definitely ascertainable. Steel is the germ principle of the evolution of modern construction and structure, and is the standard for comparison of all structural frame materials. In the Monon locomotive shops, pictured above, one job that structural steel is called on to perform is the supporting of a 250-ton traveling crane, capable of lifting bodily the largest railway locomotive for speedy movement from one repair operation to another. Steel serves best here as in any other work where strength is vital.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

The use of structural steel permitted the designing of this addition to the Inland Box Company's plant Indianapolis to fit the exact needs of the owner. Steel fabricated and erected by a member of the Indiana tructural Steel Board of Trade.

ability and Permanence

DURABILITY is unchangable strength and resistance to depreciation. Steel is dense, therefore not penetrable by moisture or grease which dissolve or modify constituent chemical elements. Therefore, steel's chemical composition is unchangeable and its strength is permanent. PERFORMANCE is a predominant element in modern building. Only with the use of structural steel can such permanence be obtained. Steel binds the stone or other finishing material into one unified whole. Steel is the only structural material that has unchanging strength and uniformity of comparison, as proved by long-time comparative strength tests and chemical analysis.

Sealed Proposals

NOTICE TO CONTRACTORS SCHOOL HOUSE

Notice is hereby given by the undersigned, the Aurora School Building Company, of Aurora, Dearborn county, Indiana, that it will on Thursday, November 7th, 1929, at 10 o'clock a. m. at the North School building in Aurora, Dearborn county, Indiana, receive sealed bids, for the erection of a school building and installation of a plumbing system, electric wiring, heating and ventilating, according to the plans and specifications prepared by Henkel & Hanson, architects and engineers, Connersville, Indiana. Plans may be had by all general contractors and mechanical contractors from the architect and engineer at Connersville, Indiana, upon depositing $25.00 to assure the safe return of the plans and the filing of a bona fide bid. The full amount of the deposit will be returned providing bids are filed on the day of letting and plans are returned on or before that date. Plans and specifications have been adopted and approved by the building company, and various boards of the state of Indiana, excepting the state board of accounts.

Plans and specifications are now on file in the office of the North School building, in the office of the state board of accounts and in the office of the architects and engineers, at Connersville, Indiana.

All bids must be in writing on Form No. 96 and accompanied by a filled out Form No. 96-A. The building company reserves the right to reject any and all bids and to have sufficient time to investigate bids and qualifications of bidders. Each bid must be accompanied by a certified check in a sum equal to three per cent of amount of bids; checks made payable to Harry S. Thuermer, president of the school building company, to be held as a guarantee of good faith, and that the successful bidder will execute a contract, and furnish a surety bond for the full amount of bid. Checks of bidders not awarded contracts will be returned within ten days.

Should a successful bidder fail to execute contract and furnish surety bond as required he shall forfeit the amount of such check to the building company as liquidated damages.

HARRY F. THUERMER,
President.
JOHN E. MARTIN,
Vice-President.
JOSEPH R. HOUSTON,
Secretary and Treasurer.

EFFORT OF INDIANAPOLIS BUILDING CONGRESS

(Concluded from Page 3)

One of the outstanding features of this attempt of the Indiana Building Congress was that, though it was purely an experiment, it served to arouse universal interest among the members, carried an appeal to prospective exhibitors, drew in not only builders but the public as well and wound up as a glorious success. Further, and greater than all the rest, it served to show that builders can be drawn together in a common cause, can be united, and, working in harmony, can put across what they start out to do. The same holds good in business relationships, dealings and association, and the Indiana Building Congress has proved beyond a doubt that, supported, it offers the one and only avenue to that end, which pursued will lead on to a brighter future for the Indiana Building Industry.

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

PROX HOT BLAST SMOKELESS BOILERS

Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood

Capacities—800 sq. ft. to 25,000 sq. ft. steam

RECESSION OF BUILDING OPERATIONS AGAIN APPARENT IN OCTOBER RETURNS

Indianapolis Volume of New Work Continues to Run Below Previous Months' Figures

Residential construction operations continue active at Indianapolis, this type of work being the greatest individual contributor to the general volume of building business month after month. The estimated valuation on new residences for the past few months has run over the half million dollars mark monthly and has accounted for from forty to fifty per cent of the total volume of new work. It is the lack of large business and industrial structures also a decided falling off of apartment house construction that has done so much to pull down Hoosier Capital City building figures this year.

The improvement noted in August was but momentary for the increased business recorded for that month over July did not carry far and settled back to a downward trend soon thereafter, moved on across September and continued through October.

According to the official figures submitted by Miss Clara Oxley, statistician for the city building inspecton department, the estmated valuation on the new work passed upon amounted to $1,298,401 which was 29% less than August, a 19% decline from the September volume and 45.48% behind the figures of October a year ago. The strange part of all this is that several hundred more permits were issued in October than in July, August or September of this year and 313 more than in October, 1928. This would indicate that much attention is being given to the smaller sort of work and when that occurs it takes a vast volume of it to make any sort of a showing.

A clasisfication of the work for which permits were issued last month sizes up this way:

Type of Work	Per.	Est. Value
Apartment buildings	4	$ 59,675
Accessory buildings	164	63,624
Business building	26	289,427
Dwellings	91	571,200
Industrial buildings	2	50,000
Miscellaneous	158	140,329
Repairs and alterations	287	124,146
Totals	732	$1,298,401

BUILDING PROGRESS TOLD IN STATISTICS

Every Kind of Building Material Made in Greater Volume Than a Decade Ago

The importance of the building industry in the economic life of the country can be judged by the increases attributable to it in the production of such basic materials as cement, steel and brick.

The Thompson-Starrett Company has told this story in figures. For instance, from 1918 to 1928 the production of cement increased from 74,000,000 barrels to 171,000,000 barrels, from 50 to 60 per cent of this annual output being used in building construction. In 1923, of the 24,600,000 gross tons of rolled steel produced, 15 per cent was used in building and construction, 22 per cent by the railroads and 10 per cent by the automotive industry. In 1928, of the record total of 37,300,000 tons, 16.5 per cent was used for building and construction, 16 per cent by the railroads and 18 per cent by automotive plants.

In 1919 manufacturers of common and face brick put on the market 4,751,891,000 of the former and 791,068,000 of the latter, with a valuation of $63,585,000 and $16,033,000, respectively. Building construction, which consumes practically all the production of these lines, caused these totals to rise to 6,948,393,000 of common brick in 1927 and 2,411,810,000 of face brick. The increase in valuation was about in the same degree, the face brick production in 1927 being worth $41,504,000, and the common brick, $77,219,000.

"All down the line similar increases are noted for other materials, but building has had a wider effect, according to a statement issued by the Thompson-Starrett Company explaining the statistics.

TWO KINDS OF EMPLOYERS

Attitude Toward Apprentices Quickly Shows Where They Stand on the Problem

There are only two kinds of employers as far as apprenticeship is concerned—those who take a genuine interest in apprenticeship and those who don't. It does not follow that simply because one employs apprentices that he is in sympathy with apprenticeship. Here is a master plumber who always has apprentices but who has never yet graduated one. Trouble begins when the plumber asks the apprentice to dig ditches. The apprentice puts up with that abuse for a while and then threatens to quit. Whether the apprentice quits or remains doesn't worry the master plumber because he doesn't have any difficulty finding another boy to take his place. This employer isn't interested in apprenticeship. All he wants is cheap labor.

A plasterer contractor graduated an exceptionally able apprentice. This boy left the contractor's employ and six months later he found him as foreman in the city of Chicago. The contractor, instead of getting grouchy about it, took considerable pride in the boy and especially in the fact that HIS graduates were real mechanics. He promptly indentured another boy to prove to the world that he could repeat the performance. This employer represents the backbone of trade. We need more of his kind.

Soon after an apprentice became 18 years of age both he and his employer asked for a cancellation of indenture. It developed upon investigation that they conspired to end the formal apprenticeship so that the boy would no longer need to attend school. Certainly that employer is not interested in apprenticeship. It is his kind that is pulling down the standards of the trades.

An apprentice in a metal working establishment was married. He soon discovered that he could not make a living on the wage he was earning and consequently asked of his employer permission to drop his apprenticeship. From the employer's

TWO KINDS OF EMPLOYERS

(Continued from Page 3)

viewpoint that would have been the easiest way out. But being a kindly employer, and one in sympathy with apprenticeship, he transferred the boy to the tool design department where the apprentice could not only earn more money but where he had an excellent opportunity to improve himself.

And so we could cite other examples to show that some employers build up good reputations as employers of apprentices while others would be doing the trades a favor not to employ any apprentices at all. Incidently, those with the good reputations get the most desirable boys from agencies engaged in placement work.

Leaders in a given trade may work overtime promoting apprenticeship in their trade but apprenticeship thrives only in proportion to the number of employers who take a genuine interest in their own learners. — (Master Builder, Appleton, Wis.)

RATIONALIZATION OF OUTPUT

Steel Man Says That Is the Problem

C. H. ABBOTT, Executive Dir. Amer. Inst. of Steel Constrn.

Despite the progress made in management during the past few years there are certain economic factors today which are confessedly disquieting. I refer in particular to the oft-claimed possibility that, by reason of the improvement of mass production, output may outstrip consumption. Seemingly that has at times happened, markets have been glutted with goods and the crisis passed temporarily merely by a judicious cutting of prices. Many of our business executives have been led to believe, because of this recurring phenomena that there is a potential excess plant capacity constantly existing within their industries.

So long as we look at this problem from the point of view of the manufacturer we will forever be confronted with the spectra of market satiation and excess plant capacity. That of course is disquieting and justly caused considerable worry in the business world. If we are to remedy this situation we must divert our planning from the problems of production and give some thought to the problems of market and the distribution of the goods we are manufacturing.

We are at a stage of industrial development where it is much easier to produce than it is to sell that which we produce; it is easier to employ scientific management in the factory and eliminate production waste than it is to make a profit on our goods. Efficiency in plant production has reduced costs to the minimum and therefore if relief is to be expected from the many perplexing problems it must come from similar attention devoted to the market and distribution methods.

The principal problem confronting most industries at the present time is that of the market. Consumption must be maintained on a basis equaling capacities to produce or production must be stabilized in keeping with ability to sell. There are instances where demand is declining or where it is impossible to increase it to any extent and, under such conditions, diversified production or the development of new uses would offer the solution.

The textile industry diversified its production by producing rayon, while the iceman began to sell refrigeratos, butter, eggs and cream, as electric refrigerators encroached upon his market. The coal man is soliciting orders for oil, and there are many other instances where diversification has been necessary to meeting changing economic conditions.

In most cases, however, the application of research by an organized industry would undoubtedly develop new practical uses for the product and at the same time locate new opportunities for extending present markets. When we suggest research for an industry we should not expect immediate results. It is no assured talisman, for results will depend upon how research is conducted. In order that it may be productive of good for the industry as a whole, it must be carried on by the industry and not left to a single company. In that case the industry will profit through impartial investigation while, when in the hands of a single corporation, the benefits must of necessity be selfishly applied and selfishly circumscribed. Research by joint action of an industry as a whole may reasonably be expected to promote the best interests of all—the industry as well as the public—and not that of a single company.

It is too bad that some money-making and money-saving methods are called "research." The word calls up visions of high-brow investigations by expensive experts. "Research" has a scientific sound. An ordinary business man is scared by it; in fact, he may think trade research is "theoretical" and academic. He turns impatiently from it to his rule of thumb practices—which sometimes lead him to the bankruptcy courts.

Research improperly applied may prove as great an industrial waste as any agency for waste business has ever experienced. Dr. Julius Klein, Assistant Secretary of Commerce, holds that between eight and ten billion dollars annually is chargeable to waste in the conduct of business in America. This waste about equalled the value of all our foreign trade in 1928. Waste occurs through excessive expenditures in sales promotion, unwise credit methods, disorderly marketing, extravagant delivery services, ill-judged advertising, etc.

Inability of business executives fully to appreciate the problems of distribution, to have any known yardstick whereby to measure market possibilities, lacking any scientific approach to the control of marketing costs, constitutes the basis of this present-day problem. The federal government has authorized the taking of a census of distribution. It will be the first time any real concerted action has been taken to measure the volume of our own domestic consumption. Without that measure we will continue to ship our goods to a market about which we have no exact knowledge.

Until now we have imagined that if goods refused to sell it was due to the fact that the price was too high, and our more powerful corporations would set about finding new means of reducing production costs. Since 1920 millions of dollars have been expended in modernizing material plants of the United States, reducing costs of production. But all those huge savings have been passed on to the public in the way of lower prices. All the potential profits have been dissipated by inefficient selling due to our inability to rationalize output.

One hears a good deal about the saturation point, where demand, like a loaded sponge, refuses to absorb further. But repeatedly the country has reached and passed what timid prophets thought was its utmost need for a given commodity.

To accomplish such a result it is essential for industry to recognize the vital need of co-operative advertising to the public in order to reinforce the activities of individual efforts.

I am not alone in holding to this conviction. It has been estimated that advertising appropriations during 1929 exceed by 20 per cent those of 1928. That would seem to prove conclusively that most business men consider advertising important. It is important just to preserve the present market of an industry, for without adequate advertising substitute materials would soon nibble away at the market an industry justly occupies.

FIVE-DAY WEEK ESTABLISHING ITSELF IN THE BUILDING INDUSTRY

Survey by U. S. Department of Labor Shows Shorter Working Week Gains Favor Steadily

The five-day week is increasing in industry, the Bureau of Labor Statistics, Department of Labor, has just stated on the basis of a recent survey.

The most rapid progress in the movement has been made in the building trades, the men's clothing industry, and the automobile industry, but it is of growing importance in many other industries such as foundries and machine shops, where in 1928 the five-day week in whole or in part was in effect in 4.2 per cent of the total number of establishments covered in the bureau's survey.

Situation Is Reviewed

The present extent of the five-day week is given in a statement which appeared in a recent issue of the Monthly Labor Review. The statement follows:

"The recent adoption of the five-day week in the New York City building trades, affecting some 150,000 workers, has aroused renewed interest in the whole subject of the five-day week in American industry.

"An article published in the Labor Review, December, 1926, gave data regarding the prevalence of the five-day week at that time, in so far as information was available to the bureau from its wage surveys, its studies of collective agreements, etc. The present article reviews subsequent developments and presents a brief survey of the five-day week at that time, in so far as information was available to the bureau from its wage surveys, its studies of collective agreements, etc. The present article reviews subsequent developments and presents a brief survey of the prevalence of the five-day week at the present time, the sources of information being the same as in the previous article.

"Of the larger industries, the men's clothing industry continues to show by far the largest number of establishments and the largest number of employes working a regular five-day week schedule. In the survey of wages and hours of labor in this industry made by the Bureau of Labor Statistics in 1928, it was found that 53 per cent of the establishments with 33 per cent of the workers employed had a five-day week, as compared with 49 per cent of the establishments and 32.3 per cent of the workers with a five-day week in the year 1926.

"The automobile industry showed a very great extension of the five-day week between the 1925 and the 1928 wage surveys by the Bureau of Labor Statistics. In 1925, 1.5 per cent of the employes were working a regular five-day week, whereas in 1928 this percentage had increased to approximately 30.

"In the organized building trades a rapid extension of the five-day week has occurred during the past few years. In 1926, 6.6 per cent of the building trade workers were employed on a regular five-day-week schedule and 0.6 per cent were working five days a week for part of the year. In 1928, the percentage working a regular five-day week had increased to 14.6 and the percentage working five days a week for part of the year had increased to 1.4. The building trades most affected by the short week were the lathers, painters and plasterers.

Tendency Is Increasing

"The above data regarding the building trades are based on the bureau's union wage survey. Within the last few months there has apparently been a marked extension of the five-day week in the building industry. A national survey by S. W. Straus & company, found as follows:

" 'From an economic standpoint the most important current development in the building industry in this country is the rapid drift toward the five-day week,' says the report. 'Following its recent adoption by the 12,000 bricklayers in New York City, evidence is at hand indicating the possibility of the entire industry in the metropolis adopting the short-week schedule.

" 'According to C. G. Norman, chairman of the board of directors of the New York Building Trades Employers' association, the 150,000 building craftsmen in New York and immediate suburbs will be on the five-day schedule by January 1 next. ***

" 'In Chicago plasterers and painters are now on the short-week basis

" 'St. Louis comes nearer being completely on the five-day plan than any other American city. The following building trades are now operating on it there: Carpenters, plasterers, cement finishers, elevator constructors, electric workers, lathers, sheet-metal workers, plumbers, steam fitters, asbestos workers and all craftsmen connected with the painter's trade.

Movement Gains In West

" 'The five-day week is gaining considerable headway on the Pacific coast, particularly in San Francisco, Portland and Seattle, but has made no appreciable progress in Los Angeles because of the open-shop basis.

" 'Considerable progress is reported in various other important building centers in all parts of the country.'

"In the organized granite and stone trades, the regular five-day week throughout the year was uncommon, but 12.9 per cent of the members in 1929 were working on a five-day schedule for part of the year."

ASSUME PERILOUS POSITION

Sub-Contractors Likened to Lambs By New York Credit Man

The greatest hazard in the building business is taken by the sub-contractors and the material men—at least in a greater degree than the speculative builder.

This statement made by R. C. Post, president of the Credit association of the Building Trades of New York, is further evidence of the claim that the sub-contractors and material men too frequently give credit blindfolded.

"Many men claim that the City of New York has been built by the building speculators, and there is at least some truth in that statement, but the building speculators who take chances with their own money form one class, and the building operators who speculate with the money of members of the building industry form an entirely different group; and they are the ones the Credit association is watching," said Mr. Post.

"The real lambs in the building industry are the sub-contractors and material men who extend credit blindfolded, build the building, furnish the materials, and do all the work for operators who will make all the profit, if there is any.

"Many operations have been put through with ten per cent invested, and one such operator said that that was all most of them put in. Building loans are secured to six per cent of the value of the property; the promoter may have the title to the land or even that may be subject to a subordinated mortgage, and from some quarter twenty or thirty per cent must be provided from other sources to complete the building.

"That last twenty or thirty per cent is the big item of chance that the supply houses and the sub-contractors are providing and they reap none of the benefits outside of the small profits on labor and materials furnished.

"This fact is not realized by many in the industry. They reason that because a large institution is loaning money that the operation must be sound; but the financial institution holds all the security, and the contract given to the sub-contractor or material man is in the name of the corporation, that represents nothing.

"These operations definitely plan the fellow furnishing the labor and materials shall carry twenty, twenty-five ,or thirty per cent of the cost of the building. They may give promissory notes, but these are in the name of the corporation that has nothing but the building, and may be renewed indefinitely."—(Master Builder, Appleton, Wis.)

EVANSVILLE ARCHITECTS TO BE HOSTS TO OTHERS OF THE PROFESSION THROUGHOUT THE STATE

Regional I. S. A. Meeting to Be Held in Southern Indiana

Preliminary plans, not the kind with which architects are so familiarly conversant, rather, a different set of plans, are now in the making for an affair that will be of interest to the Indiana members of the architectural profession. They have to do with the regular quarterly regional meeting of the Indiana Society of Architects which is to be held at Evansville, Ind., Dec. 6.

The approaching gathering was scheduled down there as a tribute to the Evansville Society of Architects, a local body that was worked earnestly in the interest of the profession in the Vanderburgh county seat and surrounding territory, has co-operated with the state society in all its constructive moves and taken an active part in various propositions advanced for the betterment of the entire state building industry.

The Evansville organiation with a pretty tough problem on hand at the outset has succeeded wonderfully well in overcoming certain evils that beset the local profession and the industry as well. Then too it has served to bring the Evansville architects closer together both personally and professionally and given to them a unity of purpose and a power that springs from solidarity. Further it has given to them a recognition and standing in the community unknown a few years back.

Their local archievements, their interest in furthering the aims of the State Society, the support they extended and their attendance at I. S. A., meetings and conventions drew unto them much commendation from those interested in advancing the profession, and as a mark of appreciation of the earnest effort put forth it was decided by I. S. A. directors to hold the December regional meeting at Evansville.

Thus another milestone is soon to be passed by the architects' organization down there, for it is to play host to the architects of the rest of the state. And in anticipation of the occasion, the Evansville architects are planning quite a program for their visitors.

The meeting is still three weeks off, thus allowing plenty of time for I. S. A. members to arrange to attend, a feature that should work for a good attendance at the regional meeting.

A MONUMENT TO THE ARCHITECTURAL PROFESSION AND THE BUILDING INDUSTRY

Professional and Building Business Interests Centralized In New Building at Indianapolis

Several years ago there was a proposition suggested at a meeting of the Indianapolis Architects' Association that it would be a fine thing if the architects could have an office building of their own to house the profession. The thought was that such a structure would stand out as a focal point to remind the public constantly of the architect, definitely locate him and lend prestige to the profession.

The idea was radical, more or less visionary and proposed an undertaking that looked decidedly stupendous. At the time it had all the ear marks of a pleasing dream and like a dream seemed hardly capable of realization.

However, despite the obstacles that instantly presented themselves the idea carried an appeal, it sank in, made converts and would not be shelved. Time and again it pushed to the fore later on, and various schemes were advanced for getting such a project launched. It was easy enough to sketch plans, to choose desirable locations and settle other details, but there was one big barrier that appeared unsurmountable it had to do with the financing.

Still the dream persisted, the idea grew and impediments but lent incentive. Finally about a year ago a building financeering firm, Klein and Kuhn, Indianapolis, became interested in the project when they sensed the interest shown and the latter part of January this year the contract was awarded for an eight-story addition, fifty feet by one hundred feet to a two-story structure located at Pennsylvania and Vermont streets.

Today the "dream building" stands completed, a monument to an ideal, a fine example of perseverance.

The scope of the building has been extended from the original conception, and in addition to housing architects, includes in its tenancy many builders, material supply firms, building specialty representatives and even mechanical equipment men. There are fifteen or more architects who have their offices in the new structure and they are offices, in fact, they are virtual studios, all done in excellent taste with a decidedly artistic atmosphere.

Though the building has just been completed ninety-two per cent of the office space has been leased, and eighty-five per cent of that has been taken by representatives of the building industry.

The structure has done much to centralize the professional, contractural and building material fraternity in the "down town" business center and is, as the name implies, an "Architects and Builders Building." That name, standing forth in the daylight and glowing by flood light at night, can be seen for blocks, focuses attention on the building industry and gives to it a commanding publicity such as is seldom offered. It is a living monument to the industry, a distinctive structure such as few cities have, and architects the state over should take pride in the fact that it sprung from an idea conceived by architects and developed because they would not let it fade away into a dream.

INDIANAPOLIS

***Hospital Buildings** (ward units): $550,000.00, 3-stys. and bas., City Hospital, 960 Locke street, Indianapolis. Archt., Vonnegut, Bohn and Mueller, 610 Indiana Trust Bldg., Indianapolis. Hospital Consultant, Dr. Parnell, Rochester, N. Y. Owner, ity of Indianapolis, Board of Health, Dr. Herman Morgan, secretary, city hall. On working drawings; will probably take bids in early spring, 1930. Brick, reinforced concrete and steel construction.

***Hospital Building** (addition): $300,000.00, 3-stys. and bas., Churchman avenue, Beech Grove, near Indianapolis. Archt., D. X. Murphy, 714 Louisville Trust Bldg., Louisville, Ky. Owner, St. Francis Hospital, Dr. Vincent Anthony Lapenta, chief of surgical staff, Beech Grove. Plans in progress; will mature in spring 1930. Brick, reinforced concrete, structural steel, stone trim. Will include 70 hospital rooms, nurses' training school and sleeping quarters for nurses and internes.

***Children's Guardian Home** (addition): $160,000.00, 2-stys. and bas., 5751 University avenue, Indianapolis. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Owner, Marion County Board of Commissioners; Harry Dunn, auditor, Court House. Receiving bids to 10 o'clock a. m., Wednesday, November 13th. An additional bidder on the general contract is D. Estle, 2842 North Dearborn street. An additional bidder on the electrical wiring is Charles L. Smith Electric Company, 122 South Pennsylvania street, both of Indianapolis.

***Shelter and Bath House:** $75,000.00, Dunes State Park, La Porte county, Indiana. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, State of Indiana, Department of Conservation, Richard Lieber, director, State House, Indianapolis. Starting work; general contractor, Mustard-Curry Building Corporation, Bloomington. Architect is receiving bids to 2 o'clock p. m., Thursday, November 14th, on the plumbing, heating and electrical wiring. A $5.00 deposit on plans is required. Additional bidders on the plumbing: Frank Irish, 2909 East 10th street, Indianapolis; McAuliffe Plumbing and Heating Company, Broadway and Fir street, Indiana Harbor. Additional bidders on the electrical wiring: Charles L. Smith Electric Company, 122 South Pennsylvania street; Hatfield Electric Company, 102 South Meridian street, both of Indianapolis.

***Sorority House:** $40,000.00, 2-stys. and bas., 40x65, near Butler university, Indianapolis. Archt., McGuire and Shook, 941 North Meridian stret, Indianapolis. Owner, Delta Delta Delta Sorority; Mrs. M. L. Thompson, chairman of building committee, 325 West 44th stret. Architect is receiving bids to 2 .o'clock p. m. Tuesday, November 12th. Brick veneer over frame, stone trim, slate roof, steel sash, hardwood floors, steam heating plant, tile baths, wrought iron work. The following are figuring the general contract: Floyd M. Cooley, 5675 Winthrop avenue; J. T. Elliott, 508 Fidelity Trust Bldg.; Moir and Davis, 836 North Denny street; Pruitt and Quackenbush, 520 Sutherland avenue; Charles T. Caldwell, 239 Cumberland street; J. Gilbert West, 617 Architects and Builders Bldg.; W. F. Parrish, 5410 Central avenue; C. W. Eaton, 5324 Park avenue; Rollin French, 715 East 59th street; J. H. Miles, 5251 Washington boulevard; Albert Von Spreckleson, 549 Udell street; Walter C. Kelly, 3936 Cornelius avenue. The following are figuring the plumbing and heating; I. W. Cotton, 2004 West Washington street; Hayes Brothers, 236 West Vermont street; Henry Meyer, 1246 South East street. The following are figuring the electrical wiring: Sanborn Electric Company, 309 North Illinois street; Hatfield Electric Company, 102 South Meridian street; H. M. Stradling Electric Company, 353 Massachusetts avenue, all of Indianapolis.

Police Station Building (alterations): $20,000.00, 3-stys. and bas., 35 South Alabama street, Indianapolis. Archt., Frank B. Hunter, 912 State Life Bldg., Indianapolis. Owner, City of Indianapolis, Board of Safety, Fred W. Connell, president, city hall. Plans completed; will probably take bids soon. Work consists of interior alterations, new elevator, new fire escapes.

***Church Building** (alterations): 1-sty. and bas., 32x35, South Adams street, Marion. Archt., W. H. Garns and Son, 1319 Fletcher Trust Bldg., Indianapolis. Owner, Methodist Church Congregation; Rev. J. R. Stanton, pastor, Marion. Bids in under advisement, will award contracts Wednesday, November 20th. Work consists of brick veneering present frame structure, new asbestos shingle roof, changing steam heating system, new floors.

Residence and Garage: $15,000.00, 1-sty. and bas., Wynnedale addition, north of Indianapolis. Private plans. Owner and builder, Ed H. Dalby, 5860 Guilford avenue. Starting work. STEEL INSURES STRENGTH AND SECURITY

Structural steel framework of the J. F. Wild Building, Indianapolis, showing steel's adaptability to speedy construction. Floors are being completed before the steel framework is completely topped out. Steel fabricated and erected by Hetherington & Berner, Indianapolis.

Winter Construction Proves STEEL'S Superiority

The erection of structural steel can proceed, regardless of weather conditions, as long as men can work. The strength of steel is not impaired by freezing, intense heat, or rain. Its qualities are immune to injury resulting from climatic conditions, and it does not have to be warmed, protected or kept moist in order to acquire its strength.

Place your faith in steel for every type of construction. Avoid costly delays, and remember that steel has the strength and adaptability that no other structural material can offer.

KOEHRING
DANDIE

Fit a Dandie to Your Job!

HERE'S the Dandie 7-S, for example—a one bagger with liberal room for mixing action!

Equip it with the fast charging skip, roomy enough and right-shaped to chute materials into drum in a swift, clean slide. No clogging!

—or fit it with roomy low charging hopper and the strong sturdy platform that hinges up against drum in moving from job to job!

Give it the Koehring automatic water measuring tank, and batchmeter to time mixing period and you're equipped to meet strict specifications and quality tests!

However you equip your Dandie, you'll get fast charging and fast discharging! You get the long-service reliability of superior construction, the easy portability and handiness of practical design!

Study the Dandie transmission—that in itself tells a wonderful story of service-life!

The more you know the Dandie — the more you'll recognize it as the *outstanding value in its class!*

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Dandie Mixers: 5-S, 7-S, 10-S

5-S single or four cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

FURTHER DECLINES SHOWN FOR INDIANA BUILDING

October Figures Reveal Some Individual City Improvement Here and There, But State's Total of New Construction Work Falls Behind Previous Volumes

More air went out of the Indiana building bubble again in October with the result that the state's monthly new building construction volume underwent another shrinkage process. This time the figures went considerably under the four million dollars level which is the lowest it has been in quite some time. The general trend of activity which began a downward movement several months back saw no let-up last month, things slumping noticeably.

The figures from which comparisons are made and conclusions reached were submitted by the building commissioners and inspectors of thirteen of Indiana's leading cities where permits are issued for building operations and records of such activities are kept. While this data does not include all new work in the state, nevertheless it does give a fairly good guage by which to size up the situation.

A comparison of the October, 1929, return with the figures of the corresponding month of previous years shows that the current volume of business is 34% in arrears of that for October, 1928, and 25% behind the October, 1927, figure. Then getting down to date, one finds the business for last month trailed that for September, 1929, to the tune of 24%.

In view of these losses it is pleasing to discover that several of the individual cities showed gains for October over the corresponding periods, both for last and the year before that. The cities recording improvement in building activity, both over October, 1928, and October, 1927, respectively, were: Kokomo, 23% and 50%; Evansville, 16% and 47%; Fort Wayne, 6% and 21%; Elkhart, 4% and 20%; Terre Haute, 2% for October, 1929, but a loss from October, 1927. The other eight cities showed varying ranges of losess for last month as compared with the two previous years, except South Bend which showed a 29% loss from October, 1928, but a 138% gain over October, 1927.

Here are the official October figures submitted by the building inspection departments of the various cities:

City	1929 Estimated Value	1928 Estimated Value	1927 Estimated Value
Elkhart	$ 95,759	$ 91,873	$ 76,265
Evansville	365,765	306,621	248,461
Fort Wayne	435,045	407,831	358,663
Gary	154,400	393,660	1,109,851
Hammond	301,500	454,100	346,300
Indianapolis	1,298,401	2,381,580	1,556,574
Kokomo	64,561	52,275	43,025
Michigan City	21,455	35,230	62,620
Mishawaka	82,127	83,362	92,000
Muncie	67,306	279,373	613,660
Richmond	49,870	81,510	91,416
South Bend	725,625	1,021,320	304,878
Terre Haute	72,060	70,464	94,268
Totals	$3,733,874	$5,659,199	$4,997,981

WRONG COMPETITION

A Proposed Remedy

F. E. DISCHNER, Sec'y.
American Institute of Quantity Surveyors

Ruinous competition certainly is wrong competition. Where there is a wrong, there is a remedy. The problem for contractors is not only to find the remedy, but to possess the courage to set in motion the machinery to eradicate the wrong.

Complicated Present Day Construction

Not only is the construction of today more complicated, but so also is the relation in the industry. The architect has delegated so much work in details to manufacturers and sub-contractors that it is hard to tell where his function begins and where it is taken up by someone else. It is decidedly the day when true skill is a decided advantage over lack of skill, providing the machinery is geared so that skill comes into mesh and shows up.

Know Your Quantities

Right competition is founded first of all on all bidders bidding on the same thing—on the same quantities. Errors in quantities bid upon always react against true skill coming into its own. If a good bidder makes a mistake in quantities, he may get a job at a losing price or he may be cheated out of a job because the mistake and nothing else made his figures too high. A bidder who is not really qualified in any sense to get a job, may and often does get it away from thoroughly responsible bidders because without knowledge of real quantities, he submits a wildly or mildly low bid.

The fact is that if a machinery can be set up whereby all bidders will bid upon the same quantities, there will be put into effect a positive remedy for the worst ill which affects contracting.

The very evolution of construction into its present intricate stage has brought about a departure from the old, which is fairly recent in this country, although well tried and established in England, Germany, France and some other European countries. This new departure is the

establishment in this country of several thoroughly responsible independent quantity survey bureaus. Along side these responsible bureaus there have sprung up less responsible ones. The partial recognition of the benefits of the quantity survey has also brought about the establishment of bureaus to carry on this important work maintained by and operated for the benefit of contractor associations.

The quantity survey itself, therefore, has come into such use that its possible benefits are not unknown. Much publicity has been gained for the movement and scarcely a convention of contractors passes into history without having written into its records the discussion of quantity surveying.

It is time for all concerned to think still more carefully of this new function in the construction industry. It its time to show how with courage we can apply a real remedy for the wrong competition.

Eliminating Mysteries

First of all, let us differentiate upon the difference between commercial firms well founded and those ill founded so that we may recognize the well founded ones if we would wish. The well founded firm will not be found peddling prepared quantities. It will not be found offering to its prospects anything but a set of quantities detailed as it advertises them and this only on an order taken in advance for the service. A reputable firm will be manned by men who understand construction. The quantities delivered by such a firm will not be mysteries or mysterious. They will be done on the basis that doing well is the only way to build business.

Association Bureaus Have No Effect on Outside Competition

The function of quantity surveying when carried on by an association, is generally limited in two ways. First of all, it is limited in the amount apent on it. Second, it is limited in its use to members. The very competition which needs it most in order to make of this competition good competition is frozen out of its use and continues to rely on old methods and without great skill in many cases.

Quantity Survey Will Not Make Contractors

A good set of quantities will not enable an inefficient firm to become good contractors. The only effect it will have on such a firm will be to influence their bid to be in line with reason. This is exactly what we are looking for—to have bids in line with reason. If we can spread before the inefficent contractor the proper picture of how much he is undertaking, we have gone far to rob his competition of its terrors. We cannot guarantee that he will not plunge and go broke, but at least we have furnished him with the proper information so that if he has any sense at all, he will be bidding on the same thing we are.

Eliminates the Wildcat Bidder

A quantity survey of a job sold to all the competing bidders is a real remedy for the ills of wildcat bidding. There is no danger in such dissemination of quantities. There is no possible chance of an undermining of the contractor functions.

Many contractors have entertained the idea and some continue to do so, that if the commercial quantity survey bureau gets to be a real institution it will seriously encroach upon their business. Nothing can be farther from the facts of the case. Let us see why. The independent bureau itself cannot go into the contracting business without ceasing to be a bureau. If a man capabale of running a bureau seeks to go into contract, he does not have to set up an expensive quantity bureau as the entering wedge. There are shorter ways to get in. The bureau cannot by giving its service make any new contractors who would not otherwise be made. The proof of this is abundant. Where is the single case of where anyone has been prohibited from taking a plunge into contracting because he could not procure an estimator. There is no such case. Then what is left that can be detrimental to general contracting or an encroachment upon it? The only thing left is the fact that some wildcat bidders may by use of the bureau become less wildcat. Will this perpetuate the wildcatter? It will not unless he at the same time develops an efficient organization. It is axiomatic that if all bid more intelligently, the best chance lies with the best organzation because of the practical efficiency in that organization.

The most forward step the industry can possibly take, in our humble estimation, is to recognize the new function which evolution has created as an independent function which, rightfully propagated, will grow to offer the very service which will be the remedy for wrong competition.

Commercial Surveyor an Asset to the Industry

All men in the construction industry can well speed the day when the acceptance of the commercial quantity survey by a contractor will be thought of as an asset in his favor. Where it will be thought of as necessary for all contractors bidding on a job to procure a quantity survey of that job, then will guessing on quantity pass into the discard. Price is a potent factor in building construction. Price is only legitimately based on using the same quantities and is not legitimately based on individual poring over plans and taking off each firm to its own weakness.

HOW DO YOURS COMPARE WITH THESE

Here Are the Hourly Wage Scales Prevailing in Chicago Building Circles

It may interest Indiana building contractors to glance over the wage scales of the various building trades as they now rule in Chicago. There is certainly a wide range with $1.75 for several of the trades topping the list and $ .97½ for laborers coming in at the bottom.

These figures are taken from the Monthly Bulletin of the Building Construction Employers Association of that city:

Architectural Iron Workers	$1.62½
Asbestos Workers	1.62½
Boilermakers	1.62½
Bricklayers	1.70
Bricklayers, Fireproofers	1.70
Caisson men (diggers)	1.27½
Caisson men (windlass; nigger-heads)	1.12½

Terrazzo Laborers	1.07½
Terrazzo Helpers (Operating Machines)	1.15
Tuck Pointers	1.70

HOW HIGH IS TOO HIGH?

Economic Rather Than Physical Feature Seems to Answer the Question

A study just completed by experts of the American Institute of Steel Construction reports that it is structurally possible to build skyscrapers 2,000 feet in height, but that considerably less than that—around seventy stories—is the economic limit.

The experts figured that a 2,000-foot building would not pay. On the other hand, where land values are high, they assert it pays better to erect a tower of sixty or seventy stories than one of half that height.

All of this, of course, is from the standpoint of the building owner. The thing now needs to be figured from the viewpoint of the city as a whole. It is a grave question whether the giant skyscraper may not do a city more harm than good by increasing traffic past the saturation point. What is needed is a study that will show just how many skyscrapers the large city can bear.—(Kokomo, Ind., Tribune.)

Sana-bestos Tiles

Answer Every Question You May Ask About Flooring

THEIR moderate cost, beauty and permanence make Sana-bestos Floor Tiles the ideal flooring for schools, churches, hospitals, stores, apartments and homes.

A Sana-bestos floor is noiseless, resilient, easy to the tread, yet wears like stone. Sana-bestos Floor Tiles are especially desirable for severe service.

Inexpensive: Moderate first cost, no upkeep expense.

Easily and Quickly Applied: Over any new or old sub-floors by an average workman.

Durable: Sana-bestos Tiles are non-dusting, fire, water and acid-proof. They preserve their fresh appearance through years of terrific wear.

Sanitary: No waxing or oiling—simply wash with water.

Distinctive Appearance: A variety of rich colors that harmonize with any artistic layout, including Black, Maroon, Red, Brown, Green. (Sana-bestos Tiles cannot be made in light colors.)

Guarantee: A uniformly standard product. Every shipment tested and inspected.

Sana-Bestos Heavy Duty Tiles—Sana-bestos Tiles for industrial use, are manufactured ½ inch in thickness. They may be laid either in our special plastic cement or in concrete. When laid in concrete, they may be used out of doors as well as indoors, with excellent results.

1134 Hume-Mansur Building Indianapolis, Ind.

AN UNUSUAL OPPORTUNITY OPEN TO INDIANA ARCHITECTURAL DRAFTSMEN

To Be Given Special Prominence At Annual I. S. A. Exhibit

As a means to encourage more interest in sketching and to develop that art to a higher degree among the embryo architects of the state the Indiana Society of Architects will add to its annual Architectural Exhibit in February a department of pencil sketches. And in order to attract the draftsmen to this line of endeavor several special awards will be offered for the best exhibits displayed.

Last year some pencil sketches were submitted by draftsmen of the Indiana architectural offices and attracted a great deal of attention, in fact were so attractive that the Society decided to make this one the feature of the 1930 exhibit. Lee Burns, 241 N. Pennsylvania street, Indianapolis, chairman of the Pageants and Exhibits Committee is working to that end and has sounded an appeal to all the architectural draftsmen of Indiana to give serious thought to this matter.

Mr. Burns calls attention to the fact that sketching is a pleasing pastime, is a delightful avocation and affords excellent training for the architect. He further reminds those interested that scattered over the state is a wealth of appealing old buildings, some of intense historic interest, that afford excellent material for sketching purposes, and should not only be preserved in sketch books but would also be interesting subjects for just such a display as is contemplated for the approaching annual exhibit. Among the things suggested are artistic old doorways, village churches, picturesque farmhouses, old homesteads and interesting interior details, all of which are eligible for entry. So meritorious are the details in some of the structures of by-gone days that Mr. Burns advances the suggestion that these may well be converted to measured drawings for exhibition purposes.

George W. Allen, president of the Indiana Society of Architects, who does fine sketch work himself, is very enthusiastic over the proposed new feature of the annual exhibit and has offered as an award for the most meritorius architectural sketch done by a draftsman in 1929 a set of architectural books to the value of $25.00, same to be selected by the winner. Also there will be a second award of $10.00 in books and honorable mention for other sketches.

It is hoped that this part of the exhibit will be one of the outstanding features of the annual event. While no restrictions are placed upon size at the same time for the sake of uniformity of display it is suggested that all sketches be on paper approximately 12x15 inches or mounted to that size as near as possible.

As a tip to the draftsmen who may be interested Mr. Burns advances the idea that every day in the year is good sketching weather and not to forget that any number of sketches may be entered in the I. S. A. architectural exhibit.

Here is a chance for the draftsmen of Indiana to step forward and make his bow, and also contribute his bit to making the annual display of the Indiana architectural profession an artistic success.

ALWAYS WORKING FOR THE ARCHITECT

That Is the Indiana Society of Architects

To understand one must know, and because there are men who do not know they do not understand. Such is the situation as regards the Indiana Society of Architects. First, last and all the time it is an organization in the abstract, an association pursuing an ideal, and that ideal is the protection and the advancement of the interests of the Indiana architectural profession as a whole. There is nothing personal about the organization, its past record bears out that contention. Every move made has been in the interest of all architects, not just a few, and it has even gone farther in that it has never failed to join forces with allied building interests in all proposed constructive moves for the good of the whole building industry.

One of the frequent objections voiced against the Society is that it is more or less a clique selfishly seeking to further its own interests. However, when one gets down to bed rock he finds invariably that the so-called clique to whom objection is raised is composed of the real workers in the Society, the men who steadily have given of their time, effort and even money that the organization might succeed and stand as a sentry when inimical influences sought to slip in to intrude upon the architectural profession or crowd it into the background.

Regardless of the individuals who go to make up its membership the Society has always stood "four square" for the architect has "gone to the bat" many times in emergencies and in "the pinch" has delivered. It has proposed, sponsored and co-operated in various programs that have resulted in the greatest constructive and progressive moves ever directed in the interest of the building industry in Indiana, nor have such efforts failed of achievement. The records of the past twelve years reveal an impressive list of such successes.

In line with that aim and purpose the Society will hold a regional meeting at Evansville December 6, for the architects in southern Indiana, but at the same time an invitation is cordially extended to all Indiana architects to attend the proposed meeting. It is through such functions as these that Indiana architects are afforded a personal and social contact on a comprehensive scale, a contact available through no other channel.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY.

The Link Belt Company, Indianapolis, gave Structural Steel the preference in framing this addition to one of their Indianapolis plants. Steel fabricated and erected by Hetherington & Berner, Indianapolis.

Steel Serves Best I

Steel — cut to fit, ready to go into place — requires no elaborate preparations, causes no delays. Steel is strong — it is not encumbered with excessive bulk — so it saves labor and reduces the amount of material to be handled. Greater still is its advantage of occupying less space — it permits the maximum of useful floor areas. Steel brings assured economies to the erection of every type of building — large or small.

Then — after the building has been in service it may be

ly Type of Building

necessary to remove elevators and stairways to other parts of the building or to install new ones; strengthen floors, columns and foundations to support increased loads; raise or lower existing floor levels; shift the position of, or remove a column; reframe floor construction to resist impact forces — an endless number of conditions that require careful study and tax the ingenuity of engineers.

Here again, Steel proves conclusively its unquestioned supremacy. To protect your best interests, give Steel the preference in all construction.

Sealed Proposals

COURT HOUSE BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the undersigned, Board of Commissioners of the County of Lawrence in the State of Indiana, has adopted plans and specifications for the erection and equipment of a Court House on the Public Square in Bedford, in said county. That said plans and specifications are now on file in the office of the Auditor of said county, and that up to 10:00 o'clock a. m. on December 21, 1929, sealed bids are invited and will be received by said Board in the Commissioners' Room in Bedford in said county and state for the construction and equipment of said building, and that on said day the contract therefor will be let to the lowest and best bidder or bidders; said Board of Commissioners reserving, however, the right to reject any and all bids.

Bids may be submitted in accordance with the following classifications:

A. General Construction.
B. Plumbing.
C. Heating.
D. Combined B and C.
E. Electric Wiring.
F. Electric Fixtures.
G. Combined E and F.
H. Metal Equipment Furniture.
I. Stationary Wood Furniture.
J. Movable Wod Furniture.
K. Combined I and J.
L. Combined H, I and J.

Each bids to be filed with the Auditor and must be accompanied by a good and sufficient bond, payable to the State of Indiana, to the approval of the Board of Commissioners, in an amount equal to each bid; conditioned that the bidder will, if awarded the contract, promptly enter into a contract with said Board in accordance with said bid, and in accordance with the plans and specifications on file, and prepared by Walter Scholer, Architect, Lafayette, Indiana, and will build and construct said work in accordance with said plans and specifications.

Each bidder shall submit under oath with and as a part of his bid a statement of his experience, his proposed plan for performing such work and the equipment he has available for the performance of such work, a financial statement, and a non-collusion affidavit.

The estimated cost of said building and the equipment therefor is Three Hundred Ninety Thousand Dollars ($390,000.00).

Said plans and specifications may be seen and inspected at the Auditor's office in the Court House, in the City of Bedford, in said county. Contractors desiring plans and specifications may secure the same from the Architect, Walter Scholer at Lafayette, Indiana.

Witness our hands, this 5th day of November, 1929.

Mart Smith,
Kern Armstrong,
Curt Sowder,
Board of Commissioners of
Lawrence County, Indiana.

Attest:
John H. Taylor, Auditor.
Nov. 16-23

GENERAL BUILDING RETURNS FOR COUNTRY SHOW OCTOBER VOLUME AHEAD OF THAT OF SEPTEMBER

Too Early at Present to Gauge Effect of Stock Market Flurry on Building Activities

Building permits issued in October in 584 leading cities and towns of the country amounted to $250,583,028, according to official reports to S. W. Straus & Co. The same centers in October, 1928, issued permits valued at $292,359,188. The loss was 14 per cent. The October total, however, was a gain of 15 per cent over September when the identical 584 places showed a volume of permits amounting to $218,109,584.

The total of permits issued in this list of cities for the first ten months of the current year was $3,031,752,558 compared with $3,294,933,307 for the same period in 1928 and with $3,334,278,499 for 1927. The loss from last year was 8 per cent and from 1927, 9 per cent.

It is to be borne in mind that recent changes in the money market and the heavy liquidation in the stock markets came too late to be reflected in the October building permit records. If these phenomena are to affect the trend of building activities throughout the nation, they may begin to show such effects in the November records. The view seems to be quite generally held in the industry that better conditions are in prospect but such a readjustment, if it comes, will not come speedily and there may be no reflection of improved conditions in the November reports. Inasmuch as the first indication of a changing tendency will manifest itself in the building permit index, these data during the next few months will be awaited with unusual interest.

Recognition is given to the fact that the scope of building operations will for some time to come have a pronounced reaction on the country's general business situation. Other lines, notably the automobile industry, have been going at top speed and now in more recent weeks have shown slower tendencies. Meanwhile building operations have been proceeding at a greatly slackened pace. It is strongly to be hoped, therefore, that the building industry will now prove a sustaining influence to general business. There is reason to feel that such will be the case inasmuch as the partial cessation of building work during the last year and a half has created a wholesome fundamental situation. The country could, it is felt, stand a more intensive building program at this time without danger of disturbing the delicate balance of supply and demand.

The Labor Situation

Considerable unemployment exists among building craftsmen, although with a changed market situation more funds will likely be released for building development so that the outlook is not as bad as present facts indicate. According to the Building Construction Employers Association of Chicago, one-half of the building mechanics of the city are out of work, and while a definite check is not available on numerous other cities, it is safe to estimate that with decreasing building permits throughout the country generally in the last several months unemployment in the trade extends pretty much over the country.

Jurisdictional disputes among the trades continue to be the source of some difficulty, but fortunately a report is current that the Building Trades department of the American Federation of Labor is contemplating some action to relieve both workers and contractors of the risks of jurisdictional trouble. During the month, considerable adverse criticism in labor circles has arisen over the practice of some employers making a wage agreement with one trade to the effect that wages will be governed by the wage rate of other trades having negotiations under way with their own employers. The Lathers union in Chicago, demanding from employing plasterers the right to name their own foreman, raised an interesting question in labor management.

Material Markets

During the last month some weakness was shown in practically all building materials, particularly in cement, common brick and certain lumber items. For the country as a whole, the structural steel market was slightly weaker in spite of heavy orders in the New York area.

BUILDING CONGRESS AT INDIANAPOLIS GETS APPRENTICESHIP CLASSES UNDERWAY

Fifty-Five Boys Started in at Learning Trades

While it may not be as spontaneous as some would like to see it, nevertheless, evidence continues, from time to time, to develop demonstrating that the encouragement of apprentices, both by the building construction employers and the Labor Unions, is being supported in Indiana.

Only recently at the Trade Show at the State Fair Grounds at Indianapolis the State Fair Grounds at Indianapolis quite a delegation of brick laying apprentices from Fort Wayne and Indianapolis was on hand and aroused much favorable comment. Those lads are being taught the trade in their respective cities by working part time and studying theory in the high schools.

Now comes further evidence that the development of future building trades mechanics is not being overlooked, in fact, serious thought is being devoted to the matter.

The apprentice problem is one in which the Indianapolis Building Congress is vitally interested, and for some months the Apprentice Committee has been working to get things going in that direction. Success has crowned the initial effort for in the past week two classes for apprentices have been organized and started.

SCREEN, GRILLS, GRATINGS, RAILINGS

2251 Mass. Ave. Phone, Cherry 7626 Indianapolis

There are fifty-five boys enrolled for the work, thirty-five to study as electricians, and twenty to take up plastering. The class work will cover a four years course with two evenings a week given over to study at Technical high school. The practical side will be taken care by employment of students on actual work.

The employers and the Unions in both of these trades are co-operating to the fullest extent to make this venture a success.

Those of the committees sponsoring the work are, for the electrical trades: Gerry Sanborn, H. M. Stradling, C. L. Leet, representing the employers, and Charles Lutz, C. C. Moon, V. Hickman for the Union; for the plastering trade: employers, C. M. McGarvey, R. L. Chalfant, H. W. Cramer; Union representatives, Claude Pierce, Al Thornton, Al Young.

WHAT A ONE-HUNDRED-STORY BUILDING WOULD BE LIKE AND SOME OF THE PROBLEMS ITS ARCHITECT WOULD BE COMPELLED TO SOLVE

Plans Only Tentative But Interesting, Nevertheless

Recently at Indianapolis much interest was aroused in the appearance of Architect Harvey Wiley Corbett, New York City, before the Indianapolis Building Congress, not only because of his international reputation and his connection with the contemplated World's Fair at Chicago in 1933, but because he did big things in an architectural way. Particularly interesting was his association with the proposed Metropolitan Life building in New York City planned, it was said, to arise to one hundred stories.

However it seems that estimate was somewhat exaggerated, hence, the following statement regarding the project, the approach to it and a study of the things involved may be of enlightenment to Recorder readers.

Faced with the problem of providing as nearly as possible ideal working conditions not only for its present force of more than 12,000 home office employes but for as many thousands more as the conduct of its rapidly expanding business may require, the Metropolitan Life Insurance Company, before approving plans for its new building which is soon to rise on the easterly half of the block bounded by Madison and Fourth avenues and Twenty-fourth and Twenty-fifth streets in New York City, has been forced to consider possibilities far beyond the present business requirements. Although the immediate project to be undertaken involves not only the erection of a building of thirty-two stories in height on an area a quarter of the size of the two city blocks which the company already owns and already largely occupies, a thorough study of the complete future development of the entire area has been entered into, a study which foreshadows perhaps, something of what urban architecture may become under the influence of rising land values and the pressure of economic necessity.

President Frederick H. Ecker of the insurance company, in commenting upon the proposed project, says experience has impressed the wisdom of considering the future when laying present foundations, but there is no ambition behind it all, to undertake any building project of greater magniture than the present size and the normal progress of the business, within the safely predictable future, would justify. Past experience has demonstrated that to build in small units without due regard to possibilities of growth is financially unsound.

In considering the permanent development of the proposed site for the new project in mind it has been necessary to study it in relation not only to the building about to be erected but also to a final structure of which this building may be the first unit.

"In making these studies," says President Ecker, "we have not committed ourselves or our successors to the completion of any uneconomic building program. All of the plans proposed for this development are tentative, subject to revision or to rejection in whole or in part. We are interested solely in providing for our own immediate needs, and for such future development, as is already clearly indicated. The heights to which the completed building may be carried depend on the future requirements of space, as well as how high it will be practically feasible to have it rise. We aren't one whit concerned with whether it outtops the present or projected structures on Manhattan Island."

In view of this purpose, it is not at all surprising that the studies made by the company's architects, Dan Everett Waid and Harvey Wiley Corbett, have departed far from tradition and have resulted in the conception of a building so different in its mass and detail as to be startling even to the ultra-modernist. Such a building might be carried to the height of a hundred stories, an obelisk-like structure of glass and steel set on a pedestal of steel and marble.

Despite the fact that such a building may never be completed, that it exists only in the plans and that these plans have not yet been approved in any detail, it is interesting to consider what such a building would be like and some of the problems that its architect have attempted to solve.

Even the ultimate height of the building is tentative. Considering present land values, it has been demonstrated that in New York City at least, it is increasingly profitable to build to the height of seventy stories. Beyond that, the law of diminishing returns becomes operative, construction costs rise disproportionately, usable area contracts, vertical transportation service becomes more costly. A depreciation in land values might lower that limit. An appreciation might raise it. Whether this particular building ever rises to a hundred stories or even to seventy depends on not only these factors but on the question of whether the company's business will eventually reach a point where such an amount of space as one hundred floors offer would be required.

That would be space enough to accommodate 30,000 employes. The problem of moving this large number of people in and out of the building become a complicated one. One solution offered by the architects, is that the first thirteen stories of the building be serviced by moving stairs, as this system of transportation substitutes continuous flow for the intermittent method necessarily used for elevators. Service above the thirteenth floor might be by express elevators from the ground level which would become local from the thirteenth to the thirty-second floors. From the thirty-second to the one hundredth floors it is proposed to have two banks of ten elevators each service the upper portion of the building, one bank running to the seventy-third floor, the other to the hundredth. To provide the additional traffic and parking space that would be necessitated by such a structure, the architects suggest that the sidewalks in the narrow side streets be removed and a wide arcade be provided within the building line extending entirely around the building, serving as a covered way and enabling employees and visitors to reach any of the entrances under cover.

Logically, in such a building the utilities would have to be concentrated as fully as possible in the center at each floor leaving a wide periphery of open space where the various departments of the company could be adequately accommodated. As the departments are large, the internal arrangement would necessarily be one of large spaces which provide for the effective operation and supervision of the departments.

merely dragging thrills of the Indian travois, a crude sledge, or in the primitive ox cart with its wheels made of discs hacked or crudely sawed from the boles of trees. It was not until the age of steam that any vehicle was made chiefly or exclusively of any other material than wood. And one hundred years after the invention of the locomotive no suitable

In building of such a type, the question of adequate natural light for these spaces becomes of pressing importance. The general form of the building must follow the lines dictated by the zoning regulations of the city. The maximum surface areas are therefore predetermined. On this surface instead of placing windows as is customary, occupying less than 50 per cent of the whole surface and recessing these windows within masonry reveals, the architects propose that the entire surface between each steel support should be made of metal and glass, these surfaces being projected somewhat like a shallow bay window, glass being carried to the ceiling level to give the maximum of light.

Beginning at the grade level, they would have the building rise to the point of the first setback with a marble exterior but above this point it would be entirely enclosed in metal and glass, the corrugated form of the building carrying the vertical accent of the structure from the top of the masonry base to the uppermost reaches of the building.

By placing the windows flush with the spandrels of the floors, these lines, architecturally speaking, would run unbrokenly from base to top. The use of metal for encasing the supporting columns and the spandrels would tend to harmonize the color value with the windows, adding to the interest of the composition as a whole.

For its architectural effect then the building would depend upon this surface treatment and the careful study of the set backs as required by the zoning restrictions, these setbacks being located at points giving a unified rhythm throughout the entire height. Every portion of the building would be usable, including the topmost story, and no extraneous ornament or embellishment which had not a rational meaning and practical use would be added to the structure.

Not fashioned after some predetermined architectural style but essentially a creation of this age and time—the outgrowth of the new conditions with which builders in America must deal, such a building would be a frank expression of those conditions, a rational use of materials suitable for enclosing a steel frame structure. It would stand as a modern interpretation of the American building problem unhampered by archeological precedent.

WOOD, LUMBER, HAS PLAYED A TREMENDOUS ROLE IN THE PROGRESS OF THE HUMAN RACE

Man Dependent Upon It from Far Back Across the Ages

RICHARD G. KIMBELL, Architectural Supervisor
National Lumber Manufacturers Association

The greatest discovery the human race ever made was the discovery of the making of fire. It may almost be said with certainty that the invention of fire-making processes proclaimed the emergance of man from the status of the anthropoid ape. At any rate the traces of primitive man—the dawn-man and the Neanderthal —going back perhaps 250,000 years, are commonly associated with evidences of fireplaces. It was with wooden instruments or with flint and wood that the newly evolved lord of creation made his first fateful fire and it was wood that fed the flames and furnished the sole food of all his rising successors down to the seventeenth century of our era. So if fire was the greatest discovery, wood was the indispensible material of its accomplishment and practical application.

But even before he discovered fire-making, man had learned to extend his physical powers through the use of implements and weapons, and these at first were wood and nothing but wood, unless we except throwing stones. The use of shaped stone implements, almost always associated with wood, undoubtedly followed instead of preceded those of wood. The first huts were made from the branches of trees following man's emergance from dark unhealthful clay and rock caves. When flint tools had been developed, wood was the first building material man learned to work, shape and use for better shelter. The first instrumentality of navigation was a stick, or raft, of wood, and the first boat was doubtless a dugout canoe. The whole history of the development of water transportation up to the middle of the nineteenth century is one of improving utilization of wooden vessels. For five or six thousand preceding years of civilization it was the "walls of wood" in war and the galleys and ships of commerce in peace that made highways of the waterways of the world.

As for land transport the first step from the mere use of unequipped animals was through the use of wood, whether in the substitute has been found for the wooden cross ties. Our trails for the iron horse literally rest in wood.

So we may say, since that remote age when man became man, we have been dependent on wood for warmth, the preparation of food, and all the industrial processes in which the application of fire-produced heat is necessary, for shelter to a large degree, and for most of the tools, weapons, implements, and machines by which civilization advanced. Even to this day wood remains the chief fuel material for domestic use in such an advanced country as France. Amazing though it may seem, here in the United States, probably one-third of all the material derived from the forest goes to furnish fuel. More wood is used each year to heat the houses of the American people than to build them.

Lumber-making is the preparation of wood for use in the industrial arts. And, although it has been an, if not the, essential basic industry of mankind over a large part of the world for countless ages, it has not been what we would call a manufacturing industry until comparatively recent times.

The first form of lumber making was merely the splitting and hewing of severed logs. The home of our Saxon ancestors in England were made of wood thus crudely shaped. And such were their habitations almost exclusively as late as the Norman conquest. The next step followed the improvement of the handsaw and the introduction of pitsawing, wherein, either by placing the log over a pit or raising it on a trestle, two men, one above and the other below, laborously sawed the boards and timbers for houses, ships and manufacturing uses. Sawmills using some sort of mechanical power, were introduced on the continent of Europe many centuries ago, but there was no sawmill in England when the first colonists came from that country to America, because the hand sawers would not permit their introduction for fear of losing their jobs.

Sawmills were established in America almost coincidentally with settlement—certainly as early as 1631 in Maine and probably in Virginia before 1620 and in New York in 1623—though millwrights had to be brought from Holland and Germany. Of course, there was much pitsawing in this country in the early days and it still persists in the Appalachain

PUBLICITY
DECEMBER SIXTH
EVANSVILLE

One item relative to the sale and distribution of plans, specifications and service (otherwise denominated "the Practice of Architecture") which inevitably receives the attentive ear of the profession as soon as it is brought out into the light is the misused, abused, battered, and decrepit item—"PUBLICITY."

And, of course, it is an item—a real integral part—of architecture. Shrink, if you will, from the harsh uninviting sound of this word. Draw the unsmeared, lily clean robes of your ethics more snugly about you and pull away from the matter of advertising—it nevertheless is with us as a real distinct item in our business. Inevitably and eventually it must receive our attention. Sometime or other we're going to be compelled to answer this matter of publicity which stands out now as a great glaring question mark.

The I. S. A. is at least willlng to recognize the existence of the question mark. We have a Publicity Committee of which a certain energetic individual from the energetic community of Evansville is chairman. Betwixt the upper millstone of a lean I. S. A. pocketbook and the lower millstone of a depressed profession because of lack of publicity, our ambitious committee is in a most embarrassing position. However, they are attempting to work out a scheme which will achieve the two very desirable functions of not spending an excessive amount of our cash resources, and at the same time present to the knowledge hungry public a little news relative to Architecture and how it is done.

Our neighbors—north, east and west—have arrived at a point of recognition of the fact that we are living in a different age than we were a few years past. Methods of competing for the clients dollar has become a matter of competition of industries. It's the building industry versus the gambling hell of Wall Street or the Automobile industry, etc., etc. These neighboring states, realizing that their methods must be adjusted to suit the times, have undertaken to answer the question spoken of above. We are justified in believing that in reaching a decision relative to methods, that the matter was studied very carefully. We can visualize the conservative old long beards of Illinois scratching heads, and corrugating brows over cons and pros of their problem, and eventually arriving at very positive conclusions.

The fact that these very good men to right and left of us have concluded that something must be done, is proof sufficient that we can not sit back in smug disdain and pooh, pooh. So Mr. Bacon is checking up on the reasons for and the results expected from these publicity programs. Just what was it that lead Illinois to conclude that the thing which they are doing is the proper way to reach their public? And, much more interesting, just what response are they getting and thus far what can they expect as a net result? Mr. Bacon will report at Evansville.

There is nothing more vital to our profession, or that should more intensely interest us than this one item. If you aren't stirred as you think of the possibilities of group publicity, you're professionally dead; you aren't in step with your times; and you should be technically shot at sunrise. The starting of a definite policy may come out of this meeting—and it concerns the pocketbook and the professional future of each one of us. You should be there to help shape this policy.

All of which is just one of the important and interesting things which are to be a part of the Evansville meeting. Look for the complete program and plan definitely for this date.

THE ANNUAL I. S. A. ARCHITECTURAL EXHIBIT

Give It Some Thought from Now on and Help to Assure Its Success

February, at this time, seems quite a distance in the future and yet it will be upon us all too soon. Can't you recall, it seems but yesterday that summer was just over, we were into September and Thanksgiving and Christmas, though ahead, were of little concern to us, there was plenty of time in which to make plans for those events? Where the weeks have gone it is hard to figure, but they have come and gone. Thanksgiving is at hand and Christmas is just around the corner. Thus time speeds on.

And so it will be. In February the Indiana Society of Architects will hold another Annual Architectural Exhibit and now seems an opportune moment to advise the state architects of that fact that they may give definite thought to the submission of exhibits for display and have time in which to prepare such exhibits.

These annual exhibitions have improved steadily with the years, both in scope and artistic merit. They have carried an appeal and been well attended by the public during the period of display, and have been most favorably commented upon by the public and the press. These affairs stand forth and speak clearly for the ability of Indiana architects and certainly, to say the least, are deserving of the support of the members of the architectural profession in the state.

In other words, the time has come for you Indiana architects to begin to think of the annual exhibition and lend your aid to make the 1930 exhibit a greater success than ever.

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

*High School Building: $800,000.00, 3-stys. and bas., "Irvington High School," located at Riley avenue and East Washington street, Indianapolis. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Mech Engrs., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. Plans completed, new bids will not be received until Spring 1930.

*Apartment Building (90 Apts.): 3-stys. and bas., 120x150, northeast corner Boulevard Place and McClain Place, Indianapolis. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Owner, Joe Rand Beckett, 303 Peoples Bank Bldg. Will probably not mature until spring 1930. Brick, fire-resisting construction, hollow tile or cinder block, stone trim, composition built-up roof, wood floors, composition floors in corridors, steel stairs, steam heating plant, wood sash, incinerator, in-a-door beds, stoker, cabinet units, stoves, ice boxes.

*Administration Building and Hangars: $100,000.00, Ben Davis, Ind., 6.7 miles west on National road. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Owner, City of Indianapolis, Municipal Airport Department, Paul Moore, superintendent, 207 City Hall. Plans about completed, may receive bids soon. Brick, concrete and steel.

*Hospital Building (service building, laboratories, out-patient building): $516,-000.00, City Hospital, 960 Locke street, Indianapolis. Archt., Robert Frost Daggett, 922 Continental Bank Bldg., Indianapolis. Mechanical engineer, Charles B. Ammerman, 925 Continental Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of Health; Dr. Herman G. Morgan, secretary, city hall. Plans about completed; bonds are to be sold December 2d and bids probably will be received on construction to December 23d. Brick, reinforced concrete and steel construction.

*Factory Building: $200,000.00, 1 and 2-stys. and bas., (103,000 sq. ft. of floor space). Martindale and Roosevelt avenues, Indianapolis. Archt., Charles E. Bacon, 605 Odd Fellows building, Indianapolis. Owner, U. S. Corrugated Fibre Box Company, H. J. Lacey, president, 1315 Martindale avenue. Work well under way; general contractor, Ben Bass, 4003 North New Jersey street, Indianapolis. Architect will be ready to receive the plumbing, heating and electrical wiring bids soon. Reinforced concrete exterior walls, composition built-up room, steel sash, steam heating system, concrete floors.

*Warehouse Building: $60,000.00, 1-sty., 106x160, Martindale and Roosevelt avenues, Indianapolis. Archt., Charles E. Bacon, 605 Odd Fellows Bldg., Indianapolis. Owner, U. S. Corrugated Fibre Box Company, H. J. Lacey, president, 1315 Martindale avenue. Work well under way; general contractor, Hall Construction Company, 405 Board of Trade Bldg. Architect will have plans on the plumbing, heating and electrical wiring ready soon. Brick, structural steel, concrete slab roof, composition built-up roof, steel sash, concrete floors.

*Grade School Building: $147,000.00, 2-stys. and bas., Public School No. 81, located at 19th street and Parkway boulevard, Indianapolis. Archt., Kopf and Deery, 620 K. of P. Bldg., Indianapolis. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. Plans completed; will not receive new bids until spring, 1930.

*Grade School Building: $147,000.00, 2-stys. and bas., Public School No. 82, located at English and Emerson avenues, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. Plans completed; will not receive new bids until spring, 1930.

*Shelter and Bath House: $75,000.00, Dunes State Park, La Porte county, Indiana. Archt. Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Owner, State of Indiana, Department of Conservation, Richard Lieber, director, State House, Indianapolis. Starting work; general contractor, Mustard-Curry Building Corporation, Bloomington. Bids on heating, plumbing and electrical wiring in under advisement.

*Sorority Chapter House: 3-stys. and bas. 61x72, Butler University Campus, Indianapolis. Archt., Burns and James, 314 Penway Bldg., Indianapolis. Owner Kappa Kappa Gamma Sorority, Mrs. Everett Schofield, chairman of building committee, care of architect. Bids in under advisement. Brick veneer, cinder block, reinforced concrete, structural steel, slate roof, steel sash, tile and marble work, toilet and shower compartments, Bedford stone trim, insulation, sheet metal work, concrete floors, pine floor, oak floor, linoleum, fireplace, steel chairs, cabinets, electrical fixtures, vapor steam heating plant.

***Public School Building** (addition): $50,000.00, 2-stys. and bas. (School No. 15), located at 501 North Beville avenue, Indianapolis. Archt., W. H. Albersmeier, 508 Rauh Bldg., Indianapolis. Mech. Engr., Bevington-Williams, Inc., 1139 K. of P. Bldg., Indianapolis. Owner, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. Plans completed; will not receive new bids until spring, 1930.

***Public School Building** (addition): $45,000.00, 2-stys. and bas., School No. 49, located at 1902 West Morris street, Indianapolis. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Mech. Engr., W. A. Breining, 909 Roosevelt Bldg., Indianapolis. Owner, Board of School Commissioners, Charles C. York, business director, 150 North Meridian street. Plans completed; will not receive new bids until spring, 1930.

***Store Building** (fire rebuild, entire building): 3-stys. and bas., 35x191, 127 South Meridian street, Indianapolis. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Owner, L. M. Wainwright, 4014 Washington boulevard. Lessee, Central Wall Paper and Paint Company, 127 South Meridian street. Temporarily in abeyance, probably will mature soon. Brick, slow-burning heavy timber construction, structural steel, steel stairs, wood floors, wood sash, metal lath, metal ceiling, copper set store front, plate glass, automatic sprinkler system, two freight elevators, steam heat, plumbing, electrical wiring.

Store Buildings (2 rooms): $7,000.00, 1-sty. and bas., 32x72, State and Lexington avenue, Indianapolis. Private plans. Owner, Grinslade Construction Company, 1117 Peoples Bank Bldg. Plans completed; owner builds and awards sub-contracts. Brick, stone trim, wood joists construction, composition built-up roof, steel sash, copper set store fronts, plate glass, wood floors, plumbing.

Store Building (2 rooms): $5,000.00, 1-sty. and bas., 25x61, 4001 East 10th street, Indianapolis. Private plans. Owner, Grinslade Construction Company, 1117 Peoples Bank Bldg. Plans completed; permit granted; owner builds and awards sub-contracts. Brick, stone trim, wood joists construction, composition built-up roof, steel sash, copper set store fronts, plate glass, wood floors, plumbing, electrical wiring.

STEEL INSURES STRENGTH AND SECURITY

STEEL
"Carries On"

Steel's usefulness does not end with the demolition of the building which it frames.

Here's one striking example. This unusual picture shows the demolishing of the old Columbia Club in Indianapolis, torn down to be replaced by a greater home for that organization. The old steel frame, originally erected by Hetherington & Berner for Wm. P. Jungclaus, general contractor, was completely salvaged. After thirty years, the steel work had the original paint, job number and plan marks on the beams in many cases. There was no deterioration from rust or any other cause. Ninety-five per cent of that original steel has since gone into other construction work.

What other building material can match a record like this? It is merely a common story with Steel.

Sealed Proposals

COURT HOUSE BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the undersigned, Board of Commissioners of the County of Lawrence in the State of Indiana, has adopted plans and specifications for the erection and equipment of a Court House on the Public Square in Bedford, in said county. That said plans and specifications are now on file in the office of the Auditor of said county, and that up to 10:00 o'clock a. m. on December 21, 1929, sealed bids are invited and will be received by said Board in the Commissioners' Room in Bedford in said county and state for the construction and equipment of said building, and that on said day the contract therefor will be let to the lowest and best bidder or bidders; said Board of Commissioners reserving, however, the right to reject any and all bids.

Bids may be submitted in accordance with the following classifications:

A. General Construction.
B. Plumbing.
C. Heating.
D. Combined B and C.
E. Electric Wiring.
F. Electric Fixtures.
G. Combined E and F.
H. Metal Equipment Furniture.
I. Stationary Wood Furniture.
J. Movable Wod Furniture.
K. Combined I and J.
L. Combined H, I and J.

Each bids to be filed with the Auditor and must be accompanied by a good and sufficient bond, payable to the State of Indiana, to the approval of the Board of Commissioners, in an amount equal to each bid; conditioned that the bidder will, if awarded the contract, promptly enter into a contract with said Board in accordance with said bid, and in accordance with the plans and specifications on file, and prepared by Walter Scholer, Architect, Lafayette, Indiana, and will build and construct said work in accordance with said plans and specifications.

Each bidder shall submit under oath with and as a part of his bid a statement of his experience, his proposed plan for performing such work and the equipment he has available for the performance of such work, a financial statement, and a non-collusion affidavit.

The estimated cost of said building and the equipment therefor is Three Hundred Ninety Thousand Dollars ($390,000.00).

Said plans and specifications may be seen and inspected at the Auditor's office in the Court House, in the City of Bedford, in said county. Contractors desiring plans and specifications may secure the same from the Architect, Walter Scholer at Lafayette, Indiana.

Witness our hands, this 5th day of November, 1929.

Mart Smith,
Kern Armstrong,
Curt Sowder,
Board of Commissioners of
Lawrence County, Indiana.

Attest:
John H. Taylor, Auditor.
Nov. 16-23

LUMBER

(Concluded from Page 6)

mountains in the southeastern part of the country, where home-made lumber still survives. The mechanical saws then used were very simple and crude and were propelled by water power, the countryside sawmill and gristmill were frequently housed together. One of these early mulay mills did well if it turned out three or four hundred feet of lumber a day. Then followed the introduction of sash saws and of several parallel saws in a sash or frame and at the beginning of the eighteenth century there were mills in New England that could produce 4,000 to 8,000 feet of lumber a day. Compare these with the great million-feet-a-day mills of today. And from being purely local mills, conducted much as the grist mill was, sawing on order and frequently operating on logs supplied by the customer, these mills soon began to manufacture stock, for general merchandise and even for export. Indeed, by the end of the seventeenth century, lumber was the chief export of New England.

It was not, however, until our own century that lumber manufacturing became a highly technical, thoroughly machined and extensively organized industry, necessitating large capital, extensive plants and employing large numbers of workers. The beginning of this era was marked by the introduction of the circular saw, the application of steam power and of improved machinery for removing logs from the forest, conveying them to the saws and taking the product from the latter. Further developments have been the introduction of the gang saw, a variety of secondary saws and the use of electric power. As late as 1840 the entire output of power-made lumber in America did not exceed one billion feet. Ten years later it had risen to eight billion feet, in response to the swarming of population in the Mississippi Valley, and in the cties of the east. From that time on the industry expanded until it came to muster 30,000 mills, great and little, and now produces between 30 and 40 billion feet of lumber annually.—(Excerpt from address delivered before Indiana Building Congress.)

URGES SAFETY CODES AS PART OF ALL CONTRACTS

"Safety First" Must Be Made to Mean Something if Industrial Accidents Are to Be Reduced to a Minimum

"Carelessness" is the one word that covers all accidents when the employer is talking. "Speeding up and utter absence of safety facilities, neglect of common safety equipment" is the workman's answer.

The writing into all labor agreements and building contracts of the recognized national or local safety codes for the building industry is thus essential, in the opinion of the commissioner of labor statistics, Ethelbert Stewart. Where there is no safety code, the commissioner urges that one should be agreed upon between the employers and employes, and incorporated into the contract. His statement, as published in a recent issue of the Monthly Labor Review, follows:

"To those of us who view the matter of accidents entirely from the outside and who are really trying to prevent industrial accidents, the amount of truth, if any, in either one of the stand-pat positions is very difficult to ascertain. When the employer says you can not write into a safety code protection against the human element in accident causation, we who view the matter from a purely disinterested point of view know there is just as much human element on the employers' side as on the workers' side.

"No doubt ignorance of what constitutes safety is a major element in industrial accidents in the case not only of a vast majority of the contractors, particularly the smaller ones, but also of the workers. Carelessness is equally divided.

"It is all right to say that no contractor wants to hurt his men physically, but it is just as apparent to outside observers that no workman wants to get hurt. The real effect of all the charges and countercharges is to delay constructive accident prevention.

"It is here proposed that the recognized national or local safety codes, where there are such, be written into every collective wage agreement as a part of the wage contract. Where there is no national or local safety code, then a safety code which shall be agreed upon between the employer or employers' association and the employes or the employes' association shall be developed and written into the contract.

"This accomplished, the plea of ignorance can not be made. 'Carelessness' becomes a direct violation of the contract and can be handled as such.

"This is just as applicable to company-union agreements as it is to trade union agreements; and where there is no agreement at all, the courts would probably for the most part hold that such agreements written into trade union and company union agreements were indicative of the established custom of the industry and were binding upon employes and workmen whether or not there was any agreement.

"In the building trades, where apparently a few individuals, through tactics that need not be here described, have been able to prevent any agreement as to what shall constitute a building safety code, the matter can be controlled through the architects.

Protection of Owner

"The architects' association has a safety code, probably the most perfect one for the construction industry in existence. Why it is kept locked up in their offices it is extremely difficult for a man on the outside to understand. But this Middle Ages attitude of secrecy may be overcome —in fact it seems to be gradually being overcome.

"Once this is done the architect, who after all is the man who writes the contract between the builder and the owner, can write the safety code into the contract as an integral part thereof. And while this does not immediately connect the building contractor up with the workmen, it does give the owner who does not care to have his home or his office building erected at the expense either of making widows or of breaking men's arms and legs a direct means of attack upon the careless contractor through the contract. Perhaps nothing would so quickly form a foundation for intelligent action on the part of the contractors.

"This method would likewise answer the objection which the building contractors make to a national code, which is that these codes would immediately be written into the statutes of the various states and made a part of the building inspection, which would be administered by trade unionist appointees of governors who were catering to the labor vote.

"This charge, which some of us have heard for fifty years, does not seem worthy of answer at this time. However, it would not be necessary for legislatures to pass building safety codes if such codes were written into every contract and could be handled by the courts direct.

"One objection—and every man who does not want to pay attention to safety methods will find some objection—is that many of these safety codes are so long that it would be a serious inconvenience to write them into agreements and that this would be particularly true of individual building contracts.

"The answer to that is that a fairly large percentage of these safety codes can be secured from the government free of cost and that the contract itself need only refer to them as, for instance, that Bulletin No. 436, Safety Code for the Use, Care, and Protection of Abrasive Wheels, published by the United States Bureau of Labor Statistics, be made in whole and in detail a part of the contract.

Method Is Economic

"It would be infinitely cheaper for the state to print and issue free a sufficient number of copies of any code, to be made a part of individual contracts, than it would be to enact a state law with the attendant legislative expense. It would be cheaper for the insurance companies and the monopolistic state fund compensation states to issue these codes in sufficient number than it would be to pay

the compensation cost of accidents. Besides, some of us are getting tired of the question of cheapness when it comes to unnecessary killing and maiming of human beings.

"Once the writing of safety codes into collective agreements and building contracts becomes a common practice, the courts will gradually drift into an attitude that where this is neglected such neglect is deliberate, and the parties guilty of such neglect, whether they are associations of employers or national or local trade unions, establishments, or company unions, or what not, are on the face of things unusually and culpably negligent as to the common prevailing safety practices.

"As a further step in this direction, if the insurance companies could be induced to write the safety code into the policy issued to every contractor, with the understanding that any flagrant violations of that code or any deliberate ignoring of the code would forfeit the policy, much of the convenient ignorance as to safety methods and safety practices would soon disappear.

"If every agency forming contacts with employers or workers would make reasonable safety codes an essence of that contract—in other words, if everyone would do as well as they know and really make 'safety first' mean something, first in the labor agreement, first in the contract, first in everything—some of us might live to see industrial accidents practically eliminated."—(Bulletin of Master Builders Association of Wisconsin.)

FAULTY PRACTICES AND INCORRECT IDEAS REGARD SOURCE OF SUPPLY HANDICAP LUMBER INDUSTRY

Extensive Effort Put Forth to Overcome Such Obstacles

RICHARD G. KIMBELL, Architectural Supervisor
National Lumber Manufacturers Association

Incorrect use of lumber is a constant source of embarrassment. It should be well known lumber will last forever if kept under favorable conditions, either under water or in a dry atmosphere, but that fungi set themselves up and cause decay when wood is alternately moistened and dried. Nevertheless builders will be found placing untreated or non-durable steps, porch skirts, and sills in such proximity to the ground that they alternately pick up ground dampness and dry out. Grain ends of wood will be found exposed where water can settle in them or flashing may be done in a careless manner that permits water to enter and run down within walls. Besides these fundamental mistakes builders will be found following obsolete and incorrect construction methods —methods under which the material cannot be expected to perform its best service. And in these matters work is found for the architectural advisers of the organized lumber industry. The work the engineers and architects are doing consists in studying out the various faulty practices, devising correct methods and broadcasting to lumber users a knowledge of proper construction methods.

Servicing of customers is a highly important trade extension activity. The radio industry may be having difficulty with some step in the manufacture of cabinets. A merchandise shipper may feel the need for economizing on packaging. The builder of a factory may not understand how he is to solve some problem of material treatment, supply, or use in heavy timber construction. The lumber consultant representing the organized lumber industry is available to show how to avoid the cabinet problem, to study and devise a satisfactory and an economical crate, to aid in solving the stress and framing problems or supply sources of information. Such is a glimpse of yesterday and today. But what of the supply for tomorrow.

Much Misdirected Solicitude

One of the most mischevious canards with which the lumber industry has had to cope is the one which magnifies forest depletion. I have more than once been amused by the touching solicitude and concern evidenced by someone whose forest conservation plea was inspired by a yearning for a signed order for his own material. But you may have assurance of the perpetual supply in adequate quantities of Americas only replenishable, renewable natural resource. This diminishing lumber supply spector should be laid at rest, not with mourning, but with celebration.

Some of our friendly competitors are so zealous in the cause of forest conservation that they have urged the public not to buy lumber in order that there may be more trees. And they have hinted that it is a public offense for the lumber industry to be conducting an energetic trade extension campaign, when they are trying so hard to save the forests that the lumbermen would cut.

In the first place, no one of this age will live to worry about his supply of lumber. The standing ripe forests of today plus the increment of growth at the present rate will easily supply all your needs for 40 or 50 years to come. We have today not less than 2,000 billion feet of saw timber in the United States. You may be surprised to know that that is two-fifths as much of such timber as there was when Columbus first stepped on American soil, nearly 450 years ago. We have at the present time about 500 million acres of land that will have to grow trees for a long time to come if it grows anything of economic value. The ambitious expansion of agriculture in the last two decades of the 19th century and the first ten years of the present century invaded the forests too deeply. Land was taken from the tree for the plow that should never have been so transferred. Thousands of these forest farms have gone back to the forest and more will go. If our population does not increase beyond 150 million, as now seems possible, we shall always have nearly one-quarter of our national area available for forests. On this area, under management, we shall be able to produce yearly considerably more wood than we now consume in every form.

Reforestation a Business

We are just entering the era of forestry or managed tree growing. Paradoxically we could not afford to grow trees until lately because we had so many trees already grown—ripe. One way of putting it is that so long as nature was supplying the saw mills with free raw material nobody could afford to systematically grow trees. He could not compete with nature. The curse of the lumber industry today is that there is so little profit in it that few men are attracted to it as a permanent business. The various lumber trade extension campaigns are veritable reforestation measures. If they succeed—and they are succeeding—the margin of profit in lumber manufacturing will make it profitable to grow trees for the saw. Strangely enough, a lot of good people who don't think very deeply, think that private land owners are going to grow trees for the fun of it. They do not expect farmers to grow pretty grass or fine cows just for their contribution to their natural scenery, but they expect lumbermen to grow trees without reward.

You may rest assured that this country will always have an equilibrium between its lumber production and its lumber requirements. (Excerpt from address delivered before Indiana Building Congress.)

IF ONLY ALL COULD APPRECIATE WHAT ONE HUNDRED PER CENT CO-OPERATION WOULD MEAN

Full Association Support Would Soon Lessen Many Burdens of Building Contractural Interests

When the average contractor is idle, his sole thought is on landing a job. On the other hand, when he is busy, he has no time for organizations. The time arrives however, when Mr. Indifferent Contractor needs assistance and in an excited frame of mind he appeals to some contractors body to straighten out his dilemma. Practically all contractor associations have had countless incidents of this nature brought to their attention, too numerous to elaborate upon. In times of distress such bodies are never found wanting in going to the aid of a member.

The building business is one of the most individualistic of callings. Just like a well functioning organization, the success of any contractor is dependent upon the self reliance, judgment, experience and aggressiveness of the individual. Since association's inceptions all have come in contact with many of the "go-it-alone" type, however, it is becoming more apparent that the day of the "lone wolf" is passing.

The contractor associations almost without exception have been concentrating tireless energies exclusively for the betterment of the building industry. Locally the association is generally recognized as the one voice of organized contractors and in all of its struggles can be found in the front line trenches fighting for the righteous principles upon which it was founded.

Oftentimes one hears contractors speak of "the good old days of yesteryears." It should not be forgotten that other lines of business enjoyed also "good old days." This world is progressing and modern machinery and methods have revolutionized the building construction industry the same as any other business. Looking ahead is the thinking contractor of today and the student of tomorrow. Sitting around and brooding that business is poor will not make it better. Why not join up with your trade and central body and co-operate with those striving to solve the problems of all contractors.

Every responsible contractor should be connected with some contractor association local, state or national. The small cost attached to belonging is nothing compared to the benefits accomplished. The weight of a larger membership in the varied activities they are carrying on requires the co-operation of all good contractors and especially those non-associated ones who have everything to gain and nothing to lose by affiliating. (Bulletin, Bldg., Constn., Emplyrs., Assn., Chicago, Ill.)

WINTER IS NOT DEAD; RATHER, IT IS VITAL

Hence, in the Light of Modern Advantages, Why Should Winter Building Operations Cease?

Silent fields and frozen streams—hibernating bears—nature dormant.

No wonder ancient man huddled close about the fire in his hut; for the weather ruled his life.

But modern man lives a different life. He has built a complex civilization, with industry at its heart and business as its vital energy. And modern man, faced by an emergency, goes to work harder than ever and tells the world—"Business as usual."

He does so not merely because he's energetic, but because he cannot afford to have the complicated machinery of his world slowed down. It's bad business—bad business for labor, for capital, for government and for human beings of every class and group.

Old Order Gives Way to the New

Time was when the building industry quit cold when the first snow flew. Laborers lost their jobs, expensive equipment depreciated in idleness, overhead costs piled up, the builing capacity of millions was cut down—and every aspect of business, from the corner grocery to the opera, suffered. Needed improvements remained undone, costly land produced only bills for taxes due; in short, the construction world stood still, waiting for spring. And when spring came, there was a mighty rush for labor, materials, engineers and all the rest—a spectacle impressively unintelligent!

Nowadays, winter is recognized as an asset, not a liability. Modern equipment scorns the "difficulties" of winter con-construction; modern workers are efficient in winter and their jobs reflect that efficiency.

The precautions that must be taken are simple and financially negligible, for they are more than overbalanced by the profits involved.

Capital gains, labor gains, communities profit and the whole organization of the modern world is toned up.

The same common sense of business has ironed out the folly of the winter slump.

All Builders Should Boost

Untoward circumstances have mitigated against building of late and the business has dropped off, but there are many, many projects just lying dormant that could be pushed out into the open with a little boosting. Every architect, every general contractor, sub and mechanical contractors, in fact all those allied with the building industry can build up the business fabric of the country by rationally and plausibly advocating winter building. Active operations can be carried on through the winter, they have been before and can be again. Such activities will not only benefit the prospective builder and the communities where they are pursued but they will hold building organizations together and keep the industry at a continued high point of efficiency when the big building push of another season breaks forth in the spring.

AND A BILLION DOLLARS IS A LOT OF MONEY, TOO

Country's Building Volume May Run That Far Behind Last Year's

R. C. Forbes, writing for the Chicago Herald and Examiner recently stated that building operation may fall off a billion dollars this year and gave as his reasons for the thought that the slump may continue until money rates drop well below the charges that prevail in the nation's chief financial center.

He said a very great percentage of building is done on borrowed capital. New structures are bought or rented as fast as they are completed but high costs of money discourage owners and builders from taking any chances. He further states that authoritative estimates have been made all pointing to the fact that the year 1929 will show a full billion dollars below the record for 1928 in construction work.

Mr. Forbes quoted one New York operator saying the following of the New York situation where a perceptible decrease in permits is noticeable:

"You fellows in Wall street have played havoc with building and real estate. You are willing to pay such fancy prices for money, and are hogging so much of it, that there is mighty little left for us."

Official Paper

Indiana Society of Architects

Office of the Secretary

1134 Hume-Mansur Building Indianapolis, Ind.

PUBLICITY NOW ESSENTIAL TO THE INDIANA ARCHITECTURAL PROFESSION

State Society of Architects Plans Important Move In That Line of Endeavor

There's that regional I. S. A. meeting at Evansville, Ind., next Friday, Dec. 6.

You had forgotten it? That was careless of you, and now we are glad to have reminded you on that score.

It is hoped all Indiana architects who can so arrange it will be in attendance there, and particularly does this apply to those of the profession of the southern and southwestern portions of the state.

While there will be various important topics taken up for discussion that will be of interest to all, especial attention is to be directed to that much seemingly neglected subject, publicity. There has been plenty of discussion on the matter but no concerted definite action along the line. The views on this subject have been wide and varied with just as wide and varied ideas as to the manner of approach to it and what policy to pursue.

The sundry suggestions proposed all had their followings, yet all seemed to fail of the one purpose in mind, getting directly to those who should be gotten to with enough appeal to hold and convince that the architect is a necessary adjunct to good building, and not a luxury as such a large majority of the public seems inclined to believe.

There is a reason for this latter situation, for while the architectural profession has been more or less observing certain ethical standards, handed down for centuries, other building interests, with no professional reputation to uphold and protect, have intervened between the public and the architect, undermined the profession, convinced that plans are plans, and openly boasted to prospective builders that plans can be furnished free, that there is no sense in paying an architect a fee.

Nor should the public be blamed for its course of action in taking advantage of the offering held out. The trouble lies in the fact that the public was in ignorance and no especial effort has been made collectively by the architectural profession to enlighten that public. What does the latter know about architecture? There is very little concerning it taught anywhere in the public or high schools, hence, a general lack of appreciation of it. When men reach the stage where they desire to build they know nothing of the work involved in designing, proper planning or what architectural service actually is. Nor do they know that correct plans are backed up by definite specifications, the correct selection of the proper materials for a given and definite use. All this combined with proper architectural supervision makes for economy in the long run, and the saving effected will offset the fee paid the architect and assure a good building of structural quality.

The thing that must be done is to drive this all home to prospective builders not only of today but those of the morrow.

Assuredly the profession will lose none of its dignity or caste by standing up for and safeguarding its province in the building field. If there is one thing that has a distinct right in that sphere it is the architectural profession. Building is business, today, it is Big Business. The architectural profession, and we say it with all due regard for the profession, as a profession, is a part of that business, is entitled to just recognition, its position in the scheme and the emolument that should be its reward for the service of which it is capable and which it renders.

Architecture, the architect, both have hidden their "light under a bushel" long enough. The time for action has come and to further such action the Indiana Society of Architects has a definite publicity program about worked out. The details of this are to be gone into at Evansville next week. The scheme has been put into effect in Illinois, is under consideration in Michigan and is now in prospect for Indiana.

It is designed to aid not one architect or a certain group of architects, rather the whole of the architectural profession. It is one of the most logical and constructive moves ever advocated by the society and is deserving of the support of every architect in Indiana. In fact, if for no other reason, every state architect should get back of the Indiana Society of Architects on this deal.

HERE ARE POINTS ENGINEERS SEEK TO GET ACROSS TO OWNERS

And They Are Good

SELECT men to do your work not only for their real knowledge and experience but also for their fair dealing with their fellows. The man who is admired by his competitors is generally a pretty decent fellow and worth of confidence.

* * *

LOCAL PROFESSIONAL organizations differ from national organizations in that the local organizations set up certain regulations which are suitable for local conditions. Unfortunately some few men do refrain from affiliating with such organibations and still observe correct relations with their fellow professionals and their clients. The non-membership of such men is a distinct disadvantage to the profession. On the other hand, others refuse to affiliate with the local professional organizations so that they may be free to indulge in unethical conduct without censure. These persons are a real menace to the maintenance of a high standard of professional knowledge, service and responsibility.

* * *

WE WOULD hesitate to employ attorneys and physicians who are not affiliated with their local professional organizations. Why should the building owner or investment banker be less particular about the affiliations of his consulting engineer? (Wouldn't same apply to the architect.)

* * *

CORREST RELATIONS are the bases of social and economic welfare.

STEEL INSURES STRENGTH AND SECURITY

This 160'x360' addition to the machine shop of the Chrysler Corporation, Newcastle, Ind., is framed in structural steel, fabricated and erected by the Pan-American Bridge Co., of Newcastle.

Steel is Absolutely Safe

Every process in the making of steel, from its refinement in the open hearth furnace to its final passing through the rolls, is supervised and safeguarded with one purpose—to maintain uniform quality. Steel is worked and reworked, rolled and rolled again, until the metal has a uniform, fine-grained, tough texture.

Steel can have no hidden weaknesses. It is proved right in the making. The chemical properties of steel are more accurately fixed than are the properties of a medical prescription compounded by the most expert pharmacist.

Structural steel is safe because all its properties have been tested, and are known, before it goes into construction. Architects and engineers working with steel have the assurance of recognized and tested strength—uniform, consistent in every unit.

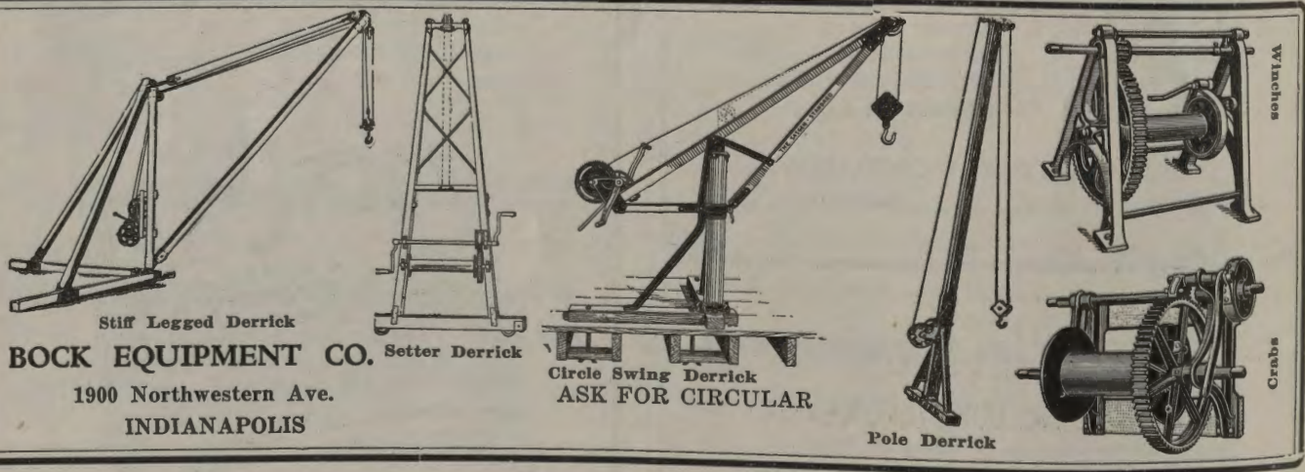
WANTED—Position by retired architect, part or whole time work. Can do perspective and color rendering in a way to attract clients. Familiar with all routine work of an architect's office. Address, R. L. Young, 1223 East Jefferson street, Kokomo.

Sealed Proposals

SCHOOL HOUSE



NOTICE TO CONTRACTORS

The undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, hereby gives notice that he will receive sealed bids for the construction of a new school house building at the Town of Wolcottville, in said counties, said building to be erected in said Town of Wolcottville, in the county of LaGrange, Indiana. Said bids will be received at the school building in said Town of Wolcottville, Indiana, up to and until the hour of 2:00 p. m. on Saturday, December 21, 1929, at which time and place, all bids received will be opened and read in the presence of the Advisory Board of said Johnson School Township of LaGrange and Noble counties.

Plans and specifications of said work are on file in the office of said trustee and copy of the same may be seen and examined and consulted at the office of Bradley & Babcock, architects, at Fort Wayne, Indiana, where blank forms of proposals and bids may also be had.

Each and every bidder shall, with his sealed bid, and in the same envelope, deposit a certified check for at least three (3) per cent of his bid payable to the order of the undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, to be retained by him as evidence of good faith and until a successful bidder has, or successful bidders have furnished bond or bonds to the approval of said trustee and said Advisory Board. And each of said bidders is also required to file with his bid or proposal all of the statements and forms required by and in all ways comply with Chapter 202 of the Acts of the General Assembly of the state of Indiana, of 1929.

Said contract or contracts will be awarded to the lowest and best bidder or

bidders, as determined by said trustee and said Advisory Board.

Said bidders will be permitted to bid on the said building, including foundation walls, complete, without heating, plumbing or lighting, and on the heating, lighting, and plumbing jobs separately, and also on any combination thereof and on said work of construction as a whole.

The right to reject any and all bids is hereby expressly reserved. Only bids for the work as set out in the plans and specifications therefore will be considered.

The estimated cost of said work, complete is the sum of $49,500.00.

CHARLES ROWE,
Trustee of Johnson School Township of LaGrange and Noble Counties, Indiana.

Nov. 30, Dec. 7-14

COURT HOUSE BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the undersigned, Board of Commissioners of the County of Lawrence in the State of Indiana, has adopted plans and specifications for the erection and equipment of a Court House on the Public Square in Bedford, in said county. That said plans and specifications are now on file in the office of the Auditor of said county, and that up to 10:00 o'clock a. m. on December 21, 1929, sealed bids are invited and will be received by said Board in the Commissioners' Room in Bedford in said county and state for the construction and equipment of said building, and that on said day the contract therefor will be let to the lowest and best bidder or bidders; said Board of Commissioners reserving, however, the right to reject any and all bids.

Bids may be submitted in accordance with the following classifications:

A. General Construction.
B. Plumbing.
C. Heating.
D. Combined B and C.
E. Electric Wiring.
F. Electric Fixtures.
G. Combined E and F.
H. Metal Equipment Furniture.
I. Stationary Wood Furniture.
J. Movable Wod Furniture.
K. Combined I and J.
L. Combined H, I and J.

Each bids to be filed with the Auditor and must be accompanied by a good and sufficient bond, payable to the State of Indiana, to the approval of the Board of Commissioners, in an amount equal to each bid; conditioned that the bidder will, if awarded the contract, promptly enter into a contract with said Board in accordance with said bid, and in accordance with the plans and specifications on file, and prepared by Walter Scholer, Architect, Lafayette. Indiana, and will build and construct said work in accordance with said plans and specifications.

Each bidder shall submit under oath with and as a part of his bid a statement of his experience, his proposed plan for performing such work and the equipment he has available for the performance of such work, a financial statement, and a non-collusion affidavit.

The estimated cost of said building and the equipment therefor is Three Hundred Ninety Thousand Dollars ($390,000.00).

Said plans and specifications may be seen and inspected at the Auditor's office in the Court House, in the City of Bedford, in said county. Contractors desiring plans and specifications may secure the same from the Architect, Walter Scholer at Lafayette, Indiana.

Witness our hands, this 5th day of November, 1929.

Mart Smith,
Kern Armstrong,
Curt Sowder,
Board of Commissioners of Lawrence County, Indiana.

Attest:
John H. Taylor, Auditor.

A SYMBOL OF QUALITY—GRADE MARKED LUMBER

Grade Marking Not a New Development in Most Industries—Almost All Products Have Their Quality Trade Mark

"The finest argument for grade marked standard lumber is that there is no sound argument against it."

This foregoing quotation was taken from an address given by Wilson Compton, member of the national committee on wood utilization, and delivered at the International convention of the National Association of Lumber Purchasing Agents on June 3 at Buffalo, New York. This organization by resolution gave its unqualified approval to grade marked lumber in principle and in practice. This endorsement came as the result of a recommendation of the lumber committee after the subject had been given careful study by purchasing agents, by lumber associations, and by the national committee on wood utilization of the Department of Commerce and others. Among the large lumber organizations represented were the Southern Pine Association and the National Lumber Manufacturers' Association.

The national committee on wood utilization was organized in 1925 by direction of President Coolidge and is composed of manufacturers, distributors, and consumers of wood products. Its chairman is R. P. Lamont, Secretary of Commerce, and its vice chairman is Major R. Y. Stuart, forester of the United States Department of Agriculture. Headquarters are at the Department of Commerce at Washington, D. C. The committee is an impartial body made up of all branches of industry and trades interested in closer wood utilization, better manufacturing, distributing and wood using practices. It works in close co-operation with official and private agencies.

Declaring that "the plan of grade marking lumber will ultimately benefit all buyers of lumber, particularly the smaller buyer," the resolution recommends to the members of the National Association of Purchasing Agents that "preference be given to grade marked stock, other things such as price, quality and service being equal."

A few more quotations from Mr. Compson's talk and from the address given by Mr. George A. Thompson might be of interest. Mr. Thompson is chairman of the lumber group of the National Association of Purchasing Agents.

Quoting from Mr. Compson—"Grade marking of lumber is not an advertising device. It is a commercial practice to safeguard the integrity of standard products.

"Grade marking is not a means of extracting higher prices. It is a means of keeping lumber in use.

"Guaranteed grade marked standard lumber is not a device to outlaw unmarked lumber. But it should be an effective means of preventing sub-standard lumber being sold as standard.

"Grade marking is not a means of exploiting proprietary products. It is an association undertaking to secure adherence to recognized standard grading rules.

"The manufacture and purchase of grade marked lumber necessitates no change in the agencies of lumber distribution. Manufacturers who have heretofore marketed unmarked lumber through wholesale distributors will continue so to distribute hereafter their grade marked and trade-marked lumber.

"Grade marking is not intended to have, and will not have, the effect of changing the channels or agencies of lumber distribution; nor of reducing sources of supply; nor of limiting competition between them.

"The practice of shipping guaranteed grade marked, trade marked American standard lumber encourages careful manufacture, precise trimming and uniform grading. It provides a definite standard for the guarantee of quality and manufacture. It furnishes a dependable basis for purchase specifications. It makes the manufacturers' standard grades readily available to consumers. It is a potent factor in establishing confidence between buyer and seller; and between producer, distributor and consumer.

"Guaranteed grade marked American standard lumber is the lumber industry's undeniable demonstration that good lumber in every important species can still be readily obtained. It is the industry's most powerful defensive against the unwarranted encroachment of inferior but standardized and skillfully exploited substitutes. The general specification and use of guaranteed grade marked American Standard lumber will be a tremendous contribution to better built homes, higher class construction and more economical and dependable fabricated wood products.

"The specification and use of grade marked lumber in foreign countries is almost universal. It is the product of decades of experience. The grade mark is a vital factor in the manufacture, distribution and use of lumber abroad. Mr. Hoover when Secretary of Commerce in speaking of lumber grade marking said:

" 'It will tend not only toward a more economical distribution but it is a big step toward better merchandising and should directly benefit the manufacturer, middleman and the consumer.'

"Grade marking is not a new development. It has been used for centuries in various industries. Most favorite products are branded with quality marks. Many building materials are grade marked. Most of them are homogeneous materials whose grading and grade marking are comparatively simple. But lumber is not homogeneous. Lumber grading is everywhere recognized as not an 'exact science.' It is more difficult. Hence the accurate grading is even more dependent upon the expert grader. The grade marking of standard lumber is an application to lumber of a principle demonstrated by the successful experience of scores of other industries and other countries. But more important, grade marking of lumber makes available, without additional expense, to the lumber consumer, the benefits of the specialized talent of the expert grader.

"Under the plan adopted by the organized lumber industry for supplying grade marked lumber, the buyer and each participating manufacturer and distributor have substantial protection against departure from standard grade practice and against grade tampering. The recognized grade marks indicate the standard grades. They are accompanied by an association trade-mark. The trade-mark is the symbol of the standing and good will of the association. Its members will not permit encroachment by an individual manufacturer seeking, through the use of the association trade-mark, to exploit the good standing of his industry as a cover for 'off-grade' or sub-standard lumber.

"The 'Tree Mark,' the registered and nationally advertised brand of the National Lumber Manufacturers' Association, is essentially a symbol of the prestige and good will of a group of several hundred manufacturers and distributors who make and distribute 'American Standard Lumber from America's Best Mills.' The association is their agent. But it is more than that. It is, in effect, a custodian of the public standing and good will of the industry at large."

STATE GENERALLY SHOWS FURTHER TENDENCY TOWARD EASING UP ON BUILDING ACTIVITY

Leading Indiana Cities More or Less Idled Along in the Matter of Building Operations in November

The early chilling wintry blasts that swept into and over Indiana, in November, added to varying other retarding influences, apparently had a decided effect of increasing the impost under which building construction operations in the state were laboring. Practically, all along the line there was a perceptible let up in the launching of new work. There were a couple of exceptions to the prevailing tendency, notably at Kokomo and Hammond where gains in new work were shown for November over the corresponding period a year ago. Other cities reporting in for the month all showed varying declines ranging from 7 per cent to 148 per cent on the volume of new building work as compared with the figures of November, 1928.

Returns from the building inspection officials of twelve of Indiana's leading cities total a $2,109,042 volume of new work for which permits were isscued, this as against $3,755,727 for November, 1928 and $3,520,630 recorded in November, 1927. This was a 43.8 per cent decline from the corresponding period in 1928 and a 40 per cent drop from the volume posted two years ago. Again, too, last month's building volume was 39 per cent in arrears of that posted in October.

Taking the cities individually one finds them performing in this manner for November, 1929, as compared with the same period one and two years ago: East Chicago, 64.7 per cent loss from 1928 but a 29 per gain over 1927; Elkhart, 148 per cent decline from 1928 and 77 per cent decline from 1927; Evansville, 23.6 per cent in arrears of 1928, 6.5 per cent advance over 1927; Gary, 7 per cent and 29 per cent declines respectively from the two preceding years; Hammond, 15.6 per cent gain over 1928 but a 31 per cent drop from 1927; Indianapolis, 67.7 per cent decline from volume a year ago and 56.7 per cent behind figures two years ago; Kokomo, 96.4 per cent gain this November over November 1928, and a 43 per cent advance over November 1927; Mishawaka, 55.7 per cent and 79 per cent declines respectively; Muncie, 64.6 per cent drop from a year ago, 76.3 per cent drop from two years ago; Richmond, 39.3 per cent and 30 per cent respectively in arrears of 1928 and 1927. South Bend, 14.4 per cent in arrears of 1928 and 42.5 per cent behind November 1927; Terre Haute, 61.8 per cent decline from 1928, 62.4 per cent decline behind 1927.

These are the official figures submitted by the building inspectors:

City—	1929	1928	1927
East Chicago	$ 116,325	$ 330,100	$ 29,925
Elkhart	34,121	42,420	155,617
Evansville	303,018	396,674	284,364
Ft. Wayne	160,100	174,050	225,415
Gary	299,300	259,300	434,150
Hammond	575,859	1,789,766	1,332,196
Indianapolis	147,520	13,855	27,530
Kokomo	23,035	52,032	111,840
Mishawaka	52,373	177,619	221,540
Muncie	46,690	77,028	66,875
Richmond	327,825	382,990	570,285
South Bend	22,876	59,893	60,903
Terre Haute	$2,109,042	$3,755,727	$3,520,630

"HIGH, HIGH, HIGH, UP IN THE AIR"

Recent Popular Song Applicable to American Business Buildings

A survey conducted by the Thompson-Starrett Co., Inc., of tall buildings in the United States, reveals that in thirty-six of the largest cities of the nation, there are 377 skyscrapers over twenty stories in height.

There are 4,778 skyscrapers which are ten or more stories in height. Forty-two of the 173 cities of 50,000 or more population have no buildings of that height and fifty-nine cities reported less than five.

Slightly more than half of the skyscrapers ten or more stories high are in New York. Six cities reported more than one hundred buildings ten or more stories high. They are New York with 2,479 buildings; Chicago with 449; Los Angeles with 135; Detroit with 121; Philadelphia with 120; and Boston with 104. Philahelphia has twenty-two buildings twenty-one or more stories high, Chicago has sixty-five and New York has 188.

There are ten buildings in the United States more than 500 feet tall and five others are being built. The highest is the Woolworth building, which rises 792 feet above the ground, constructed sixteen years ago. Two New York skyscrapers now under construction will exceed this height. One is the Chrysler building, which will be 808 feet high and the other is the Bank of Manhattan building which will rise 836 feet above the sidewalk.

New York still holds the center of the stage for erecting taller and wider building. Two notable examples of this are the Chrysler Tower, Manhattan Tower and Empire State building all of which are shooting heavenward in proportions not dreamed of years back. Then, too, recently there came word from that city of a super-skyscraper, 150 stories high, a quarter of a mile in the air, two blocks square and towering some 1,600 feet above the level of Broadway. Its estimated cost is to exceed $75,000,000.

DOUBTFUL GESTURES OF SOME YEARS BACK LEAD ON TO NOTEWORTHY DEVELOPMENT IN INDIANA BUILDING CONSTRUCTION FIELD

State Building Congress Traces Back to Exchange of Courtesies Between Architects and Contractors Associations

It has taken years of effort, a decade or so, to build the building construction industry of Indiana up to the point where it is the most highly organized of any in the building field in the country. No other state has this field of endeavor so well co-ordinated as has Indiana. And yet how many Hoosier builders actually appreciate this situation? How many realize the opportunity and power thus afforded to the building interests through this channel?

Reference is made to the Indiana Building Congress, the only state-wide organization of its kind in the country. There are such city organizations but even they are few and far between. It remained for Indiana to institute a state body of such a nature and well has she done the task. Builders of other states, men prominent in the industry and of national reputation, have been loud in their praise of the Indiana Building Congress idea and are awake to the possibilities it affords. Nor would it be surprising to see in a short time others following the trail that has been blazed by Indiana builders.

The most encouraging feature of the whole scheme is that practically every interest of moment in the building field in this state has gotten behind the move and made it possible to weld the industry into one big whole for the advancement of all. That is the big thing. But it must be remembered that to weld the various parts must be brought together, and it is the forum that the Congress offers that opens the channel by means of which the various men and interests are afforded a common plane upon which to meet, discuss current situations, interchange ideas, prepare for emergencies, come to know each other better and unconsciously effect better understandings.

Old Order of Distrust and Suspicion Removed

It is this latter condition that has been brought about to the point where the men of the various building interests gather together, entertaining correct appraisals of each other individually, appreciating the rights of the other fellow and all seeking ways and means to remove obstacles that have for years intruded to impede the facilitation of building operations. They gather under the banner of the Congress not, as of yore, filled with distrust and suspicion, but with open minds, eager to offer and hear constructive ideas advanced, threshed out and put into operation for the good of the industry.

The Indiana Building Congress is the superlative in organization work. It is the outgrowth of the co-operative idea and is the fruit of efforts launched over ten years ago. Up to that time there were organizations, each more or less selfish, and all in the field to "get theirs." There was little or no contact between such bodies other than when they crossed each others paths and were in dispute. Each was inclined to view the other with suspicion and to hold aloof as far as possible. It will take no mental effort on the part of a majority of Indiana builders today to recall those conditions of yesterday. One might call it the euchre days when each body of men of their particular calling or profession was intent on "playing a lone hand," it was all or none then. Architects as professional men were inclined to the idea that they had nothing in common with the builders and other interests except to supervise the work and see that their plans and specifications were carried out as intended. The general contractors were

"the big bosses" and were looking out for their own interest. The sub-contractors took what tricks they could and had to battle for everything they got. The material supply fellow was out for business and business alone, he was out of sorts when work stalled along but never once thought the other fellows problem was his. The engineer was far out on the circle, for he had nothing in common with the others except for professional dealings. As for labor, when it came into the picture, every one looked for a fight and just hoped as to the outcome.

The Awakening

That was the situation when the architects of Indiana awoke back in 1919. This is not an attempt to pat the architect on the back and hand him undue credit. It is merely a statement of facts. Theirs was a wild eyed dream, so it was thought, when the proposal was advanced that an effort be made to effect co-operation between the Indiana Society of Architects and the then infant Associated Building Contractors of Indiana. The matter was approached with delicate care, it was a venture on thin ice. Some men scoffed at the idea, others liked it but didn't think it possible of achievement, a few were deeply impressed with its possibilities and espoused the cause.

As a result of that proposal an invitation was extended to the president of the Associated Building Contractors of Indiana to deliver an address at the annual meeting of the Indiana Society of Architects. It was intimated to him that he should spare no words in stating the contractor's position and advance ideas as to how the contractors and the architects might be able to get together for a mutual discussion of building business problems. That invitation went out with some fear and foreboding. It's receipt was attended with much the same sensations. Further, it was discussed at considerable length before an acceptance was sent to the architects. It was something new for Indiana and aroused much interest.

The address was made and created a favorable impression. The novelty of the thing was interesting, the points made appealed, and, the ice was broken. A similar invitation was extended to the president of the Indiana Society of Architects to appear before the annual convention of the Associated Building oCntractors of Indiana, and was accepted.

Marked Beginning of a New Era

That exchange of courtesies marks an epoch in Indiana building affairs. Constructive ideas of moment were advanced. They were of a nature that made men almost gasp, so daring did they seem at the time. They were revolutionary, they were visionary, they were so theoretical they seemed impractical. That was then. Today those ideas are in effect, have been proven workable and each and every one of them has resulted in much toward the advancement of the building industry in Indiana.

That exchange of courtesies brought the architects and contractors together in a mutual relationship such as had not been known before in this state. That relationship grew with the years and its influence expanded under steady co-operation until it reached out and drew in the engineering profession and labor. That "Big Four" through the greater degree of greater understanding has accomplished much good for the building industry of Indiana.

Erected on a Firm Foundation

There you have the foundation upon which the Indiana Building Congress was built. It began in a small way and because there was a long-felt want for such effort it took hold and grew. The time came when more concentrated co-operative effort was needed, nor was it very difficult to crystalize that effort. The architects, contractors, engineers and labor who had been working together for several years seized upon the Building Congress idea on a state-wide scale and set about to put it into effect. The plan of organization was to solicit association membership, each association to name its representatives to the Congress. Thus any action taken by that body would be representative of each professional, business or labor group which would have far more effect than if effected by individuals alone. The proposition appealed, and joining with the above groups were the state associations of building supply men, electrigists, sanitary engineers, plumbers and steam fitters, master painters and decorators and the structural steel fabricators.

The State Building Congress is a distinct body, and through its association affiliations is representative of thousands of building men in this state. It is one of the most thoroughly organized bodies of builders in the country, is an asset to the state and is an organization deserving of the support of every builder in Indiana.

TAIL-END OF SEASON RUNS TRUE TO FORM

Building Operations Slow Up at Indianapolis

Indianapolis building hit the skids during November to land on a volume level considerably below that recorded for any single month for some time past. It was a decided drop from previous monthly performances of preceding months. However, this falling off of activity in new work is in line with that shown in other localities about the country and was to be expected as the fag end of the rather inactive building year sets in.

The figures for the month just past, as prepared by Mrs. Clara Oxley, statistician for the city building inspection department, show that new dwelling construction work led all other types of structural effort by a wide margin, amounting to close to half a million dollars, accounting for almost half of the entire total of new building projects passed upon for the issuance of permits. Apartment house construction was practically nil and no business structures of consequence put in an appearance. Repair and alteration work was fairly active and helped in its way to swell the volume of new work for the month.

The figures for November ran far in arrears of those for the previous month and for November, 1928.

These are the official figures given out by the Indianapolis building department:

Type of work—	Per.	Est. Val.
Accessory buildings	99	$ 38,014
Business buildings	15	47,750
Dwellings	53	241,500
Industrial buildings	1	30,000
Public buildings	2	24,500
Miscellaneous work	89	74,715
Repairs and alterations	199	119,380
Total	458	$575,859

ATTENTION TURNED TO ANNUAL CONVENTION

Evansville Contractors Begin Early to Plan for Gathering of Indiana Builders

Mid-winter is always a busy time for the Associated Building Contractors of Indiana, and it is just possible that the early arrival of the snow covered landscape season started some of them thinking convention time was near at hand.

Be that as it may, Secretary J. H. Owens of the State A. B. C.'s went to Evansville this week-end to confer with the local convention committee on preliminary plans for the holding of the Twelfth Annual Convention of the Indiana A. B. C.'s in that city the latter part of January.

These A. B. C.'s, annual affairs are an established institution and in past years have attracted big crowds of representative builders from all over the state. It has been sometime since Evansville has entertained the Indiana contractors in a body and every effort is to be exerted to make the 1930 gathering the best ever.

Official Paper

Indiana Society of Architects

Office of the Secretary

907 Architects and Builders Building, Indianapolis, Ind.

INTEREST OF I. S. A. MEMBERS CENTERS AT EVANSVILLE TODAY

Regional Meeting on There

Down in "The Pocket of Indiana," at Evansville today, Saturday, Dec. 7th, the local Architects Society of that city is entertaining the Board of Directors and visiting members of the Indiana Society of Architects in attendance at the latter's regular quarterly regional meeting.

These regional meetings, held during the year, follow a plan adopted by the State Society by means of which to give to its members greater contact with each other and the organization. During the past year meetings were held at Michigan City, Ft. Wayne, Indianapolis and the gathering at Evansville today marks the last one on the 1929 calendar.

The main feature of today's affair hinged on the subject of Publicity. It is one that for years has been widely discussed by the architects without any definite conclusion being reached. All admit the architectural profession should be brought more before the public that the latter may more understandingly know what it is all about, what it has to offer and the service of which it is capable. All sorts of manners of approach have been suggested but none of them have converted the architects conclusively to any one idea.

Appreciating the situation the Board of Directors has devoted much time to the matter and after considerable investigation of the plan adopted by the Illinois Society of Architects was ready to give it serious thought for action at Evansville. It is a simple yet compelling scheme and can be put into good effect with any sort of co-operation on the part of the architects. It is collective in its nature, dignified and direct. The decision of the board will be intensely interesting.

The program for the day is to be as follows:

A business session at the Hotel McCurdy in the morning will start things off. Following noon luncheon visitors will be taken in automobiles by local architects for a tour of the city and visits to industrial plants. Another business session will be held later in the afternoon.

A banquet to which contractors and other interests allied with building construction, as well as the general public, are invited to attend, will be served at the hotel at 6:30, Arthur G. Bacon, president of the Evansville Societ yof Architects, presiding.

The speaker of the evening will be Dr. Allen D. Albert, vice-president of the architectural body, delegated to design buildings for the Chicago world's fair in 1933. Dr. Albert, an eminent architect, world traveler and publicist, will deliver a public lecture on modern architecture.

Alfred E. Neucks is chairman of general arrangements committee: H. Gilbert Karges, chairman entertainment committee, and Fritz Anderson, chairman publicity committee.

Arthur G. Bacon, president; Edwin G. Berendes, vice-president; Ralph W. Legeman, secretary-treasurer, and Frank E. Fowler, H. Gilbert Karges, Harry E. Boyle, Fritz Anderson, Frank J. Schlotter, Alfred E. Neucks, Charles L. Troutman and Edward J. Thole make up the membership of the Evansville Society of Architects.

CHANGES NOTICEABLE IN ARCHITECTURE IN EUROPE

City Planning Having a Decided Effect in Dispelling Ugliness

European architecture is undergoing a remarkable change. The old world is taking on an entirely new dress in its latest buildings. City planning and modern types of construction eventually will do away with the sprawling, ugly and disorganized suburbs that were formerly a part of practically every continental city.

Holland took the lead in municipal supervision of architecture and building. Modern Amsterdam is an excellent example. Motoring from the center of the city, a visitor passes out of the old core through a belt of pre-war ugliness into the wide avenues of a modern suburb. The new sections are all laid out according to a city plan that provides for gardens, schools, shops, churches and places of entertainment. The residences are free from the old conventional enrichment, encrustation and ornament. The roads are wide and well paved.

Germany Changing

Germany is now giving more of the time to architecture that was devoted strictly to industry during her remarkable economic recovery. Berlin, Frankfort, Hamburg, Breslau, Stuttgart and Cologne contain many new and novel designs in building. Some of the shops of Berlin, particularly in the Kurfurstendam, of Charlettenburg, have gone ultra-modern and there are several restaurants that look like ships. The architecture of the new Berlin aerodrome harmonizes with the fine lines of the airplanes continually leaving or arriving at the field. A magnificent factory at Seimenstadt is typical of the new German ideas of construction.

The new Ufa Cinema Universum in Berlin offers an entirely new suavity of line and ingenuity of effect. Limited to simple surfaces, its sexternal lines are picked out in electric light by long mercury-vapor tubes. The increased use of this colored night lighting has a gay and stimulating effect upon Berlin's streets.

Housing Problem Solved

Frankfurt is another conspiciously modern city. Experts believe that the housing problem has been solved there better than in any other city of the world. A remarkable program, designed economically and artistically, has been carried out with a minimum expenditure. Two new Frankfurt buildings attract particular attention. One is an immense market hall, a veritable cathedral of commerce; the other is a church devoid of Gothic enrichment or carved detail, but expressing spiritual ideals in a simple and effective massing.

Despite Parisian shop fronts that are often more bizarre than modern, France has no national movement toward modernity. Such works as the new Theatre Pigalle, considered the finest small theatre in existence, are the expressions of individuals. There is little trend toward modernity in England outside London, although new buildings in the metropolis are definitely breaking away from the old ideas.

STEEL INSURES STRENGTH AND SECURITY

A complete steel structure was built over and around a huge portion of the G. Ittenbach Stone Co., plant in Indianapolis without interfering with plant operation. Only with Steel could this be done. Steel fabricated and erected by Hetherington & Berner, Indianapolis.

There Is No Su

Steel is metal, with the best virtues of metal. Non-metallic materials do not have its high compressive, tensile and shearing strength, its resilience, its permanence — its thorough fitness for construction duty.

building and separate and sealed proposals for a Superintendent's residence and also combination sealed proposals for the general construction of the Nursery building, Laundry building, and Superintendent's Residence, for and at said Soldiers' and Sailors' Orphans' Home, together with sealed proposals, separate and combination as above for the mechanical installations in and for said buildings and according to drawings and specifications for said work as prepared by McGuire & Shook, architects, and J. M. Rotz Engineering Company, of Indianapolis, Indiana, in whose offices said drawings and specifications are now on file, in addition to filed copies in the office of the superintendent, and the State Board of Accounts.

All proposals must be submitted in a sealed envelope bearing the title of the work, and the name of the bidder, must be submitted on Form 96, as prescribed by the State Board of Accounts and be accompanied by a certified check in a sum equal to two (2) per cent of the whole amount of the bid for each building and in addition shall be accompanied by completely executed Contractors' Questionaire Form 96A.

The Board of Trustees reserve the right to reject any or all bids submitted. Certified checks shall be made payable to Arthur Wolf, treasurer, and will be held by him as evidence of good faith that the bidder will enter into a contract under the terms of his or their bid and the provisions of the drawings and specifications, should they be awarded said contracts, and that they will execute proper bonds for said work which will be equal to the full amount of the contract sums. Checks of unsuccessful bidders will be returned at the earliest possible date.

In the event that the successful bidders (the ones to whom contracts are awarded) fail to enter into contracts with the board and submit proper bonds without delay then the latter will retain possession of and realize on said checks as and for liquidated damages. Copies of the drawings and specifications may be obtained from the architects and engineers upon making a deposit of $10.00 (ten dollars) for each set, and said deposits to be returned to bidder upon the return of the drawings and specifications in good condition on or before the time set for receiving proposals.

BOARD OF TRUSTEES,
HESTER M. HART,
Vice-President.
ARTHUR WOLF,
Treasurer.
JOSEPH A. MINTURN,
Secretary.
R. H. TYNER.
L. A. CORTNER, Superintendent.

SCHOOL HOUSE

NOTICE TO CONTRACTORS

The undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, hereby gives notice that he will receive sealed bids for the construction of a new school house building at the Town of Wolcottville, in said counties, said building to be erected in said Town of Wolcottville, in the county of LaGrange, Indiana. Said bids will be received at the school building in said Town of Wolcottville, Indiana, up to and until the hour of 2:00 p. m. on Saturday, December 21, 1929, at which time and place, all bids received will be opened and read in the presence of the Advisory Board of said Johnson School Township of LaGrange and Noble counties.

Plans and specifications of said work are on file in the office of said trustee and copy of the same may be seen and examined and consulted at the office of Bradley & Babcock, architects, at Fort Wayne, Indiana, where blank forms of proposals and bids may also be had.

Each and every bidder shall, with his sealed bid, and in the same envelope, deposit a certified check for at least three (3) per cent of his bid payable to the order of the undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, to be retained by him as evidence of good faith and until a successful bidder has, or successful bidders have furnished bond or bonds to the approval of said trustee and said Advisory Board. And each of said bidders is also required to file with his bid or proposal all of the statements and forms required by and in all ways comply with Chapter 202 of the Acts of the General Assembly of the state of Indiana, of 1929.

Said contract or contracts will be awarded to the lowest and best bidder or bidders, as determined by said trustee and said Advisory Board.

Said bidders will be permitted to bid on the said building, including foundation walls, complete, without heating, plumbing or lighting, and on the heating, lighting, and plumbing jobs separately, and also on any combination thereof and on said work of construction as a whole.

The right to reject any and all bids is hereby expressly reserved. Only bids for the work as set out in the plans and specifications therefore will be considered.

The estimated cost of said work, complete is the sum of $49,500.00.

CHARLES ROWE,
Trustee of Johnson School Township of LaGrange and Noble Counties, Indiana.

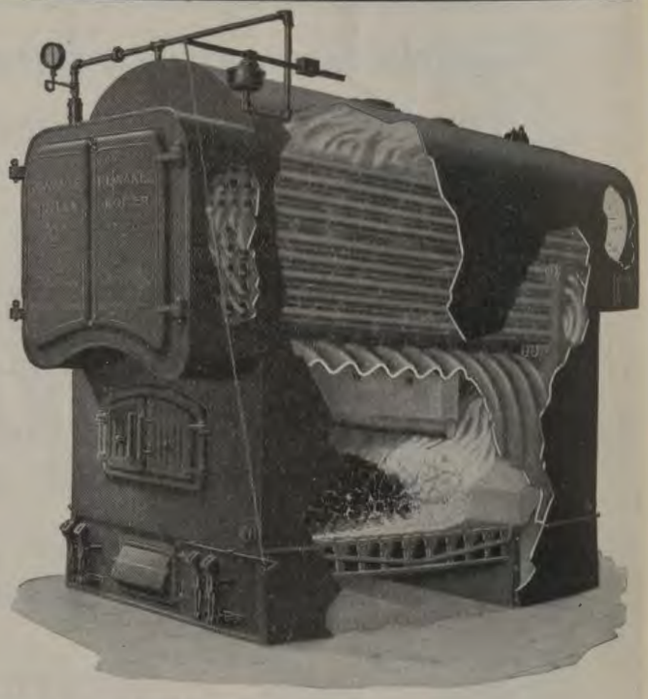
"B60" Series Hot Blast Smokeless Boiler

Patent Pending

Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

PROX HOT BLAST SMOKELESS BOILERS
Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood



Capacities—800 sq. ft. to 25,000 sq. ft. steam

NATIONAL CONSTRUCTION CONFERENCE ENDORSES MOVE SEEKING THE UNTANGLING OF THE JURISDICTIONAL DISPUTE SITUATION

Leading Builders of the Country in Sesison at Pittsburgh Also Discuss Other Important Matters

Evidencing an alertness, which shows builders of the country are on the job, and an earnest intent to improve building conditions as much as it is within their power, a hundred or more big contractors from New York, Chicago, Boston, Cleveland, St. Louis, Pittsburgh, Cincinnati and other localities of the East and Middle West, delegates from builders associations, met recently in Pittsburgh for the annual construction conference held under the auspices of the National Association of Building Trades Employers.

Concerning that meeting which attracted national attention the official bulletin of the National Association had this to say:

"David T. Riffle, Pittsburgh, President of the Association, called the meeting to order with E. M. Craig, Chicago, Secretary. Mr. Riffle announced that there was no set program for the conference on any particular subject excepting that of considering jurisdictional trade disputes. An invitation had been extended to the Association of the Executive Council of the Building Trades Department through Mr. James J. Scully, President of the Building Trades Employers Association of Boston, who had held several conferences with the officers of the Building Trades Department on the subject.

Mr. Scully called the attention of the Association to the subject and the officers acted promptly in arranging for a conference of employers in the building industry who were employing union labor on their construction work. The Executive Council of the Building Trade Department is scheduled to hold a meeting at Tampa, Florida, on January 20th next and desire that a committee from the employers meet with them at that time and discuss the subject. The employers who were approached thought that it should be made an association matter and that some association should sponsor the object. The purpose of the conference was to place the matters before the representatives of the National Association and other cities who were not affiliated, to ascertain if the scheme met with the approval of the contractors and to appoint a committee with power to discuss a plan of organization of a Board of Awards, which would meet with the approval of the employers and the building trades organizations.

Mr. Oscar W. Rosenthal, Chiacgo, vice-president of the Association, outlined the purpose of the meeting and the necessity of having some organization between the employer and the employee to quickly adjust differences between labor groups as they arose, in order that work could proceed without interruption on buildings. Mr. Scully, President of the Building Trades Employers' Association of Boston, followed Mr. Rosenthal as also did Mr. C. G. Norman, Executive Manager of the Building Trades Employers' Association of New York City.

Before adjourning for the noon recess, President Riffle appointed the following as members of the Committee on Resolutions, who were instructed to bring in a resolution in reference to the jurisdictional question and any other subjects which they desired to call the attention of the convention and the general public to: Messrs. O. W. Rosenthal, Chicago; C. G. Norman, New York City; J. J. Scully, Boston; A. J. Schulz of Pittsburgh, and George Thesmacher of Cleveland.

Upon reconvening the conference at 2:00 p. m., Chairman Riffle announced that the Committee on Resolutions were not yet ready to make their report and suggested that the members discuss the question of the establishment of Credit Bureaus for the industry in the various cities throughout the country. He called upon Mr. Edward McDonell, Secretary of the International Association of Plastering Contractors who explained how the Detroit plan was operating and gave a detailed report regarding the make-up of the Detroit plan and the number of organizations who were participating in it.

He was followed by Mr. William McGuineas of Chicago, who stated that they had the plan already in operation in the Electrical industry in Chicago. Other Chicago representatives reported that they are holding meetings and were expecting early in December to perfect a joint organization of contractors and material dealers in that city covering every branch of the industry. Mr. Oscar Reum, Chicago, endorsing the Credit Bureau plan, also gave a detailed account of the origin of the committee representing the Allied Construction Industries, who were responsible for the formation of the credit bureaus idea. He stated these activities were directly for the benefit of those engaged in construction work. Quite a discussion in which a dozen or more of the delegates participated ensued relative to this very important subject.

The Resolutions Committee shortly announced that they were ready to make their report. Mr. Rosenthal, chairman of the committee, then read the resolutions which they had prepared; the first one in reference to the formation of a Jurisdictional Award tribunal. He read as follows:

Jurisdiction Trade Disputes

Whereas, the construction industry and the public have suffered great inconvenience and financial loss because of disputes as to which of two or more trades shall perform certain work in building construction, and

Whereas, no tribunal exists for the adjudication of such jurisdictional disputes, and

Whereas, the Building Trades Department of the American Federation of Labor recognizing the seriousness of this situation affecting, as it does, the public, the manufacturer, the builder and labor, has extended to the National Association of Building Trades Employers an invitation

to meet with their Executive Committee during the week of January 20, 1930, at Tampa, Florida, to discuss and if possible determine a solution of this very important question, and

Whereas, we consider this a great forward step on the part of the Building Trades Department of the American Federation of Labor,

Therefore, Be It Resolved, That the National Association of Building Trades Employers and their invited guests, employers of Union Labor from throughout the United States in convention assembled in the City of Pittsburgh, this 18th day of November, 1929, endorse this effort on the part of the Building Trades Department of the American Federation of Labor to find a solution to this tremendously important problem and herewith accept their invitation to meet with them for a frank and open discussion, and

Be It Further Resolved, That a committee be appointed which shall have the full authority of this Association to represent it at Tampa, Florida, on the week of January 20, 1930, and if possible to arrive at an agreement with the Building Trades Department of the American Federation of Labor that will finally dispose of this issue.

It was moved, seconded and carried that the resolution as read be adopted.

The Committee on Resolution then presented the following:

Hoover Industry Conference

Whereas, the President of the United States, realizing the necessity for some determined action and sound recommendation on the part of business and industry of the United States, that business may be stabilized, has called together for conference in the City of Washington, certain leaders of these various industries and commercial organizations, and

Whereas, the tremendous importance of the construction industry and its influence upon all industries is recognized by the President as reflected by his public statement, and

Whereas, the National Association of Building Trades Employers in convention assembled in the City of Pittsburgh to discuss a means for the adjudication of jurisdictional disputes in building construction, has had the President's public statement conveyed to it.

Therefore, Be It Resolved, That this convention compliment the President of the United States upon this very important action and endorse his position in calling together such a conference, and offers its assistance in any manner that he may see fit to call upon them.

It was moved, seconded and carried that the resolution as read be adopted.

Mr. Rosenthal then presented the following resolution referring to a revision of the Constitution and By-Laws of the Association:

To Revise Constitution

Whereas, the National Association of Building Trades Employers has for years exerted a tremendous influence for good upon the construction industry, and

Whereas, the problems of the industry are so complex and economically so vital to the public as well as to the industry that its influence must be extended to communities that do not now enjoy a part in its councils, and

Whereas, the constitution of the National Association of Building Trades Employers having been unchanged these many years does not fully cover the activities and the aspirations of so important a body.

Therefore, Be It Resolved, That we, the National Association of Building Trades Employers in convention assembled in the City of Pittsburgh do instruct our Executive Committee to appoint a Committee to redraft the constitution and by-laws and if such Committee deems it advisable to make such change as in its judgment seems proper in the name and title of this association.

It was moved, seconded and carried that the resolution as read be adopted.

Mr. Rosenthal, as chairman of the committee, stated that the committee were fully in accord with two other propositions which had been suggested to them worthy of a resolution of support, but that the committee did not have time to draft suitable resolutions covering the subject.

He moved and the motion was duly seconded that the association as a whole concur in the efforts being made by contractors throughout the country in forming of a Credit Bureau in their respective localities for the construction industry. He also moved which was duly seconded and carried that the association reaffirm its recommendation to members of the association and contractors throughout the country to give more attention and make every effort possible to reduce to the minimum accidents on construction work and to safeguard their employes and the building public.

After a short discussion of the various topics referred to in the resolutions by members present, the conference adjourned.

EVANSVILLE STARTS ACTION FOR HOLDING OF ANNUAL MEETING OF INDIANA BUILDERS IN THAT CITY

Local Interest Keen

The wheels were set in motion December 6 for the regular annual convention of the Associated Building Contractors of Indiana which is scheduled for Evansville, Ind., the latter part of January.

The local committee, consisting of Matt Hallenberger, R. J. Coudret, Ben Diehl, J. E. Elliott and E. W. Nunn, met with State A. B. C. Secretary John H. Owens of Indianapolis, to confer on preliminaries relative to shaping plans for this big annual gathering of Indiana builders.

It was agreed to hold the meeting late in January at the Vendome Hotel, and while tentative dates were selected announcement on this score is being withheld until a definite decision is reached, which should be shortly.

Those in charge of arrangements are anxious to work up a program different from that of previous years, and hope to present well known speakers with important messages for Hoosier builders. There are so many vital issues confronting contractors these days and the state association is anxious to bring them up for presentation, deliberation and discussion for the benefit of the membership.

The contractors of Evansville are enthused at the prospect of entertaining the builders of Indiana and are eager to get plans underway that all convention delegates and visitors may be assured of a profitable and pleasant visit when they gather in annual session.

BUILDERS ASSOCIATIONS AT FORT WAYNE ELECT OFFICERS

Theodore Buesching Heads the A. B. C.'s., William Schenkel the Mason Contractors

Annual meetings and elections have been of absorbing interest to Ft. Wayne contractors of late, the climax being reached last week with the gathering of members of several of the associations at A. B. C., headquarters, 825 Calhoun st., to talk over business and name officers for the ensuing year.

The Mason Contractors' association elected these men: William P. Schenkel, Arthur Hachmeier, treasurer, George Schack, secretary. Standing committees president, Ellison Meier, vice-president,

will be appointed by President Scherkel in the near future.

The election of the Ft. Wayne chapter, Associated Building Contractors of Indiana resulted as follows: President Theodore Buesching, Vice-President, George Irmscher, treasurer, A. W. Kettler. George Schack was appointed secretary. The various standing committees are to be named soon.

INDIANAPOLIS DRAFTSMEN MAKE MERRY AT ANNUAL MEETING

Embryo Architects of Capital City Put on a Great Evening

The murky dampness of the evening did not lessen the attendance nor shorten the evening of pleasure enjoyed Wednesday, December 11th, by members of the Indianapolis Architectural Club at their club election and last dinner-meeting of the year. The "rathskeller" of the Sherman Inn was gaily and appropriately decorated for the occasion and the committee on decorations justly deserved the vote of appreciation given to them. Each and every one was bedecked in a brightly colored crepe paper hat and favored with a noise-making device that functioned overtime, much to the real musicians' discomfort. Kenneth Williams, retiring president, called the gathering to order and gave the command to attack the food supply and his instructions were carried out to the man, Ed Pierre doing double duty. Two very attractive young ladies added much merriment to the affair by their vocal and piano renderings. George Applegate, secretary, in reading his report for the year stated that there had been an average atendance of 33 for each meeting throughout the past year which is certainly commendable indeed.

The treasurer, C. Alden Meranda, made even a better statement than that when he reported that not a member was behind with his dues, showing the stock market crash means nothing to our budding young architects.

Herbert Foltz, the guest speaker of the evening, was in a reminiscent mood and told of early architectural practice in Indianapolis, from the eccentric Francis Costigan, of Lanier House fame, of Edmund May, D. A. Bohlen, W. H. Brown, George Bunting, R. P. Daggett and Adolph Scherer. Mr. Foltz started as a draftsman in Indianapolis in 1891 and related many amusing stories of those days. An entertaining moving picture, "The Story of Rail Steel," was shown and explained just how reinforcing steel was manufactured and shaped for delivery to the job.

When everything of a relaxing nature had been concluded, the business part of the meeting came to order. The two tickets of candidates for election were divided under the names of "Pencil Party" and "Eraser Party." Much amusement and possibly some weight in the electioneering was caused by the introduction by one of the tickets of some colored cartoon slides thrown on the screen. It was easy to say that they were not of the complimentary type, although they were very clever productions.

In retaliation, the other side took the "holier than thou" attitude of "no mud slinging" and their spokeman, Eddie Clemens, expounded the virtues of his ticket with the customary oratory that is always prevalent around election time. The monitors passed the ballots around, much scratching was done, although "the Citizens' Committee" did not endorse any of the candidates.

The totaling of votes gave forth this message for the following year: Howard Foltz, president; Edward Clemens, vice-president; George W. Applegate, Jr., secretary; Francis Schroeder, corresponding secretary; Lot Green, treasurer. For the first time since the organization of the club, a year book was gotten out which was a very fine record of the past year's achievements.

FORT WAYNE NOW HALF A MILLION DOLLARS AHEAD OF THE BUILDING RECORD FOR ENTIRE YEAR OF 1928

Hoosier City One of the Scattered Few of the Country to Show an Increase in Building Construction Volume

There has been much chronicled during the past year setting forth the general decline of new building construction operations in various localities and such information was backed up by figures. But at last one city has been found that looms up like a lighthouse in a fog for it has sailed along, built and built and built some more, to roll up a record for this year that stands out and above, to the extent of $860,792, over the first eleven months of 1928. Too, there have been 324 more permits issued than there were over the corresponding period a year ago.

The city is none other than Ft. Wayne, Ind., which has set a really remarkable pace in view of the off building year that has prevailed throughout the country. It is not only a great performance but unquestionably reflects the prosperity and up-and-doing spirit of the northern Indiana metropolis.

However, this is not all. Ft. Wayne, to December 1, has launched more new building construction work this year than was started during the entire twelve months last year for which period a total of $5,081,185, covering 1655 permits issued, was recorded. As matters stood Dec. 1, the gain for the current year over the volume for the entire twelve months of 1928 was 232 permits issued and $505,125 in estimated valuation. That which is posted in December will be "velvet" and serve to boost the present record just that much more.

With the month of December still to be figured in, the increase for 1929 over 1928 should easily exceed $1,000,000.

The record for November constitutes probably the greatest November building record in the history of Fort Wayne, with a total of 146 building permits issued, valued at $674,388. This was an increase of $139,343 in volume, with a decrease of 67 in the number of permits issued as compared with November, 1928.

Month by month comparisons for the years 1928 and 1929 are as follows:

	1928		1929	
	Permits	Est. Val.	Permits	Est. Val.
January	64	$ 205,025	29	$ 36,430
February	71	156,792	68	168,230
March	181	351,416	196	600,912
April	184	391,229	206	888,792
May	211	729,335	216	670,400
June	152	331,349	200	519,798
July	155	405,221	168	367,730
August	162	919,869	230	665,070
September	141	502,228	215	559,535
October	149	412,056	213	435,045
November	93	320,998	146	674,368
Total	1563	$4,725,518	1880	$5,586,310

QUARTERLY I. S. A. BOARD AND REGIONAL MEETING AT EVANSVILLE DEVELOPED IMPORTANT AND INTERESTING TOPICS FOR DISCUSSION

Matters Brought Up Furnish Definite Focal Points for Annual Meeting Early in February

The Evansville meeting naturally divides itself into two parts, each of real interest and one of powerful importance to the Society.

The important half of the meeting developed in the board meeting in the morning. Please read the following briefed items and think over their importance to you in your business. Incidentally these things will eventuate in dollars for Indiana Architects, and represent just a small part of what you are receiving for your membership dues (whether you have paid them in full or not—you profit just the same—so don't pay your dues).

Here are the items.

1. Mr. A. G. Bacon of Evansville presented a comprehensive and thought provocative report on the matter of publicity—group advertising if you please—the most vital thing confronting our state organization today. The matter was of so much importance that it was moved that it be made a special order of business for the next regular meeting of the society. If you want a real thrill, plan to attend that meeting, and you better attend if you have any ideas.

2. And the date for the regular convention of the society was selected—at INDIANAPOLIS, FEBRUARY 7th and 8th.

3. The board expressed the disapproval of the society of the advertising of building material in newspapers, magazines, or other mediums that carry with the advertisement illustrations of work poorly designed.

So look through your papers and if you find any such silly infraction of good advertising judgment, cut it out and send it in to the secretary, and we'll get some action.

4. An amendment to the constitution is proposed, providing for membership by registered architects only.

5. We're going to write to the big boys at Washington, requesting that in considering the public building program, they also think of the poor suffering architects and fix it up so that the architectural work in connection with this program will be spread about the country.

That isn't all of it, but that's an indication of what the society is doing for you architects, and yet we presume that you don't half appreciate it, and that you've allowed your dues to become past due.

And the second important half of the day was the evening and the talk from Dr. Allen Albert. Dr. Albert is one of those unusual speakers who can give you a new thrill each time that you listen to him, and it doesn't seem to make any difference how often you listen to him, the new inspiration is always given to you.

He spoke of his trip to the World's Fair of Europe, and his impressions from each. Each fair has its own individual characteristic which Dr. Albert seemed to catch and carry across to his listeners in a way which gave you a picture of the entire show simply by remembering the apparent structural theme of that particular show.

There was the uninteresting bulky masonry of one; the saw teeth of another; the poured concrete of another; the combination of various architectures of Paris; and the water display and illumination in Spain. And then he summed it all up in the theme, which is inspiring, all that they propose to do at Chicago—"That country is going to make the greatest material advance in the next decade which makes the largest advance in pure research."

It was a fine day and the Evansville Society earned the gratitude of everyone who was privileged to attend.

Now let us look forward to February 7th and 8th. The entertainment committee is at work and you'll hear something very definite soon.

AROUND AMONG THE ARCHITECTS

Two Well Known Indiana Firms Change Office Locations

Architects Austin and Shambleau, South Bend, Ind., announce the removal of their office from 111 N. Lafayette st., to the new Building and Loan Tower, 216 W. Washington st., where they will occupy the entire twelfth floor. Mr. Austin who had been ill for some time has fully recovered and is back on the job again.

* * *

Another announcement has been received from Architect Walter Scholer, Lafayette imparting the information that he has moved from 301 Painters and Decorators Building to Suite 210 Wallace Building, 324 Ferry st.

will be appointed by President Scherkel in the near future.

The election of the Ft. Wayne chapter, Associated Building Contractors of Indiana resulted as follows: President Theodore Buesching, Vice-President, George Irmscher, treasurer, A. W. Kettler. George Schack was appointed secretary. The various standing committees are to be named soon.

INDIANAPOLIS DRAFTSMEN MAKE MERRY AT ANNUAL MEETING

Embryo Architects of Capital City Put on a Great Evening

The murky dampness of the evening did not lessen the attendance nor shorten the evening of pleasure enjoyed Wednesday, December 11th, by members of the Indianapolis Architectural Club at their club election and last dinner-meeting of the year. The "rathskeller" of the Sherman Inn was gaily and appropriately decorated for the occasion and the committee on decorations justly deserved the vote of appreciation given to them. Much amusement and possibly some weight in the electioneering was caused by the introduction by one of the tickets of some colored cartoon slides thrown on the screen. It was easy to say that they were not of the complimentary type, although they were very clever productions.

In retaliation, the other side took the "holier than thou" attitude of "no mud slinging" and their spokeman, Eddie Clemens, expounded the virtues of his ticket with the customary oratory that is always prevalent around election time. The monitors passed the ballots around, much scratching was done, although "the Citizens' Committee" did not endorse any of the candidates.

The totaling of votes gave forth this message for the following year: Howard Foltz, president; Edward Clemens, vice-president; George W. Applegate, Jr., secretary; Francis Schroeder, corresponding secretary; Lot Green, treasurer. For the first time since the organization of the club, a year book was gotten out which was a very fine record of the past year's achievements.

FORT WAYNE NOW HALF A MILLION DOLLARS AHEAD OF THE BUILDING RECORD FOR ENTIRE YEAR OF 1928

Hoosier City One of the Scattered Few of the Country to Show an Increase in Building Construction Volume

There has been much chronicled during the past year setting forth the general decline of new building construction operations in various localities and such information was backed up by figures. But at last one city has been found that looms up like a lighthouse in a fog for it has sailed along, built and built and built some more, to roll up a record for this year that stands out and above, to the extent of $860,792, over the first eleven months of 1928. Too, there have been 324 more permits issued than there were over the corresponding period a year ago.

The city is none other than Ft. Wayne, Ind., which has set a really remarkable pace in view of the off building year that has prevailed throughout the country. It is not only a great performance but unquestionably reflects the prosperity and up-and-doing spirit of the northern Indiana metropolis.

However, this is not all. Ft. Wayne, to December 1, has launched more new building construction work this year than was started during the entire twelve months last year for which period a total of $5,081,185, covering 1655 permits issued, was recorded. As matters stood Dec. 1, the gain for the current year over the volume for the entire twelve months of 1928 was 232 permits issued and $505,125 in estimated valuation. That which is posted in December will be "velvet" and serve to boost the present record just that much more.

With the month of December still to be figured in, the increase for 1929 over 1928 should easily exceed $1,000,000.

The record for November constitutes probably the greatest November building record in the history of Fort Wayne, with a total of 146 building permits issued, valued at $674,388. This was an increase of $139,343 in volume, with a decrease of 67 in the number of permits issued as compared with November, 1928.

Month by month comparisons for the years 1928 and 1929 are as follows:

	1928		1929	
	Permits	Est. Val.	Permits	Est. Val.
January	64	$ 205,025	29	$ 36,430
February	71	156,792	68	168,230
March	181	351,416	196	600,912
April	184	391,229	206	888,792
May	211	729,335	216	670,400
June	152	331,349	200	519,798
July	155	405,221	168	367,730
August	162	919,869	230	665,070
September	141	502,228	215	559,535
October	149	412,056	213	435,045
November	93	320,998	146	674,368
Total	1563	$4,725,518	1880	$5,586,310

QUARTERLY I. S. A. BOARD AND REGIONAL MEETING AT EVANSVILLE DEVELOPED IMPORTANT AND INTERESTING TOPICS FOR DISCUSSION

Matters Brought Up Furnish Definite Focal Points for Annual Meeting Early in February

The Evansville meeting naturally divides itself into two parts, each of real interest and one of powerful importance to the Society.

The important half of the meeting developed in the board meeting in the mornning. Please read the following briefed items and think over their importance to you in your business. Incidentally these things will eventuate in dollars for Indiana Architects, and represent just a small part of what you are receiving for your membership dues (whether you have paid them in full or not—you profit just the same—so don't pay your dues).

Here are the items.

1. Mr. A. G. Bacon of Evansville presented a comprehensive and thought provocative report on the matter of publicity —group advertising if you please—the most vital thing confronting our state organization today. The matter was of so much importance that it was moved that it be made a special order of business for the next regular meeting of the society. If you want a real thrill, plan to attend that meeting, and you better attend if you have any ideas.

2. And the date for the regular convention of the society was selected—at INDIANAPOLIS, FEBRUARY 7th and 8th.

3. The board expressed the disapproval of the society of the advertising of building material in newspapers, magazines, or other mediums that carry with the advertisement illustrations of work poorly designed.

So look through your papers and if you find any such silly infraction of good advertising judgment, cut it out and send it in to the secretary, and we'll get some action.

4. An amendment to the constitution is proposed, providing for membership by registered architects only.

5. We're going to write to the big boys at Washington, requesting that in considering the public building program, they also think of the poor suffering architects and fix it up so that the architectural work in connection with this program will be spread about the country.

That isn't all of it, but that's an indication of what the society is doing for you architects, and yet we presume that you don't half appreciate it, and that you've allowed your dues to become past due.

And the second important half of the day was the evening and the talk from Dr. Allen Albert. Dr. Albert is one of those unusual speakers who can give you a new thrill each time that you listen to him, and it doesn't seem to make any difference how often you listen to him, the new inspiration is always given to you.

He spoke of his trip to the World's Fair of Europe, and his impressions from each. Each fair has its own individual characteristic which Dr. Albert seemed to catch and carry across to his listeners in a way which gave you a picture of the entire show simply by remembering the apparent structural theme of that particular show.

There was the uninteresting bulky masonry of one; the saw teeth of another; the poured concrete of another; the combination of various architectures of Paris; and the water display and illumination in Spain. And then he summed it all up in the theme, which is inspiring, all that they propose to do at Chicago—"That country is going to make the greatest material advance in the next decade which makes the largest advance in pure research."

It was a fine day and the Evansville Society earned the gratitude of everyone who was privileged to attend.

Now let us look forward to February 7th and 8th. The entertainment committee is at work and you'll hear something very definite soon.

AROUND AMONG THE ARCHITECTS

Two Well Known Indiana Firms Change Office Locations

Architects Austin and Shambleau, South Bend, Ind., announce the removal of their office from 111 N. Lafayette st., to the new Building and Loan Tower, 216 W. Washington st., where they will occupy the entire twelfth floor. Mr. Austin who had been ill for some time has fully recovered and is back on the job again.

* * *

Another announcement has been received from Architect Walter Scholer, Lafayette imparting the information that he has moved from 301 Painters and Decorators Building to Suite 210 Wallace Building, 324 Ferry st.

STEEL INSURES STRENGTH AND SECURITY

Steel's

Cards Are On The Table

This picture, taken in the plant of the Pan-American Bridge Co., Newcastle, Ind., shows a 70-foot riveted low truss span for the West Virginia State Road Commission. This span was assembled in position in the plant ready for inspection. The commission knew exactly all about the bridge before it left the structural steel shop.

With what material—other than STEEL—could such procedure have been possible? Steel's cards are face-up, on the table, and, steel always plays the winning hand!

SOME OBSERVATIONS

Glancing Around a Little

A strong national association of contractors including those of the general and specialied class is essential to the success of the Building Industry. A large membership representing the four sections of the country could not stabilize conditions, maintain fair practices among each other, and make the industry one recognized by others and hold a place as fittingly in the minds of the people as it should, being the second largest industry in the country.

* * * *

The contractors of New York City are no different from the contractors of Chicago, Yonkers or Hammond; they are all out to make a living by plying their knowledge of Building Construction to that end—even though some of them may be a little selfish and refrain from going along with their fellows—they can be persuaded if approached properly and made to see the necessity of organized effort.

* * * *

Convention time is approaching and many state and national meetings are scheduled for the months of December, January and February. Contractors who are affiliated with trade associations should bear in mind that much more can be accomplished by a well-attended convention than by one composed only of the dyed-in-the-wool faithful few. A few days away from the office mingling and rubbing elbows with your associates will broaden any contractor's mind as to the value of organization.

* * * *

It has been a question in the minds of many whether the recent stock crisis had any effect upon the slump of construction work throughout the country. Some say it had. Generally speaking the consensus of opinion is that high price of money deferred many from making contracts for much needed improvements and expansions. It is generally believed that the calm of the great storm means that the money market will be easier and that the banks and loan companies will make the means available for a new era of construction. It is believed that real estate bonds will again take their place in the market for sane and safe investments of surplus funds among individuals.—(Natl. Assn. Bldg. Trades Employers' December Bulletin.)

building and separate and sealed proposals for a Superintendent's residence and also combination sealed proposals for the general construction of the Nursery building, Laundry building, and Superintendent's Residence, for and at said Soldiers' and Sailors' Orphans' Home, together with sealed proposals, separate and combination as above for the mechanical installations in and for said buildings and according to drawings and specifications for said work as prepared by McGuire & Shook, architects, and J. M. Rotz Engineering Company, of Indianapolis, Indiana, in whose offices said drawings and specifications are now on file, in addition to filed copies in the office of the superintendent, and the State Board of Accounts.

All proposals must be submitted in a sealed envelope bearing the title of the work, and the name of the bidder, must be submitted on Form 96, as prescribed by the State Board of Accounts and be accompanied by a certified check in a sum equal to two (2) per cent of the whole amount of the bid for each building and in addition shall be accompanied by completely executed Contractors' Questionaire Form 96A.

The Board of Trustees reserve the right to reject any or all bids submitted. Certified checks shall be made payable to Arthur Wolf, treasurer, and will be held by him as evidence of good faith that the bidder will enter into a contract under the terms of his or their bid and the provisions of the drawings and specifications, should they be awarded said contracts, and that they will execute proper bonds for said work which will be equal to the full amount of the contract sums. Checks of unsuccessful bidders will be returned at the earliest possible date.

In the event that the successful bidders (the ones to whom contracts are awarded) fail to enter into contracts with the board and submit proper bonds without delay then the latter will retain possession of and realize on said checks as and for liquidated damages. Copies of the drawings and specifications may be obtained from the architects and engineers upon making a deposit of $10.00 (ten dollars) for each set, and said deposits to be returned to bidder upon the return of the drawings and specifications in good condition on or before the time set for receiving proposals.

BOARD OF TRUSTEES,
HESTER M. HART,
Vice-President.
ARTHUR WOLF,
Treasurer.
JOSEPH A. MINTURN,
Secretary.
R. H. TYNER.
L. A. CORTNER, Superintendent.

SCHOOL HOUSE

NOTICE TO CONTRACTORS

The undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, hereby gives notice that he will receive sealed bids for the construction of a new school house building at the Town of Wolcottville, in said counties, said building to be erected in said Town of Wolcottville, in the county of LaGrange, Indiana. Said bids will be received at the school building in said Town of Wolcottville, Indiana, up to and until the hour of 2:00 p. m. on Saturday, December 21, 1929, at which time and place, all bids received will be opened and read in the presence of the Advisory Board of said Johnson School Township of LaGrange and Noble counties.

Plans and specifications of said work are on file in the office of said trustee and copy of the same may be seen and examined and consulted at the office of Bradley & Babcock, architects, at Fort Wayne, Indiana, where blank forms of proposals and bids may also be had.

Each and every bidder shall, with his sealed bid, and in the same envelope, deposit a certified check for at least three (3) per cent of his bid payable to the order of the undersigned, Charles Rowe, trustee of Johnson School Township, of LaGrange and Noble counties, Indiana, to be retained by him as evidence of good faith and until a successful bidder has, or successful bidders have furnished bond or bonds to the approval of said trustee and said Advisory Board. And each of said bidders is also required to file with his bid or proposal all of the statements and forms required by and in all ways comply with Chapter 202 of the Acts of the General Assembly of the state of Indiana, of 1929.

Said contract or contracts will be awarded to the lowest and best bidder or bidders, as determined by said trustee and said Advisory Board.

Said bidders will be permitted to bid on the said building, including foundation walls, complete, without heating, plumbing or lighting, and on the heating, lighting, and plumbing jobs separately, and also on any combination thereof and on said work of construction as a whole.

The right to reject any and all bids is hereby expressly reserved. Only bids for the work as set out in the plans and specifications therefore will be considered.

The estimated cost of said work, complete is the sum of $49,500.00.

CHARLES ROWE,
Trustee of Johnson School Township of LaGrange and Noble Counties, Indiana.

IMPORTANCE OF CONSTRUCTION INDUSTRY EVIDENCED BY EFFORT MADE TO REVIVE IT AS MEANS TO REHABILITATE BUSINESS GENERALLY

Every Once in a While Men Come to Realize That the Industry Is Really a Factor to Prosperity

Building construction occupies a peculiar position in the scheme of things. It is the second largest industry of them all, and its influence in the business world is far reaching. Upon the activity of building hinges the employment of hundreds of thousands of men and the future welfare of wide and varied manufacturing, commercial and mercantile concerns, in fact, the building industry carries a tremendous responsibility. It is the barometer of the business world and yet it has little or no say as to its future, it just has to take things as they come. If there ever was a football for the Fates to play with, building construction fills that bill. When crises or emergencies arose, other interests turn on building first with the pruning knife, other industries must go on but building, so it seems, can most easily be dispensed with, no one seems to look beyond to figure out just how vitally such stoppage affects other businesses and the employment in those fields beyond.

It is an old, old story. Even the ancients followed the practice nor have those since been able to change it. Greece, Rome and the other ancient powers, when they needed men or resources gave no thought to construction but, when there was unemployment they turned to building and other construction work even though such work was unnecessary, the big thing was to furnish employment, to keep the masses busy, occupied.

Recently, following the stock market crash and the attendant upset condition of the business world, men turned to seek a medium of stabilization and one of the first suggestions that came to their minds was a revival of construction operations. Nothing bespeaks activity and prosperity like the latter.

Anent the current situation the Indianapolis Commercial, legal and financial daily publication of the Capital City, has this to say:

"Strange enough the weak factor in the business situation during the last year threatens to become the strongest factor in business development during the next twelve months. Building has been lagging behind for the greater part of the current year and it now seems a certainty that building operations are to be maintained on an unusually large scale next season. Cheap money has always been an incentive to building development of all types, and the cheap money already has become a reality. That money will be still cheaper there can be little doubt because New York banks already have a surplus of loanable funds."

Thus it looks as if "the football" is to be brought into play again. Construction interests all the way along from the architect clear through to the supplier of final furnishings, who have been sitting on the sidelines, so to speak, all year, are throwing off their blankets, all eager to get in and play the game for all there is to it. And what a game it will be if those interests are supported substantially and given a chance to show what can be done.

More and greater building means but one thing, more and greater business in other fields.

STOCK MARKET CRASH AND ARRIVAL OF INACTIVE SEASON REFLECTED IN BUILDING RETURNS

November Decline One of the Most Drastic in Years

Building permits issued in 587 leading cities and towns of the forty-eight states, in November totalled $191,798,495 compared with $268,499,135 in November last year and with $249,506,155 in October this year. The loss over November, 1928, was 29 per cent and over October, 1929, was 23 per cent and over October, 1929, was 23 per drastic reported by building inspectors from the rank and file of cities throughout the country in recent years.

The total of permits issued in this list of cities as reported to S. W. Straus & Co. for the first eleven months of the current year was $3,223,551,053, compared with $3,563,432,442 for the same period in 1928 and with $3,647,560,274 for 1927. The loss from last year was 10 per cent and from 1927, 12 per cent.

Less Drastic Losses in Big Cities

It is of interest to note that of $191,798,495 new buildings for which permits were issued- in November, $102,445,928 or 54 per cent was reported from the fifteen largest cities of the country. The loss in these cities over November, 1928, was 23 per cent and from October, 15 per cent. In this list Philadelphia, Los Angeles, Baltimore and Pittsburgh reported a larger issuance of permits than for November of the preceding year, while St. Louis, Pittsburgh, San Francisco, Milwaukee and Newark displaed an upward trend from Oyctober.

In New York City, all boroughs showed a decline from October and November last year, excepting Manhattan, where substantial increases over September last year and October this year were shown. The loss for the five boroughs over November last year was 11 per cent; in Chicago the decline for the same comparative period was 23 per cent and in Detroit 46 per cent.

Among the large cities of the country Boston and Washington revealed the most drastic declines. In the New England metropolis permits issued last month were $952,358 compared with $6,762,936 in November, 1928, and with $3,054,558 in October of this year. In Washington the

Reports Reflect Stock Market Crash

While these data on their face are somewhat distressing, the fact should be borne in mind that they very largely reflect the full impact of the stock market crash. The climax of the Well Street debacle was not reached until the beginning of the mid-month period and the various stabilizing and stimulating forces that have since swung into action could scarcely have been expected to exert any great measure of effect on the building situation prior to the end of the month.

The Building Material Market

Indexes of building material prices for November showed a decline from the preceding month. Because of heavy structural steel awards, however, prices for this important material were firm. Portland cement prices also halted their downward trend and in some localities increased. The steadiness, nevertheless, in these items was not sufficient to offset the considerable declines in common brick and lumber items. Starting materials were irregular.

The Labor Situation

Coincident with a drop in building permits throughout the country of more than seasonal proportions came reports from labor officials that among building craftsmen there is considerable unemployment.

Meanwhile, it is significant to note that friendly relations between contractors and union labor were assured at the recent building conference convened at the suggestion of President Hoover.

Developments during the past month tend to show the early formation of some body to handle jurisdictional disputes between various branches of the building organizations. The building trades department of the American Federation of Labor, recognizing the serious need of such a body at this time which would vitally affect the public, the manufacturer, the builder and labor, has extended an invitation to the National Association of Building Trades Empoyers to meet with the executive committee of the Building Trades Department in Tampa, Florida, on January 20. Both contractors and labor officials hope that a recognized jurisdictional body can then be created in order that this issue may be definitely settled.

NOW OR NEVER IS THE TIME FOR ACTION

Never Was There a More Auspicious Moment for the Encouragement of Building Construction

As matters stand now, a real opportunity confronts the building industry. Will advantage be taken of it?

It is hard to recall when so much favorable publicity in a general way was ever directed to construction work. President Hoover started it with his conferences of big business men in Washington at which ways and means were sought to revive the business of the country. The construction industry was called in with others for consideration and it was decided that for the benefit of the country every effort be made to get things started in that field. Government, state, county and city officials together with business men have signified their intention of launching construction projects whenever possible.

Such action is commendable and should have quite an effect in the near future on other building work. The sooner evidences are forthcoming that activities are getting under way, the better it will be, for such evidence will beget confidence and that is what is needed.

However, all the talk in the world will not accomplish much. Just to talk and then sit back and wait for things to develop can only spell disappointment. Every builder everywhere should make it his business to get in a good word for building. The time is ripe if ever it was. The matter has been brought to the attention of the public, thought has been started along that line and a little urging will do no harm. If the money situation eases up a bit, and there are indications that it is headed that way, it will not be long before some of the various dormant projects may be brought to life. Too, there are some public projects hanging fire and with a little persuasion public officials should be swung into action by the argument that this is the season of the year when it is possible to secure more favorable estimates.

Then, also, a good argument to advance to prospective builders, who are contemplating the erection of a building next season, is that architects are in a position now to get out plans expeditiously since the active season is past and they have more time on their hands. Plans started now will escape the spring rush and also be in shape for early figuring at a time when the contractors are not overloaded with estimating. Early bidding, too, is usually productive of more favorable bids than those that are rendered when the busy season gets under way.

Building should be better next year under the general spur of publicity that has been directed its way, but that should not satisfy, all builders should boost the game. Any little impetus they can add to the whole will help and help mightily. It is true it is to their interest, but since other business men are lending every bit of encouragement they can to the building up of the business fabric, and the building industry is an important part of that fabric, no one can accuse the builder of selfishness when he boosts too.

FRENZIED FINANCE GOT IN ITS DIRTY WORK ALL RIGHT

Real Estate Bonds Go Begging and Building Construction Suffers Greatly

It is deplorable that the second largest industry in the United States and one which is recognized as the barometer of the prosperity of the nation and its hundreds of modern cities should be compelled to take a back seat for frenzied finance as evidenced in the battle of the bulls and bears in the stock market.

The high cost of money and the desire of those having it to profit from the great and unprecedent demand has caused banks to refuse to loan money for the improvement of real estate. Financing corporations during the past few months have also refused to loan money for building purposes because of their inability to sell bonds based on real estate and buildings as security.

Building construction has been almost halted and very few new projects are contemplated due solely to the fact that owners are unable to secure an adequate loan for the completion of the building without being forced to accept a larger responsibility than they can assume.

Concerns who loan money to those who desire to improve their holdings, cannot be blamed when one considers that there is no market for the sale of real estate bonds. The possibly easy way to make a killing in the stock markets has turned the head of many who were content with the six per cent bond to that of a get-rich-quick turn by dabbling in the stock market. It is reported that there are hundreds of holders of real estate bonds throughout the country who during the past two or three months have deliberately turned in their holdings at a discount, and played the stock market.

One man in Chicago is reported to have turned in a life savings in bonds to his bank of more than $50,000, receiving the money and absolutely losing it through the purchase of stocks on margin.

Aside from the thousands of building mechanics who are now walking the strets, there are thousands of men and women who have plunged deep into the mire of the stock market and are both much sad-

(Concluded on Page 6)

der and wiser today. What a lesson it has been to them and what a relief it will be when all come back to their senses.

The building industry has been hit hard and will continue to be the innocent target until banks and others realize that construction industry activity is an absolute necessity towards the development and prosperity of any community as well as the nation together with the inhabitants thereof.

Real Estate Bonds are sold in denominations to suit the means of all looking for a sound and safe investment. They are invariably backed by collateral ample to insure their stability and to give an investor a good return on the money which they placed in this kind of security.—(Bulletin of Bldg. Constn., Employers Assn., Chicago, Ill.)

THE LUMBER INDUSTRY HAS BEEN QUITE A FACTOR IN THE STEADY DEVELOPMENT OF OUR COUNTRY

The Latter by Its Rapid Strides, in Turn, Forced the Industry to Quicken Its Pace to Stay in the Race

RICHARD G. KIMBELL, Architectural Supervisor
National Lumber Manufacturers Association

Historically lumber manufacturing has been the characteristic American manufacturing industry. It was the indispensible industry of settlement of the hardy pioneer of manufacturers. The axe and saw were carried by the pioneer as certainly as the rifle and the mill followed close behind throughout all the forest region. All of the early settlers were either part time or whole time lumberman. The farmers had to be loggers as well for the trees had to be cut down before agriculture could begin. The loggers were the road builders of the back woods. The engineers of navigation and the pioneer navigators of the lakes and rivers of the wilderness.

Had it not been for the wonderful development of this industry, dependent of course on the fortunate endowment of the world's best forest, this nation could not have developed as it has. Rapid growth of population is dependent upon shelter as well as cheap and abundant food. Without ample lumber the housing of a population that grew from eight millions in 1820 to 110 millions in 1920 would have been physically and financially impossible. Ninety-eight percent of all rural buildings in the United States are wood. Our villages and cities are almost entirely lumber built at first and to this day 80 per cent of all the buildings, even in our largest cities, are entirely or mostly of lumber. An American home is a lumber home.

In clearing the forest for settlements the lumber industry not only provided building material for the settlers of the forest regions but also provided for the rapid comfortable and sanitary housing of those waves of humanity that spread out over the treeless plans and prairies of the west. It has been stated with all soberness that the forests of the eastern half of our country furnished the lumber that expedited the development of the treeless country by more than one generation. Not only did it supply housing, but the raw material for most of the native industries, the sturdy planks for the ships of the old mercantile marine of the clipper era, for the steamboats and barges of that great age of inland waterway navigation, and though the rails of our transcontinental freight lines are made of steel, they rest on billions of wooden ties, the wires that reported the advance of settlements in the west were and still are hung on millions of telegraph poles. Articles of commerce numbering more than forty-five hundred are manufactured from wood and more than sixty groups of industries are dependent on the forests for their raw material.

The lumber industry is so old that most people accept it as they would air, water and earth. That is to say they are hardly conscious of its existence because of its familiarity. But this ancient lumber industry which began to apply mechanical power to the manufacturer of its product more than three hundred years ago has in recent years renewed its youth.

So well entrenched was the lumber industry in American life, custom and habits that it became indifferent to the rapid changes of passing years. Like many other old institutions it thought that what had been would always be, and that now forevermore the lumber industry could content itself with turning out its product in the same forms as in the past and the public would beat a pathway to its door.

But this industry awakened to discover that no institution can exist very long on a reputation that is not renewed. In self defense the lumber industry was compelled to modernize itself. In these complex times modernization means first of all organization. Almost every phase and factor of the lumber industry is now organized and usually well organized. The manufacturing industry is organized by regions and species and these in turn are grouped together in a national organization.

Everyone of these manufacturing groups is organized for definite practical purposes. Most, if not all of them, have considerable staffs of technical and merchandising specialists conducting intelligent advertising programs and performing practical services of many sorts. Within the organizations of the industry are such functions as lumber statistics, forestry, economics, taxation, standardization, publicity, advertising, merchandising, engineering research, architecture and building code consulting services, all of which means much to the construction industry. (Excerpt from Address Before Indiana Building Congress.)

MOVES TO NEW QUARTERS

Reorganized Indianapolis Building Supply Firm Increases Its Facilities

Recently announcement was made at Indianapolis of the consolidation of four prominent metal building supply and specialty firms, James Carmine & Co., Central Wire Iron Works, Diamond Wire and Iron Works and T. Roch, ornamental iron. The new company is now known as the Engineering Metal Products Company.

This company has taken over the plant at 401 S. Harding street, formerly occupied by the Robert E. Berner Structural Steel Co., and has moved from the old location at 311 E. South street, to the new plant.

PLANS FOR STATE A. B. C. CONVENTION ARE BREWING

Evansville Contractors Busy on Arrangements

Just a little over a month intervenes until the Twelfth Annual Convention of the Associated Building Contractors of Indiana will be called to order at Evansville. At least that is the present arrangement.

The local committee in charge of plans for the gathering has sent into Indianapolis headquarters of the state contractors association the word that the dates for the convention have been definitely set for January 28 and 29. All sessions will take place at the Vendome Hotel.

The Evansville contractors elated that the state contractors are to meet in their city are busy lining up good speakers for the convention, also entertainment features and announce that when all is said and done it will be the best program ever offered at a State A. B. C. gathering.

Official Paper

Indiana Society of Architects

Office of the Secretary

909 Architects and Builders Building, Indianapolis, Ind.

THINK IT OVER, DO YOUR PART BY YOUR PROFESSION

The New Year Affords an Opportunity for All to Advance the Architectural Cause in Indiana

The curtain is descending. This year's act is all but over, and yet the show is not done, it goes on and on, continuously, and we in our given roles must do our part. The cast is enormous, there is the architect, the doctor, the lawyer, the engineer, the business man and so on down the line, all actors in the Great Drama.

Before the curtain arises again on the acts to follow, why not ask ourselves if we, as architects, are giving our all to make our performance complete?

It is not so much what we do as how we fit in. Are we edging over toward the splotlight individually, or are we working along in harmony with our own fellow actors toward a definite result by means of which all will profit? How many have submerged the profession for self?

All of us as architects enjoy the distinction of being professional men. For that distinction something is surely due the profession. Is it fair that we take and take and take to give nothing in return? Theodore Roosevelt once said, "Every man should devote a portion of his time to the building up of the profession or industry of which he is a part."

Some, quite a few of the Indiana architects, have followed that principle, and the upbuilding they have done for their profession has benefited every architect in Indiana in a general way. The elevation of the profession has been accomplished through the Indiana Society of Architects of which they have been an active part. Year after year the Society has moved ahead in a constructive way to advance not individuals, rather, the profession. The whole story of the Society is one of professional progress.

It is not a personal matter as some are inclined to believe. Instead, the whole scheme is one of collective effort. Distinct and varied opinions have constantly ruled and by this interchange of ideas have results been obtained. That is one thing certain architects fail to understand, they seem to think that cliques have manipulated the machinery. Said cliques were but the workers who kept things moving despite overpowering discouragements at times. The impetus back of it all was professional inspiration rather than personal gain.

Some years ago a man prominent in Indiana building construction circles in referring to organization difficulties said the greatest handicap to growth was due to the fact that the keen competitive nature of the contracting business kept builders apart. Waiving aside the professional phase of architectural practice, and considering the business element that is involved in the practice, it seems that that same keen competitive feature intrudes in the professional architectural sphere to keep architects apart to a considerable degree.

The situation as it applies to the Society was well illustrated at a luncheon club meeting recently in the words of the featured speaker who said "there are always the growlers and the men who do things. The former hold aloof, condemn If one does, and condemn if one doesn't. They never jump in to try to aid. On the other hand, the doers go right ahead trying always to accomplish something worthwhile despite the discounting of their efforts."

And now, as the curtain descends, before the next act begins, think it over. As an architect, are you a professional growler or doer, are you in or out of step with the professional architectural ensemble. Are you giving any time to the upbuilding of the profession of which you are a part? Individual men whom you may not like or with whom you may disagree, have nothing to do with the scheme, it is your interest in and alignment with your profession that counts.

REGISTRATION LAW RECOGNIZED BY NATIONAL ASSOCIATION OF CITY DIRECTORY PUBLISHERS

Registered Architects Have a Strong Point in Their Favor

A point of interest to architects, and especially those of Indiana who are now practicing under the provisions of the new Architects Registration Law, was brought to light recently at Detroit and shows that such a law does carry weight with others outside the profession.

It seems that several Detroit architects upon being solicited by the R. L. Polk Co., publishers of the city directory, for contracts listing their names in bold face type under the heading "Architects," refused to renew their contracts on the ground that some names under heading were unfair in that the men so designated were not registered and were therefore using the title in violation of the state law.

The position taken by the architects caused quite a stir and resulted in a special called meeting of salesmen and executives of the directory publishing company, to go over the matter. It did not take long to thresh it out as William McPharlin, an official of the company and chairman of the Committee on Clasification Headings of the Association of North American Directory Publishers, ruled that no such contract will be accepted without the applicant being registered.

That ruling applies to all other states where a registration law exists. Fact of the matter is, one of the printed rules on classification published by the National Committee fully covers this question.

It would be well for the registered architects of Indiana to remember this and as a means of reinforcing the law, protecting the profession and themselves, insist that local directory publishers follow the letter of the rule of the National Committee as set forth. If this is done, it will give to the registered architects of Indiana the distinction and prestige that is their due.

Sana-bestos Tiles

Answer Every Question You May Ask About Flooring

THEIR moderate cost, beauty and permanence make Sana-bestos Floor Tiles the ideal flooring for schools, churches, hospitals, stores, apartments and homes.

A Sana-bestos floor is noiseless, resilient, easy to the tread, yet wears like stone. Sana-bestos Floor Tiles are especially desirable for severe service.

Inexpensive: Moderate first cost, no upkeep expense.

Easily and Quickly Applied: Over any new or old sub-floors by an average workman.

Durable: Sana-bestos Tiles are non-dusting, fire, water and acid-proof. They preserve their fresh appearance through years of terrific wear.

Sanitary: No waxing or oiling—simply wash with water.

Distinctive Appearance: A variety of rich colors that harmonize with any artistic layout, including Black, Maroon, Red, Brown, Green. (Sana-bestos Tiles cannot be made in light colors.)

Guarantee: A uniformly standard product. Every shipment tested and inspected.

Sana-Bestos Heavy Duty Tiles—Sana-bestos Tiles for industrial use, are manufactured ½ inch in thickness. They may be laid either in our special plastic cement or in concrete. When laid in concrete, they may be used out of doors as well as indoors, with excellent results.

Manufactured and Guaranteed by

STEEL INSURES STRENGTH AND SECURITY

Steel is ideally suited to this producer gas flue for the Hart Glass Co., Dunkirk, Ind. Steel fabricated and erected by Indiana Bridge Co., Muncie, Ind.

Steel Offers Strength,

The strength of steel is definitely known when it is manufactured. It is not changed by time or climatic conditions. Steelwork is designed according to correct engineering principles demonstrated by long experience. It is mechanically fabricated and erected by skilled workmen. Its inspection is positive and the completed work has known strength and quality.

Durability of steelwork is unlimited when protected from the destructive action of the elements which also destroys all other structural materials used for the same purpose.

Adaptability permits the removal, replacement, rearrange-

ORPHANS' HOME BUILDINGS

NOTICE TO CONTRACTORS

Notice is hereby given that the Board of Trustees of the Indiana Soldiers' and Sailors' Orphans' Home, near Knightstown, Indiana, will at the hour of 10:00 o'clock A. M., of December 30, 1929, at the office of the Superintendent of said Soldiers' and Sailors' Orphans' Home, receive separate and sealed proposals for the general construction of a Nursery Building and separate and sealed proposals for the general construction of a Laundry building and separate and sealed proposals for a Superintendent's residence and also combination sealed proposals for the general construction of the Nursery building, Laundry building, and Superintendent's Residence, for and at said Soldiers' and Sailors' Orphans' Home, together with sealed proposals, separate and combination as above for the mechanical installations in and for said buildings and according to drawings and specifications for said work as prepared by McGuire & Shook, architects, and J. M. Rotz Engineering Company, of Indianapolis, Indiana, in whose offices said drawings and specifications are now on file, in addition to filed copies in the office of the superintendent, and the State Board of Accounts.

All proposals must be submitted in a sealed envelope bearing the title of the work, and the name of the bidder, must be submitted on Form 96, as prescribed by the State Board of Accounts and be accompanied by a certified check in a sum equal to two (2) per cent of the whole amount of the bid for each building and in addition shall be accompanied by completely executed Contractors' Questionaire Form 96A.

The Board of Trustees reserve the right to reject any or all bids submitted. Certified checks shall be made payable to Arthur Wolf, treasurer, and will be held by him as evidence of good faith that the bidder will enter into a contract under the terms of his or their bid and the provisions of the drawings and specifications, should they be awarded said contracts, and that they will execute proper bonds for said work which will be equal to the full amount of the contract sums. Checks of unsuccessful bidders will be returned at the earliest possible date.

In the event that the successful bidders (the ones to whom contracts are awarded) fail to enter into contracts with the board and submit proper bonds without delay then the latter will retain possession of and realize on said checks as and for liquidated damages. Copies of the drawings and specifications may be obtained from the architects and engineers upon making a deposit of $10.00 (ten dollars) for each set, and said deposits to be returned to bidder upon the return of the drawings and specifications in good condition on or before the time set for receiving proposals.

BOARD OF TRUSTEES,
HESTER M. HART,
Vice-President.
ARTHUR WOLF,
Treasurer.
JOSEPH A. MINTURN,
Secretary.
R. H. TYNER.
L. A. CORTNER, Superintendent.

BACK TO THE PIONEER DAYS OF ARCHITECTURAL PRACTICE IN INDIANA

Chance Reveals Some Delightfully Interesting Information Regarding an Early Hoosier Builder

By KENNETH LOUCKS

This is the interim. Up to now one has read of building volumes, wage scales, speeches on sundry phases of the construction industry, in fact a polygot assortment of material that might well be classed as business. Along comes Christmas, The Holidays; there is a certain degree of letting down, an easing up, a spell of relaxation, the tension is off momentarily. Hence let's turn to a bit of retrospection.

Folks, today refer to the "skylines" of cities. How about the "skyline" of the States? They have them just as well as the individual municipalities, but stretching out and across greater areas, they do not stand out in such contrast as do those of the cities. And Indiana's "skyline," how about it? Just when did the age old "skyline" of the great and famous Hoosier forests give way to the more modern and growing one of an architectural nature in this section? Who were the builders who first topped, then surpassed, with their structures, the heights of the forests? It is a question that must remain unanswered.

If one was to follow that skyline of Indiana of the present day he would find in his charting many buildings done years ago still standing, useful and of good architectural lines. Who were those architects who gave their ability, and it was no mean one, to erect those early structures that have stood the ravages of time and reached over into our modern times almost from the log-cabin era?

While not fully satisfying curiosity on the above score, nevertheless, a quirk of Fate brought modern architecture into the scheme to solve, in a way, a few details relative to one of the early architectural practitioners, a man who almost a hundred years ago was planning and building structures in the then young commonwealth of Indiana.

A Dilapidated Old Leather Trunk

Back in an attic where for years it had reposed, first here then there, was an old leather trunk, bound round with straps that had come to the point where they just held together and that was all. Shunted from pillar to post, probably in the darkened corners of garrets as old things like that come to do, there came a time when even the attic was invaded; a new and modern home was built, preparations were made for moving, things were gone over, sorted out as the collection of years are, and into the discard with other things went the trunk. It was so old and decrepit looking no one seems to have given it even the courtesy of an inspection. The old straps were not even molested, silently the trunk went its way with other things for which there seemed to be no further use. Its secret was still its own.

The journey's end, it appeared, had just about been reached by the old leather trunk. Into a corner, a dark one again, of an auction house landed the trunk, there to sit overlooked, neglected, as had become its custom. Then came a day when the auction house found need for a cleaning out and into a pile of litter, more or less, went the trunk, to be offered for public sale. A batch of stuff was sold and the old trunk was thrown in for a quarter extra. The whole went to one of those characters who hang around auction houses with the hope of picking up something cheap.

Curiosity the Key to An Interesting Secret

It so happened, a certain person, interested in old stamps, letters and documents, had his curiosity aroused when he heard about the trunk and set about to locate it. However, the purchaser beat him to it, for, having heard of the former's interest, the latter hunted him up, and once again the old trunk changed hands for a cash consideration that was almost negligible.

When the lid was opened and a sorting out was begun it was found that the contents consisted of neatly tied packets of letters, each carefully marked—"Correspondence of 1832," "Correspondence of 1837," "Correspondence of 1846," and so on covering a period from 1830 to 1860. Also, there were newspapers of the 1840 vintage having been printed in Indianapolis, Ind., and Baltimore, Md. There was a land grant dated April 1750 for 200 acres in Pennsylvania.

And now to get down to the real interest of architects in the old trunk. There was a layer of architectural books bearing the dates of 1846 and 1847. Beneath the books were rolls and rolls of plans, architectural data notes, memorandum books with carefully itemized costs on various construction projects. (Even in those days, it appears, that some architects kept cost systems.)

This insight into early Indiana architectural effort was of immense interest. A careful perusal of the various papers and a piecing together of the information gleaned revealed that the contents of the trunk had been the property of John Elder who had been an early builder in this state. Unquestionably he was a man of unusual ability in building construction and rated high for he built many structures in the early days of Indiana and Indianapolis. He was a man of diversified accomplishments, possessed abundant energy and had an adventurous nature. While no definite dates as to his birth were given, certain references indicate that he was born at Harrisburg, Pa., along between the years of 1785 and 1800.

The first direct information relative to the activities of this Indiana architect and builder is contained in letters and papers dated 1828 and tell of his endeavors while working on the Juanita Division of the Pennsylvania Canal, near Huntingdon, Pa.

During the year 1831 Mr. Elder worked on a contract to build shoals in the river at Florence, Ala. An interesting account of his various operations and disbursements were kept in a small note book. Particularly interesting in this connection are notations dealing with his itinery from Pennsylvania to Florence, Ala. He journeyed by stages to Pittsburgh, Pa., Wheeling, W. Va., Cincinnati, then took a boat to Louisville, and then proceeded by stage again to Nashville, Tenn., Huntsville, Ala., and Florence, Ala.

Proposal to Build State House Attracts Attention of This Pioneer Architect

In the fall of 1831 Mr. Elder had returned to Harrisburg and observed in an eastern newspaper a legal notice issued by the State of Indiana asking for architects to submit plans for a state capitol building at Indianapolis. The advertisement designated that any architect interested should get in touch with the State Commissioners at Indianapolis and was signed by James Blake. Enclosed in a letter from this James Blake, in answer to one sent to him from Mr. Elder was the notice that Mr. Elder read. Mr. James Blake's letter reads as follows:

Indianapolis, Ind., Sept. 3, 1831.

Mr. John Elder, Dear Sir:

Your favor of the 23rd of August was received this morning but not in time to send an answer by return mail. To some of your inquiries I cannot give definite answers, not having such information as is necessary. How soon after the Legislature has convened it will consider the plans that may be submitted for approval, I cannot say. Probably during the second or third week of the session, its decision will be known which will be the middle or latter part of next December. I do not think the originator of the plan adopted will be entitled in virtue of that cimcumstance to the contract for raising the edifice; at all events that will depend entirely on the will of the Legislature. A law must be passed before the building is commenced, which may afford any disposed to undertake the work opportunity of offering.

Timber of the dimensions stated in your letter can be obtained—Oak, ask, poplar and walnut, can be procured within four to five miles from town. The ground on which the building will be erected is level and the nearest point of the Ohio River is eighty-five miles.

In reply to your last inquiry, I have hereby to state that the section of country in which those reside who compete for the work will not throw any difficulty in their way.

Very respectfully yours,

James Blake, Commissioner.

Mr. Elder did not receive the commission to build the Capitol Building as Mr. Ithiel Towns' design was selected and he built a structure that served the state for forty years. Mr. Elder presented for consideration three drawings of the exact dimentions of the successful plans. Both designs were of Grecian style of architecture. Several present day architects have admired Mr. Elder's plans which were found in the trunk and have been preserved.

First a Tavern Keeper in These Parts

His interest in Indiana culminated in his coming here to live in the latter part of 1833 in company with his family and a Joseph Mathers also of Harrisburg. These took over the management of a tavern owned by Governor James Brown Ray, and while Elders and Mathers operated it it was called the Union Inn. Histories of Indianapolis do not mention the Union Inn Tavern, but they do state facts that combined with information offered by the trunk indicate that the building was located on the south side of Washington street opposite the court house. This deduction resulted from a notation written on the back page of a register that was kept of the Union Inn. It reads:

"Received Dec. 14, 1833 from Elder and Mathers, $31.10 in full for plastering three rooms and patching others in the house they now occupy, the property of Gov. Ray. (Signed),

William Lingenfelter."

An early history tells us that Gov. Ray purchased his tavern building from Major Thomas Carter. Major Carter was about the first to start a tavern in Indianapolis. He built a double log cabin in Berry's Trace early in 1821 and called it a tavern. This cabin lay between Washington and Market streets, just east of Illinois. A short time later he built a one and a half story frame building in front of the cabin on Washington street. He did not keep this tavern very long but built a third on Washington street opposite the court house. Here he was very unfortunate. About two weeks after the Legislature convened, in January 1825, this house burned entirely to the ground. It took fire from a keg of ashes. In the Spring of 1826 he purchased a two-story frame house of Jacob Crumbaugh, that stood on Washington street, just west of the canal. This house he moved along Washington street to the site of the burned building. The removal of this building occupied several weeks, causing more stumps and logs to be burned and removed from the street than anything that had yet happened. Later he sold to Gov. Ray who had a sign painted one one side reading, "Travelers' Ray House, Cheap" and the other side "Travelers' Ray House, Cash."

Mr. Elder operated the Inn from December 1833 to April 1836 and registered 4,663 guests in all during that period. These names occupy two register books and the design of the register is worth telling about. There were nine columns across the page for each entry. First the date, then the signature, then a B-D or S, meaning starting at breakfast, dinner or supper, then the room number (ten rooms were used for guests, in all) then their place of residence, then their destination, then the date they departed, then their registration number and last and most interesting of all was a column for "remarks." And what a variety of remarks An entire book could be written about them, alone. Some voiced their presidential preference, such as Andrew Jackson, Henry Clay, William Henry Harrison, Van Buren, Dick Johnson, David Crockett, John Quincy Adams, and many others. Some were entering land, some enroute to the far west, and countless other remarks. One pathetic entry clings to my memory from its first reading, "While crossing White river this morning I lost two horses by drowning."

Initial Indiana Architectural Project Was a New Court House for Clinton County

This Indiana pioneer started his building career in Indiana in 1836, first of all building the Clinton County court house at Frankfort. All the letters, material bills and account books pertaining to this work are preserved. He was town assessor of Indianapolis from 1836 to 1837 and served on the Town Common Council from 1838 to 1839, proving how quickly he had aclimated himself to his new surroundings.

In 1834 the Legislature chartered the State Bank of Indiana, with a capital of $1,600,000.00. Up to that time Indianapolis had contained nothing but a small private bank. The main bank and one of its branches located in Indianapolis. The bank began business Nov. 26, 1834 in the building on the Governor's Circle which had been intended as a residence for the governor. In 1840 the bank removed to its new building at the corner of Kentucky avenue and Illinois street, Mr. Elder drafting the plans and erecting this building, he also made plans for the Indianapolis branch bank, these being the first bank buildings of any consequence in the city. Interesting pictures of these two bank buildings can be found in the Centennial History and Handbook of Indiana.

In 1837 the early architect erected Washington Hall, the best hotel building in the town until a few years later when the Palmer House, at the southeast cor-

(Concluded on Page 6)

ner of Washington and Illinois street, was built after his plans, too.

Three letters of recommendation of John Elder, by prominent citizens of Indianapolis tell of his worth.

Indianapolis, Dec. 5th, 1843.

Mr. William E. Marsh,

Galt House, Cincinnati, Ohio.

Much Esteemed Friend:

Permit me to introduce to your acquaintance Mr. John Elder of Indianapolis who is on a visit to your city, for the purpose of undertaking the building that is to be let in Fifth street. Mr.' Elder has been the builder of both banking houses in this place, also both of the large hotels. He is looked upon as one of the best draftsmen in the west. He is an active, energetic man, of good character. Any assistance you may be able to render Mr. Elder will be reciprocated by many of your friends.

Very respectfully,

William Elliott.

Here is one from Gov. Noah Noble:

Indianapolis, 8th Dec. 1843.

M. E. Williams, Esq.

Cincinnati, Ohio.

My dear sir:

I beg the favor of introducing to you the bearer, John Elder, Esq., my friend and neighbor. He visits your city to offer the plans of a public building, of which you no doubt have some knowledge, but has the benefit of few acquaintances, and therefore needs the advice and acquaintance of some one to introduce him to the officers or committee to whom his drawing is to be exhibited. Mr. Elder most justly stands at the head of the list of builders and artists in the state, is one of our best citizens, is generally beloved, and is highly deserving the confidence and respect of this committee.

Very truly your friend and servant,

Noah Noble.

From Samuel Merrill, president of the State Bank:

Indianapolis, Dec. 9, 1843.

Mr. E. Poor, Esq.

South side of 5th near Main Street,

Cincinnati, Ohio.

Dear Sir:—Mr. Elder, a citizen of this place who has been employed as an architect for some years visits Cincinnati to obtain employment. Mr. Elder had the superintendence of the building of a very fine church in this place and also the State Bank which is a good house and he also had the oversight of the erection of several good court houses in this part of the state. If it comes in your way to advance his interest and extend his acquaintance I shall be gratified.

Yours truly,

Samuel Merrill.

Drew Plans For First State Insane Asylum at "Mount Jackson" Indianapolis

Following a lecture on mental diseases, by a specialist from Chicago, members of the Indiana Legislature in 1843 instructed Gov. Samuel Biggers to obtain plans for the erection of suitable buildings for an insane asylum. John Elder was selected as the architect to draft these plans. At the next session of the Legislature, in 1845, plans were approved and a tax of one cent on each hundred dollars worth of property was levied to provide means for erecting the buildings. All this was but carrying out a direction in the constitution adopted at the organization of the State, one of the cares of the framers of that document being to provide for the unfortunate. A site for the proposed buildings was selected at "Mount Jackson," where the hospital now stands. The work of construction was begun at once and the main building was completed the next year at a cost of $75,000. Every convenience and comfort for this class of unfortunate was provided. Mr. Elder kept his accounts of fees and superintending charges with such exacting detail that they afford very interesting reading.

In 1846 he prepared plans and specifications for the first store building erected by Charles Mayer. It is said that Mr. Mayer started business with a dozen ginger cakes, a jar or two of candy, and a keg of beer, then added a few toys until today Charles Mayer and Company is the largest store of its kind in the middle west. He made plans for Hervy Bates for store buildings along Washington street. A young minister, Henry Ward Beecher, afterwards to become famous as a lecturer chose Mr. Elder to prepare plans for his dwelling house in Indianapolis, in 1846.

The Methodist church in Indianapolis was then divided into the Eastern Charge Methodist church and the Central Charge Methodist church and their new buildings were designed by Mr. Elder. Many residences constructed about this time were of his planning. Between 1846 and 1848 he designed and constructed the court house at Rushville, also a Methodist church, the court house and a Presbyterian church at Connersville. A little later he submitted plans for a court house at Helena, Ark., a church building at Madison that is said to be still intact, a seminary building at Noblesville, Marion county poor house, two tavern houses and a warehouse and pork house. All these are mentioned in one little book and his fee for plans is not over $15.00 for any one commission.

Apparently Had a Hand in Designing Original Blind School for the State

John Elder may have had a part in the blind institute buildings that are still used but are soon to make way for the War Memorial Plaza. Just how much he had to do with this project is not definitely determined but here is information shown from the depths of the old trunk. In the winter of 1844-5, through the efforts of James M. Ray, William H. Churchman, of the Kentucky Blind Asylum, was brought here with some of his pupils and gave an exhibition or two in Mr. Beecher's church. This had a decidedly good effect on the Legislature, which was then in session, and a tax of 1-5 of a cent was levied to provide support for the blind. James M. Ray, George W. Mears and the secretary, auditor and treasurer of the state were appointed a commission to carry out the work either by the establishment of an asylum or by providing for the care and education of the blind at the institution in Ohio or that in Kentucky. In 1847, James Ray, George W. Mears and Seaton W. Norris were appointed to erect a suitable building for the purpose and $5,000.00 was appropriated for a site. Mr. Elder has the following information jotted down in his fee book:

Trustees for Blind Institute

To drafting for Main building $50.00

To drafting and specifications and sectional drawings for work shop.. 40.00

90.00

Received in cash 40.00

Balance due $50.00

Local histories give Francis Costigan credit for designing the present buildings at the Blind school but it would seem from notations that Architect John Elder at least figured in the beginning of the erection of that institution.

Mr. Elder was a part of many other important issues of that day, but as a builder he was most prominent. He drafted plans and supervised the construction of prison buildings at Jeffersonville, his instruction being personally given him by Gov. James Whitcomb. He was a contractor on a part of the Central Indiana Canal, also on part of the Indianapolis and Madison railroad.

The story of this pioneer builder of Indiana, as revealed by the old discarded leather trunk, runs clear through to a conclusion, even telling of his end. Those final chapters are full of romance, ad-

NATIONAL LEGISLATION UNDER WAY THAT WOULD GIVE THE ARCHITECTS A RECOGNIZED POSITION IN THE OFFICIAL BUILDING CONSTRUCTION SCHEME

Indiana Society of Architects Joins In Nation-Wide Move

Ever alert to current moves, that are of interest to architects as a whole and will serve to strengthen and advance the cause of the architectural profession, the Board of Directors of the Indiana Society of Architects at a recent regional meeting at Evansville, Ind., proved they were "sticking closely to their knitting" by getting into a national issue, and lending the support of the Society to the promotion of a scheme that should, if successful, result in merited and just recognition of the architectural profession in an official way.

The whole thing is best explained in a letter that was dispatched to Washington, D. C., by the I. S. A. secretary upon instructions voted by the board. Here it is:

"Indianapolis, Ind., Dec. 10, 1929.

Hon. Richard N. Elliott, House of Representatives, Washington, D. C.

My dear Mr. Elliott:

The Board of Directors of the Indiana Society of Architects met at Evansville on December 6th, and after a considerable discussion of that measure pending in the House, which provides for a public building program, instructed the undersigned to write to the Indiana delegation in Congress, conveying our thoughts relative to it. I am therefore writing this letter to each of the representatives from the State of Indiana.

We feel that the architects constitute a branch of the building industry which in common with the remainder of the industry has suffered from a depression in the construction business.

It is our understanding that this public building program was designed primarily to maintain a balance of productive activity which was perhaps disturbed by the recent depreciation in securities, and the slowing up of the building business which preceded this depreciation. We feel that it is fair and just that the profession of architecture should be included in this promotional measure.

We believe further that a distribution of the architectural work involved in this building program would bring about one particularly desirable result. We believe that it would result in the elevation of the standards of design for the public buildings involved.

If qualified architects from the localities benefitting by public buildings were selected to do the work, we believe the improvement would result from two sources. First, the architects selected would be better acquainted with qualified local contractors, with applicable building materials, and with a type of design which would best fit in with the physical requirements of the locality concerned. Second, each project would result in a more inspired solution due to the individual architect's price in his solution, and due to the more intimate contact which each architect would have with his job, by contrast with the impersonal contact which the Treasury now gives to more or less stereotyped work. We feel that the Government would lead in inspirational architectural work. We are presuming that the architects would be glad to have their work passed on by the Commission of Fine Arts at Washington.

We therefore bespeak your support of our contention, that the measure providing for a program for public building should also provide for a distribution of the architectural work involved among the architectural firms in the localities benefiting from the program.

Very truly yours,

GEORGE CALEB WRIGHT,

Secretary Indiana Society of Architects."

It has been indeed gratifying to receive in reply to that communication a response to the effect that House Bill 6120, covering the matter, has been passed by the House of Representatives. This bill in substance instructs the Secretary of the Treasury for the United States that he can employ outside architectural services to such extent as he may require.

This looks encouraging, even though it is only the beginning and there is still quite some distance to go since both the Senate and the President will have to pass favorably upon it before it becomes effective. If the bill does go through as it now stands it will be a big thing for the architectural profession. However, regardless of the final outcome, it is gratifying to realize that the Indiana Society of Architects has extended its aid and moral support to a move of such consequence to the profession and proves again that the state architects' association is alive to the issues and opportunities that present themselves.

BACK TO PIONEER DAYS

(Continued from Page 6)

venture and even tragedy, even as one might expect in the life of a pioneer.

Joined the "Forty-Niners" in Rush for Gold and Finally Died in California

In his later years his wife had died, his children were grown. The papers were full of the discovery of gold in California and John Elder, pioneer, could not resist the lure. His work all cleaned up, he struck out for the Land of Promise. The letters he wrote back to Indiana are fascinating. They tell of his journey by boat to Panama, the trek of the isthmus, up the west coast into the "diggings," his hardships, experiences and thoughts are all expressed in letters he wrote back home to his family. But even in this land of gold two other things were uppermost in his mind. First of all his children, and second, his architectural and constructive knowledge. While in California he submitted a design for the first capital building for that state. He helped construct a dam whereby gold might more easily be gotten from the river. Unfortunately his last piece of construction helped to cause his death. Being thwarted by the elusive gold he conceived the practical idea of building a ferry boat for crossing a turbulent stream and successfully operated it. While at this he took cold from exposure and shortly passed away.

WELL KNOWN INDIANAPOLIS ARCHITECT TO DIVERT ENERGIES TO ANOTHER SPHERE OF ENDEAVOR

Fermor Cannon Announces Business Change

Indiana architectural circles are due, after January 1, to lose one of the most ardent defenders of the profession, one of the most conscientious workers in the professional cause and one who constantly has labored sincerely with others for the advancement of the building industry as a whole.

Reference is made to Fermor Spencer Cannon, Indianapolis architect who announces that he is withdrawing from the practice of architecture and after the first of the year will be actively associated with The Railroadmen's Building and Savings Association, 21 Virginia avenue, Indianapolis, as a vice-president.

His passing on to the financial field will be a real loss to the profession for he has been active in its welfare for a number of years. He served on several important committees, at various times of the Indiana chapter, American Institute of Architects, and the Indiana Society of Architects, also as secretary for both organizations and, too, had been elevated to the office of president of both these bodies. In addition to those honors he also served as a member of the Advisory Committee to the Administrative Building Council of Indiana and played a leading role in the formation and compilation of the Standard Building Rules and Regulations for Indiana as promulgated by the State Building Council under authority of a law passed by the State Legislature in 1923.

Mr. Cannon is a graduate of Illinois University and during the course of his professional practice designed plans for and supervised the construction of a number of prominent buildings in Indianapolis, also many fine residences.

The departure of Architect Cannon from the architectural field will be regretted by all who know him and who have the interest of the profession and the building industry at heart, for he was a worker who by his actions brought dignity, honor, progress to both fields. The sincere and profuse congratulations of his associates and co-workers accompany him into his new field of endeavor.

Build with Steel in 1930

The Federal Government and Big Business have announced for 1930 a program of development and progress that will be the greatest in American history. Business expansion means more building, more remodeling.

The wise builder will use S T E E L. Steel not only is the strongest, safest and easiest material to handle, but also makes possible greater building speed, and provides a finished structure that can be enlarged or remodeled with the least effort and expense.

Build with S T E E L, furnished by a member of the Indiana Structural Steel Board of Trade, who offer you their sincerest wishes for success and prosperity during 1930.

ORPHANS' HOME BUILDINGS

NOTICE TO CONTRACTORS

Notice is hereby given that the Board of Trustees of the Indiana Soldiers' and Sailors' Orphans' Home, near Knightstown, Indiana, will at the hour of 10:00 o'clock A. M., of December 30, 1929, at the office of the Superintendent of said Soldiers' and Sailors' Orphans' Home, receive separate and sealed proposals for the general construction of a Nursery Building and separate and sealed proposals for the general construction of a Laundry building and separate and sealed proposals for a Superintendent's residence and also combination sealed proposals for the general construction of the Nursery building, Laundry building, and Superintendent's Residence, for and at said Soldiers' and Sailors' Orphans' Home, together with sealed proposals, separate and combination as above for the mechanical installations in and for said buildings and according to drawings and specifications for said work as prepared by McGuire & Shook, architects, and J. M. Rotz Engineering Company, of Indianapolis, Indiana, in whose offices said drawings and specifications are now on file, in addition to filed copies in the office of the superintendent, and the State Board of Accounts.

All proposals must be submitted in a sealed envelope bearing the title of the work, and the name of the bidder, must be submitted on Form 96, as prescribed by the State Board of Accounts and be accompanied by a certified check in a sum equal to two (2) per cent of the whole amount of the bid for each building and in addition shall be accompanied by completely executed Contractors' Questionaire Form 96A.

The Board of Trustees reserve the right to reject any or all bids submitted. Certified checks shall be made payable to Arthur Wolf, treasurer, and will be held by him as evidence of good faith that the bidder will enter into a contract under the terms of his or their bid and the provisions of the drawings and specifications, should they be awarded said contracts, and that they will execute proper bonds for said work which will be equal to the full amount of the contract sums. Checks of unsuccessful bidders will be returned at the earliest possible date.

In the event that the successful bidders (the ones to whom contracts are awarded) fail to enter into contracts with the board and submit proper bonds without delay then the latter will retain possession of and realize on said checks as and for liquidated damages. Copies of the drawings and specifications may be obtained from the architects and engineers upon making a deposit of $10.00 (ten dollars) for each set, and said deposits to be returned to bidder upon the return of the drawings and specifications in good condition on or before the time set for receiving proposals.

BOARD OF TRUSTEES,
HESTER M. HART,
Vice-President.
ARTHUR WOLF,
Treasurer.
JOSEPH A. MINTURN,
Secretary.
R. H. TYNER.
L. A. CORTNER, Superintendent.

HOW TO BE A FAILURE

Some Pertinent Instructions Along That Line Outlined

There are so many "success stories" going the rounds just now that it is possible that a few instructions on "how to be a failure" would not be amiss. Just adhere to the following instructions and there will be little doubt as to your ultimate end.

Don't advertise. Advertising is the bunk and should be forgotten. Let your competitor throw away his profits if he wants to—but you keep yours. Particularly should advertising be thrown overboard when business is a little slack.

Put your prices high, but forget about quality. Perhaps some of your customers will object to this, but you should worry. There are lots more.

Be surly. This rule should apply to both employes and customers. It is a mark of manliness to show everyone that you are afraid of no one. Bawl your employes out in public and whenever possible be discourteous to customers. Then everyone will say: "Isn't he a whiz!"

To give credit to anyone asking for it. And don't be in a hurry for the money. Your customers need it just as badly as you do.

Always be behind in your payments. What's the object of taking the 2 per cent discount when you can get 3 per cent at the bank. Never let anyone bully you into paying your bills. Remember, they need the business.

Don't go to conventions. What's the use of sitting around a stuffy hotel, listening to a bunch of windbags. Besides, it costs money.

Never exhibit your product. These various exhibits and shows are getting too thick. Nobody attends them anyway except the exhibitors, and you can't sell to your competitor. Why pay a lot of money just to see a lot of people walk by a booth?

Never take inventory. You have a pretty fair idea how you stand anway. Why go to all that bother?—(The Builders Bulletin, St. Louis.)

MORE BUILDERS WARNED ON SUBJECT OF CREDIT

Advised to Investigate Fully Ability to Pay of Promoters Who Would Build

Just recently the Credit Association of the Building Trades in New York City warned its members to use extreme caution in dealing with corporations or individuals who refuse information as to their ability to meet payments. The reason given for the warning at this time is the existing intense competition which has arisen as the result of declining volume of certain classes of construction. It appears that in the endeavor to obtain contracts in order to hold their organization intact a number of contractors and sub-contractors have been lax in determining the financial status of operations before beginning work. The result of this lack of foresight has proven disastrous for the builders concerned according to the statement of the credit association. Speculators have been offering building contracts on a basis of 50 per cent cash and the balance in long-term notes, but, continues the statement, the old line contractors under no circumstances will accept these terms. Some speculators, however, have been able to secure credit from sub-contractors and material men on the strength of a belief that the operation would be a success from a selling viewpoint, with the result that several sub-contractors and material men have found themselves on the wrong side of several deals.

When this type of building operation finally meets with financial collapse the filing of liens only means the foreclosure of the mortgage or mortgages and the wiping out of all creditors, according to the statement of the credit association.

Also included was a remark that sub-contractors and material men who frequently appear in the list of those filing mechanics' liens, are injuring their credit with recognized general contractors and architects because several large failures are bound to place them in financial difficulties.

PRESENT ONE COULD BE USED TO BETTER ADVANTAGE IN SOME INSTANCES

Too Much Time Now of No Avail to the Construction Industry As Matters Now Stand

GEORGE A. RICKER, Manager Educational Bureau, Portland Cement Association

There is some talk of revising the calendar but, regardless of the merits of the thing, there is a significant group of industries which feels that a little better use of the present calendar is in order.

The three winter months, December, January and February, are very nearly unused by prospective builders. Perhaps the construction industry is itself partly to blame, but the fact remains that there exists a popular myth that winter building is neither practicable nor profitable.

Hence, the construction business is forced to mark time during a quarter of the year. As it suffers, every other phase of industry suffers, for the building industry is basic. Prosperity and construction are complimentary.

Attaching Insert to forms with clips provided for the purpose.

Removing rope which protects plastic fill.

IT CUTS... ERECTION COSTS

THE Bayley-Springfield Steel Window Insert, developed by an organization with 48 years of experience in iron work and the fabrication of steel windows and doors is an outstanding improvement over the old way of casting grooves in concrete jambs and heads in which to place steel windows.

It Simplifies and Hastens Erection — and Reduces Costs . . .

— because it saves lumber, cement and other materials —

— because it saves sawing, chamfering, nailing and removing strips and clearing concrete grooves —

— because it saves wedging windows, erecting scaffolding and cleaning ventilator contacts —

— because it saves pointing. And, further, it permits installation in all kinds of weather, promotes permanent tightness and makes possible dealing with operations of known cost when preparing estimates.

The architect who specifies Bayley-Springfield Steel Window Inserts gets better and more certain results, the contractor increases his profit on the job, and the owner has no recurrent repair bills to pay.
